29800. Mr. O'KELLY.—Do you know what the effect of this creamery system has been on calves?—I have heard very bad. I used to buy Limerick calves before the creameries, but not since.

29801. That is because they are fed on separated milk?—So I am told. There is no calf like the calf reared on milk. The chief industry in this Tobercurry district is the production of milk and butter and young store cattle and pigs. To keep this industry intact or to develop it it is absolutely necessary that the grass lands in the district should be kept intact—(1) To provide a home market for the stores produced. (2) To enable small farmers who have capital enough to send out for the summer's grass their surplus young cattle and milch cows, on which, at the present prices of grazing they make very substantial profits. The moist, mild climate of this district suits cattle well, and where the land is in heart the grass is always growing. It was growing here so fast in last January and February that I stopped hay to a large lot of out-liers, leaving them on the grass alone. But my land is in heart, and in that respect differs from all the land that I know of in this part of the country.

29802. Mr. SUTHERLAND.—What put it in heart?—Cake-feeding for thirty years.

29803. I noticed elsewhere you said you cultivated the land, and put it in heart?—Not all—only fifty or sixty acres.

29804. Of course, we all know land that has been lying fallow cultivation for a year will put it in heart?—Yes.

29805. So that the land that is a long time lying fallow loses heart?—You call fallow grass. It cannot support cattle without help without deteriorating. It is the idea in this country it grows richer every year. Put feeding stuff on the land, and even sheep on the land, feeding them, and you will have the benefit of it. If you even put a few handfulls of the cake on the grass you will see the benefit of it. Cotton cake is the best, and I have used all sorts of cakes. Cake is the most fertilising.

29806. Mr. SUTHERLAND.—On page 4 of your memorandum you say—"When I first purchased the Doobeg property I had to break up and till a good deal of it partly to level the surface, and also to get it into good heart." You got it into good heart by tilling it?—It was in useless ridges.

29807. In one case you put it in heart by leaving it untilled, and the other by tilling it?—By tilling it. Portion I tilled had been burned. When I first purchased the Doobeg property I had to break up and till a good deal of it, partly to level the surface, and also to get it into good heart; but for the last twenty years I have had no tillage, because I have found that land pays better in grass than in tillage, and of course all the small farmers in the district have found the same. In my own immediate district they broke it into con-acre. Much of the land in this district could be improved by suitable reclamation, and I would suggest that employment might be provided in this way for the poorer agricultural population for many years to come if the Congested Districts Board were able to adopt this practice. Great employment and great benefit to the land of the district would also result from large drainage schemes, especially lowering portions of the Owenmore River and some of its tributaries. If the Royal Commissioners could find time to visit Wellmount (Mr. Robinson's place) and Old Rock (Major Charles Boyle's place) they would see good examples of judicious reclamation.

29808. Mr. KAVANAGH.—Can you explain what you mean by burning it?—By burning the skin off it.

29809. Sir JOHN COLOMB.—To make the land burn?—Yes, the best part is burned.

29810. Sir FRANCIS MOWATT.—Why do they take the skin off it?—To force the crops.

29811. Most Rev. Dr. O'DONNELL.—The ashes are supposed to be manure?—Yes.

29812. Sir FRANCIS MOWATT.—Would you mind explaining a little more what you mean exactly by burning—do they burn the grass?—There are fires lit, and the skin is burned into ashes, and that ashes is spread——

29813. Do they spread it over the surface of the ground?—Yes.

29814. Sir JOHN COLOMB.—They collect it in heaps first?—Yes.

29815. Most Rev. Dr. O'DONNELL.—Is it clay soil?—I am talking of clay soil.

29816. Is clay soil burned in that way?—Not so much lately. It is gone out of fashion.

29817. Will clay burn?—It will burn into beautiful red ashes. I have seen it in heaps to the height of this room.

29818. Mr. KAVANAGH.—Do they top-dress?—Yes.

29819. With the ashes?—Yes.

29820. That deteriorates the land?—Oh, tremendously. The best agriculturists state that it could not be recovered for fifty years.

29821. Mr. SUTHERLAND.—What damages it?—The surface is damaged.

Sir JOHN COLOMB.—The surface is removed for the purpose of tilling and scattering the ashes on what was the full surface, and turns the land valueless.

Sir FRANCIS MOWATT.—It forces one crop and practically leaves the soil barren.

29822. Mr. KAVANAGH.—Would you get a very good crop in that way?—Sometimes tremendous.

29823. Sir FRANCIS MOWATT.—You described how you got seventy-five tons of mangels—would it do that by burning?—That was with a forced crop of manure. I stall fed at that time.

29824. Sir JOHN COLOMB.—You would not expect to be able to get much crop from land that was burned for a couple of generations?—No. I know it is a ruinous system.

29825. How does this land happen to be burned?—It was let by the agent in this country of an absentee landlord for con-acre.

29826. CHAIRMAN.—It is burned first and then is it ploughed after that?—It is used for oats, sometimes for potatoes, chiefly oat crop.

29827. How long after the burning is it sown?—Immediately.

29828. Then you put the ashes on the top of where you sow?—Yes. I have never burned land, but I have seen it done often. It has gone out of fashion.

29829. Sir JOHN COLOMB.—It is rather a good thing it has gone out of fashion?—Oh, yes; the most ruinous thing that ever was done to land, I believe.

29830. Sir FRANCIS MOWATT.—You say:—"For the last twenty years I have had no tillage because I have found that land pays better in grass than in tillage, and of course all the small farmers in the district have found the same." As the result of passing from tillage to grass you are enabled to do without a certain amount of labour?—Less labour.

29831. Most Rev. Dr. O'DONNELL.—Has the price of labour gone up very much?—It has.

29832. By how much in the last twenty or thirty years?—By a third.

Apr. 19, 1907.

Mr. Charles Phibbs.

29833. Mr. SUTHERLAND.—When did you see burning last?—I do not think I saw it for the last ten years or twelve years or fifteen years.

29834. CHAIRMAN.—When you talk about land paying better in grass than tillage had you in your mind the same kind of produce in both—do you mean to say that when you started cattle rearing with tillage that you found it paid better to rear cattle without tillage?—I finish cattle.

29835. Did you in both cases? Did you till as a factor in your cattle trade or till merely for cereals?—As a factor in the cattle finishing.

29836. The cattle in both cases were your produce?—I never sold a shilling's worth of produce.

29837. So that when you talked of tillage you did not mean tillage in the sense we understand it in England—tillage for the purpose of selling?—No.

29838. It was tillage merely to grow things, particularly green crops, for feeding cattle?—Yes.

29839. You found that did not pay as well as feeding the cattle on the grass?—Yes, with the help of cake, dried grains, and all sorts of feeding stuffs.

Sir JOHN COLOMB.—You surface treat the grass land in order to keep it in heart.

29840. CHAIRMAN.—You have made an outlay in the shape of cake of different kinds, because if you did not put it into the land you would not get much out of it?—No. The land would not rear cattle otherwise without deteriorating it.

29841. That is not a common practice in this country?—Very uncommon.

29842. Sir FRANCIS MOWATT.—When you say you were tilling for the purpose of feeding cattle, that means, I suppose, stall-feeding or in-feeding them?—Stall-feeding them mostly.

29843. Do you keep them and stall-feed them, fattening until ready for market?—Yes.

29844. Did you sell them in England?—Yes, in Glasgow and Liverpool, and in Edinburgh.

29845. You fatten them straight up to the time they are ready for market?—Yes.

29846. CHAIRMAN.—They do not pay you as well as stores you now don't fatten?—Some of them I fatten for Dublin and other markets.

29847. Can you fatten without tilling?—Oh, lots. Yes, on the grass.

29848. With cake?—Yes.

29849. Do you find they take longer to fatten now than they used? Do you sell them earlier nowadays?—One system is from November to May, which is in-feeding, stall-feeding.

29850. Do you still have those heavy beasts selling in this season?—I sold two-year-olds without a broad tooth in Liverpool before now. I bought them in July as yearlings and sold them the following April.

29851. Sir FRANCIS MOWATT.—Do you say that never paid you?—The best that ever paid me. I sold them double the size and weight I bought them at, and three times the price.

29852. CHAIRMAN.—What sort of price?—Five pounds ten for a yearling, and I got nineteen pounds for them in Liverpool as two-year-olds without a broad tooth.

29853. What can you do in these days of cake with grass?—I have very good prices this last summer.

29854. Two-year-olds?—Generally. I now fatten barren cows after rearing a calf. I sold yearlings in Dublin cattle market this year.

29855. Could you sell two-year-olds in the month of April now which had been fattened on grass lands with cake?—You would not have them fit here at all in April.

29856. So that you would have to wait until the following September?—No, July.

29857. Do you take four or five months longer than you did?—You have them for a different time and season. If you were fattening in winter you would have them in April.

29858. If you bought a yearling in October what would you do with him now?—If he is a good beast I would feed him highly and send him as a forward store to England in September or October following.

29859. You would not do the same with him as in the other days?—With some of them. I sold them in Dublin market last August and September.

29860. What age?—About a year and fourteen months.

29861. Fit to kill?—Were killed, sir, sold by weight. The great bulk of them were small ones and fattened rapidly. They were not growers.

29862. Is it more profitable to sell fast or slow?—The earlier you can sell them the better. There is always a demand for young stock within three years old.

29863. What sort of price have you got as yearlings?—About eleven pounds ten. I brought over forty to Wellington in October, and they went from eleven pounds ten to eleven pounds five.

29864. Sir FRANCIS MOWATT.—A yearling is about fifteen months?—Some of them fifteen, some of them eighteen—stirks.

29865. Mr. KAVANAGH.—You must have done them very well?—They were.

29866. Sir JOHN COLOMB.—And you say you got eleven pounds ten for them in the Wellington market?—That is the case.

29867. May I ask you with regard to these stores, were they cross bred or Polled Angus?—Those were all by a Hereford bull, some out of Angus and mongrels from Connemara.

29868. CHAIRMAN.—If it is possible to sell animals at a year old and obtain such a price as you seem to get, why then should there be such disasters, and why could not the small people do it also?—Those cattle were all reared on the dams to begin with for eight or nine months.

29869. You bred them yourself?—Bred them all myself.

29870. Is there any reason why the small man would not do that?—They would not stand beside those cattle.

29871. How?—They would not compare with the cattle I sell at the price.

29872. I am sure pride of ownership must be great, but will you tell me why?—I only want to tell your Lordship the exact plain facts.

29873. Sir JOHN COLOMB.—You have a good range for the cattle and the small holder has not?—That is so.

29874. Is not that a very material factor in the whole thing?—Yes.

29875. To bring cattle to maturity they require a large range?—Yes.

29876. CHAIRMAN.—You breed them on your property; then you say it stands by the dam for nine months; then you proceed to feed it with cake and other things until it is fifteen months, when you obtain a very large price?—I got better prices than last year.

29877. I mean £11 10*s.* or whatever it is. Now, why could not the small man do that? He has a cow, and there is no reason particularly I can see that the calf could not stand by the dam?—It would be very hard to explain. These calves of mine are out of small Connemara dams. I bought their dams for five or six or seven pounds (sterling).

29878. Is not that all the more reason why the small man could do it?—He would not have such cows at all.

29879. The breed of the cow would be worse?—No. If they were out of their big cows I would get more, but the big cows would not suit my work. They would be too delicate.

29880. In your opinion, in order to let the small man do what you have been able to do he would have to change the breed of his cow?—No.

29881. Just explain exactly?—He has not the area, the room. He would not be able to cake feed them. He has not change of grass and room to run on.

29882. How much grass is wanted for each cow and calf? What do you call a fair allowance of grass for a cow and calf?—It depends on the grass.

29883. Take your own grass?—Oh, my land; an acre will feed more than a cow and a calf.

29884. Is there any reason if a smaller man was in possession of a similar amount he should not feed a cow and calf?—No, he could not.

29885. Why not?—He has not enough of grass together, and he does not feed his land as I do.

29886. Sir JOHN COLOMB.—You could not keep it on that acre?—I am talking in a general way. The calf is weaned, and then there is the fresh farm clean for the calf.

29887. A different area with a large range of land for the calf?—Yes. It is a very difficult thing breeding, from the keeping of bulls to the calf and stirk and every other thing.

29888. Mr. SUTHERLAND.—A certain amount of area for the cow and calf to promenade in, I suppose?—Yes.

29889. Sir JOHN COLOMB.—Especially for the calf after it is weaned?—Yes, fresh grass.

29890. Is it not rather also a question of capital. The small man is obliged to make a profit from day to day on the milk, and therefore he cannot rear on the dam?—That is in it too, want of capital.

29891. The small man must make from day to day what he can. Therefore he sells the produce, milk and butter, to keep going. He could not afford the profit on a small holding?—No.

29892. CHAIRMAN.—Have you ever seen a small man attempt to do what you have done?—No.

29893. Sir JOHN COLOMB.—Is it not rather the conditions of the holding?—Yes, the cows pay very largely.

29894. The small man has to sell his milk to the creamery. He could not afford to use his milk on a calf which might die?—No, and if she had two calves it might not suit him.

29895. Sir FRANCIS MOWATT.—Assuming that a certain treatment of the cow and calf enables him to make a larger profit at the end of the eighteen months than he could make by selling his milk and subsequently selling an indifferent calf, would he not do that which paid him best?—I think so.

20896. Assuming he made a pound more by fattening his eighteen months' calf than by selling his milk and only having an indifferent calf?—The milk and calf pay the small man best.

29897. Do you mean to say he makes even more by his milk and bad calf?—They mainly rear good calves.

29898. That is the advantage?—They are not like the calves reared naturally.

29899. Mr. O'KELLY.—You got nineteen pounds for cattle in Liverpool?—I got as much as thirty-three.

29900. Was that due to forcing the animal into condition?—I don't know what you mean. They were yearlings, for instance.

29901. What produces black quarter?—It is very mysterious, and they have never yet made it out. Anything that suddenly forces any animal into flesh may cause it.

29902. Does forcing produce black quarter?—Yes. Injudicious forcing.

29903. You took the risk?—Yes, but I never had a case of that kind in stall-feds. Another thing is if you feed a calf from the very first all along the line he is not as subject to it as the late well-fed calf. I see it very much in yearlings. The one that suddenly begins to do well gets struck. In fact, they are struck on the grass without any extra feeding at all, and in the sheds. In the month of January I had to put them out on a new farm. Much of the land in this district could be much improved by suitable reclamation, and I would suggest that employment might be provided in this way for the poorer agricultural population for many years to come if the Congested Districts Board were able to adopt this practice. Great employment and great benefit to the land of the district would also result from large drainage schemes, especially lowering portions of the Owenmore River and some of its tributaries. If the Royal Commissioners could find time to visit Wellmount (Mr. Robinson's place), and Old Rock (Major Chas. Boyle's place), they would see good examples of judicious reclamation. My own property at Doobeg is also an example of the benefits arising from treating land well. My Landed Estates Court conveyance purported to give me an indefeasible Parliamentary title, and relying on this I proceeded to fence, drain, reclaim, and improve the estate generally. I also made suitable roads for my own and the tenants' use (one being through a deep bog), and built a substantial dwellinghouse, out-offices, and gate-lodge. In a few years I spent over £6,000 in these ways, of which more than two-thirds was for land improvements, which gave large employment when it was much wanted. Since I came to reside there I have also been a buyer from the country round of their produce in hay, oats, cattle, etc.

29904. Mr. O'KELLY.—You say your Landed Estates Court conveyance gave you an indefeasible Parliamentary title; do you mean by that that you felt secure that no compulsion would be ever applied to you to give up any of the land?—I never thought of such a thing as that, but a Landed Estates Court title is a very good one. It is for cash down.

29905. Assuming that in your district there was a good deal of congestion contiguous to grass lands in your possession, would you think your Parliamentary title would prevent those lands from being taken from you?—All I spent since on them on the faith of that title.

29906. Do you mean that your indefeasible Parliamentary title would exempt you from the operation of compulsion?—No; it is the spending of money on them, and the labouring on them.

29907. You also say you made suitable roads for your tenants' use. Was that money expended out of your own capital?—Out of my own pocket.

29907A. Or borrowed from the Board of Works?—Not a shilling of it.

29908. Was this a free gift to your tenants?—The same road was for my own use as well as theirs. There was no way of getting on the townland at all.

29909. You could not get into the house before this road was built?—No. It did not bring me to my house at all.

29910. Where did it bring you to?—Right through my own property.

29911. It was built for your own convenience as well as for your tenants?—Quite so.

29912. Were you recouped by the tenants for your expenditure in any way?—I was not.

29913. Sir JOHN COLOMB.—I understand you gave £11,000 for the estate, and in a few years you spent £6,000?—Yes.

29914. Out of your own pocket?—Yes.

29915. The money went into the pockets of labour?—Labour all around me. There was no cart or horse on the townland when I purchased it. There is not one without a donkey-cart now at least.

29916. All you want to say is, having, on your Parliamentary title, spent all this money, you consider that if for any State purpose you are to be purchased, all these matters should be taken into consideration, and you cannot be expected to lose a penny over the transaction?—Yes. From this outlay and employment the land in my hands has trebled in value in the last thirty years, and can now carry three times the number of stock in good condition it was able to keep alive in 1877. It keeps improving still under my present system of feeding sheep and cattle with cakes and other foods, and with hay and oats purchased here, and cakes and other concentrated foods. I also work a hill farm of eighty-five statute acres, a couple of miles from Doobeg. It is wholly unsuitable for tillage, but is excellent pasture. I use it as a stock farm, for a bull, with cows and heifers. The profits, and therefore the circumstances of the small farmers would be much improved if they could be induced to breed their stock from better animals, or could be prevented from breeding from inferior ones. I have kept, at various times, Aberdeen Angus, Shorthorn, Hereford, and Galloway bulls which were always at their service for a nominal fee of 2*s.* 6*d.*, but they made little use of them. I have heard that in some Continental countries a farmer is forbidden by law from keeping any animals for service unless they are certificated by a Government Department. Some such system might be advantageously introduced here. In some districts a stud farm under Government control and expert officials, would be valuable. Under local control it would be worthless. Good boars are also essential. Good pure-bred bulls in the congested areas would produce cattle that would be acceptable in the English and Scotch markets.

29917. Mr. O'KELLY.—Has the Department of Agriculture a County Committee in Sligo?—Yes.

29918. Has the Department done anything in the County Sligo?—Not in my district, except that there are premium bulls.

29919. Would not you think a work of this kind would fall naturally on the Department of Agriculture?—I presume so.

29920. Because that is what the Department of Agriculture is for; is not that so?—Yes.

29921. And so far as your knowledge goes the Department of Agriculture has done nothing in this direction?—I think there are premium bulls and sires—a few thoroughbred horses.

Apr. 19, 1907.

Mr. Charles Phibbs.

29922. You speak about a stud farm under Government control, and say that under local control it would be worthless. What reasons have you for advancing that view?—Many reasons. There is not skill enough.

29923. What local control have you in your mind? There is not skill enough in the county for the selection of sires.

29924. When you speak of local control have you in your mind some local body?—No. Any local body that would be formed for the purpose would not be the best.

29925. Why would Government control be better?—Because there would be skilled managers.

29926. Don't you think a local body would have those skilled managers also?—Perhaps so, but I don't think it would be the same as a Government body.

29927. You have a Committee of Agriculture in this county. That Committee of Agriculture might be entrusted with the work. That Committee of Agriculture will get its grants from the Government, and will employ skilled assistance?—Perhaps so.

29928. Would not that obviate your objections to local control?—I suppose it would.

29929. In any event don't you think the advice and assistance of local men such as those selected under the Local Government Act would be of considerable assistance to those who would have knowledge of the technique of the work?—Perhaps they would.

29930. That being so you have no objection to local control?—Not if proper men were employed.

29931. Let me assume that the men the Government employ are the same as the local body would employ?—If that were so——

29932. If that were so you would have no objection to local control. But you see some advantage in having the co-operation and advice of local men well versed in farming matters?—There are some very skilful cattle men in the county, but as a rule they are not so.

29933 You mean to suggest that they don't know their own business?—They are not skilled in breeding.

29934. I would like to find out what great advantages you have in having Government control, and what great objections there are to local control?—Want of knowledge and training of those who would be the local controllers. They have not themselves the skilled knowledge and training.

29935. And the Government have?—The Government system is by examination.

29936. Sir JOHN COLOMB.—Is this your meaning: you were not so much concerned as to using the word Government as you were in the establishment of a staff and that the whole carrying on of the business should be done by experts?—Yes.

29937. Mr. O'KELLY.—I heard a witness state yesterday that from his experience that a number of the officials of the Estates Commission did not know their business?—The oats and potatoes grown in this district are the worst in quality I have ever seen or used. I impute this to bad cultivation and also to the climate being unsuitable for tillage; also to want of occasional change of seed. As regards migration schemes, I think they will be difficult to carry out successfully or at all. Most farmers dislike leaving the neighbourhood in which, and the relatives and friends amongst whom, they have always lived. Again, if they get a better holding elsewhere, and the land is materially different in quality and character from that which they have left, they would require to be instructed how to work it, and would often require to be provided with some capital also. Further, there is the serious fact that they will probably be regarded as intruders in their new neighbourhood, and be treated with hostility by the people there.

29938. Of course no one ever suggested that you could migrate a tenant to a holding without capital, no matter how it was provided for him; whether in the shape of a loan or in what he had himself?—I think I have heard it suggested, but it is ridiculous.

29939. Of course it is. It is absurd?—A shopkeeper would hardly do if you put him into a house, if he had no capital or credit.

29940. I would like to know where it was suggested?—I say the absence of suggestions as to capital being provided.

29941. Further, there is a serious fact that they will probably be regarded as intruders in their new neighbourhood, and be treated with hostility by the people there. Have you any instance in your mind where that is the case?—I know that that is the general feeling.

29942. Do you know the causes that give rise to that feeling?—To get it for themselves. There is a selfish cause under it all.

29943. I suppose you have a certain estate in view where that feeling was given expression to?—I have.

29944. What is the character of the holdings in that particular estate that you have in your mind?—They have been all changed lately. There is a great deal of land added on in the case I am thinking of.

29945. Is it on this particular estate that the intrusion of strangers is resented?—It would have been resented if it had been attempted.

29946. It is purely hypothetical on your part?—They were asked—"Would you go," and they would not go.

29947. Do you think I would be describing the situation if I was to say that the small occupiers on estates of the character you have in your mind would resent the migration of tenants from a distance simply because their position is no better than the position of those whom it is propsed to migrate, and that they would have no objection to the migration of tenants if their own necessities were first provided for, and would have no objection to any surplus land left over being given to migrants?—By no means. They think they have the best right to the land.

29948. Have these people large or small farms?—Medium size.

29949. I might put it in another way. Do you think the settlement of the problem of congestion proceeds on right lines if these were the lines: You have large grazing farms contiguous to a large area of congestion. The tenants on the congested portion feel that they ought to get the land, and that it is a necessity to them. A Board comes along and divides up the grazing farms among people from a distance, stereotyping the congested area. Don't you think that the better way would be to enlarge the holdings in this area of congestion from the untenanted area in the first instance?—If it could be done.

29950. Why could not it be done?—If the land is to be got.

29951. Suppose all the grazing land contiguous to this area of congestion is handed over to migrants, don't you stereotype the congestion of this congested area for all time, and the only hope of relieving the occupiers is to migrate them in turn somewhere else?—It looks like it.

29952. Which of the two systems would you prefer?—You are talking of general places that I know nothing about.

29953. I only want to get your view. There is nothing controversial about it at all?—If there was a good deal of land to be divided on a certain estate, and the tenants on another estate much more congested were asked would they go to that land if some remained that they know nothing about, they would not go—they would not risk it.

29954. Simply because in the view of the people in the neighbourhood they were going to displace them?—I did not consider in the estate where the large lot of land was that there was great congestion.

29955. There was some?—I think there was.

29956. Was there any attempt made to provide for the necessity of the same?—There was a good deal of this land to divide.

29957. Mr. KAVANAGH.—More than was required to relieve congestion?—It would raise them beyond £10, I believe. I am not managing the estates. I am just giving you an outsider's view.

29958. I thought Mr. O'Kelly was asking you a particular case?—It was only what I as an outsider could see.

Most Rev. Dr. O'DONNELL.—The difficulty was no matter how much land there was, there might not have been power to enlarge the uneconomic holdings on the border. If there was no such power these uneconomic holders on the verge would naturally resist the incoming of people from a distance. That I take to be Mr. O'Kelly's point.

29960. Mr. O'KELLY.—Quite so?—As regards a general enlargement of small holdings to the so called "economic" standard of a Poor Law rating of about £10 each (as advocated by Mr. Henry Doran, Mr. Commissioner Finucane, and others),

think that, apart from the disastrous consequences of abolishing the class of large graziers, or greatly diminishing their numbers, it would be an unfortunate thing to reduce the whole country to a sort of dead level of holdings just sufficient to enable their occupants to barely keep their heads above water. So far, however, as such a policy may be carried out the State should provide these small men with loans or grants sufficient to enable them to work their new land; otherwise they will meadow, or con-acre, or sub-let it, and the land in a few years will be run out, and the tenants become unable to pay their purchase annuities. Of course, I think that emigration, State-aided, if it was more popular, might be tried.

29961. Sir JOHN COLOMB.—All you mean by that is that the alternative should be offered to everybody who chose to accept it, of the emigration of a whole family?—Yes.

29962. Mr. O'KELLY.—It would be an unfortunate thing, you say, to reduce the whole country to a sort of dead level of holdings. What would be unfortunate about having economic holdings in the country?—I think you can understand that. Do you want to destroy all competition and level the country. I think it would be very unfortunate for the people themselves. It is only my poor opinion.

29963. I daresay you know it would be impossible in any case?—I suppose it would be possible if the millions were handed out.

29964. Don't you think anything almost would be better than the present condition of a great number of people in the congested area?—That is why I say emigration. I would not advocate it if there was any practical scheme for relieving congestion possible. It should not be forgotten that the sons of small landlords and great numbers of professional people resort to emigration as the best means of getting on in life. Therefore I think that the same means should not be kept from the small farmers. I would not put on any pressure, but if whole families were willing to emigrate the State should give them all assistance to do so.

29965. Sir JOHN COLOMB.—You know of your own knowledge in many countries of the world where families are increasing, and there are not means for all to get on at home, and the sons and daughters have to go to the uttermost parts of the world to try to get a living?—That is what I mean.

29966. Mr. KAVANAGH.—Is not emigration going on fast enough already?—I believe faster. They are rushing literally at present to America.

29967. Would you actually assist to increase it by State money?—There are tracts and tracts of land in Canada and Australia.

29968. We are talking about this country?—But it is the strong people who are going.

29969. Sir JOHN COLOMB.—What you mean is that it is the young and strong who are leaving, and that is disastrous, but that if they were to bring with them the old and weak the State might very properly give aid?—Yes.

29970. But you deplore the young and strong going?—Yes.

29971. And the emigration you mean is where there is a family and sons and daughters in America the State might fairly give assistance to the mothers and fathers to join them if they wished?—Yes.

29972. In no sense to urge them or compel them?—That is what I mean.

29973. Mr. O'KELLY.—You deplore the young and strong going?—Yes.

29974. Would you recommend the old and weak to go?—I speak of whole families—if the whole family wished to emigrate to Canada or the States.

29975. Sir JOHN COLOMB.—As was done in 1883 or 1884?—Yes. There are large areas of untenanted land in the County Sligo which, I believe, would be willingly sold by the owners to either the Estates Commissioners or the Congested Districts Board for purposes of migration or enlargement of holdings or reinstatement of evicted tenants, if the owners were offered a fair price. There is no need to grant compulsory powers to those bodies unless Parliament deliberately wants to force people to sell their property for much less than it is worth. Mr. Doran has recognised in his evidence that if land is wanted a fair price must be paid for it to everyone, whether owner or tenant, who possesses any valuable interest in it. Mr. Finucane contends that if the owner is also the occupier he should be paid nothing for the occupation interest, but in every part of Ireland the owner could split up such lands into suitable holdings, put fair rents on them, and offer the occupation of them for sale subject to those rents, and he would get a large fine or input in addition to the rent. In face of this fact how could owners be expected to think it fair that they should be asked to sell the land without being paid for both the occupation interest and the fee? When a tenant becomes a purchaser under the Purchase Acts he becomes owner and occupier of his holding. Would Mr. Finucane contend that the valuable occupation interest which he had as tenant was thereby wiped out, and would any tenant be willing to be bought out on such an assumption? For example, in 1899 I sold a townland to the tenants, except six statute acres, in my own hands. For the tenanted portion I got twenty-five years' purchase of my then rents. For the six statute acres I got £1,000, there being a valuable limestone quarry on it. What might I expect to get for the land if it was being taken by the Congested Districts Board?

29976. Most Rev. Dr. O'DONNELL.—Would there be some of the amount that you got given for the limestone quarry?—It was given in consideration of the limestone quarry being there.

29977. How would that prove you would not get a fair price under compulsion?—That would never be calculated.

29978. Who knows that?—It is not the rule.

29979. Is it not the fact that land taken compulsorily brings more than land taken voluntarily?—Railways pay more.

29980. Why then should you dread that under a system of compulsion prices would be lower than under a voluntary arrangement?—When taken for railways it is not in the same way. It is taken for a public purpose.

29981. This would be for a great public purpose, too?—Yes, but it is taken from one man to give to another man. In the case of the railways the very man from whom it is taken will probably benefit greatly himself by the railway.

29982. Sir JOHN COLOMB.—In the case of a railway the land is taken compulsorily under an Act of Parliament, but the Act of Parliament does not fix the price. That is done compulsorily by an arbitrator—is not that so?—Yes.

29983. Is your bed-rock of objection this, that under compulsion the two sides are the owner and the State. The State as the purchaser wants to get this land as cheaply as it can, and what you object to is that the buyer should fix the price?—Quite so.

29984. Mr. O'KELLY.—You admit that congestion is a great evil?—Yes.

29985. Parliament admits it also?—Yes.

29986. The policy of the two great parties in the State for years has been to put an end to it?—I suppose so.

29987. Parliament would not come to that decision unless it was convinced in the public interest of the necessity of putting an end to it?—I suppose so.

29988. Admitting that congestion is a great evil, if they found it could not be put an end to without having recourse to compulsion, don't you think it would be unworthy of Parliament not to have recourse to compulsion?—I think nothing can justify even under these circumstances compulsion.

29989. You think nothing can justify compulsion under the circumstances?—No.

29990. We have compulsion already in regard to the railways?—Yes.

29991. Is not it more desirable, as I put it yesterday, that people should live than that they should travel fast?—I cannot see it. I cannot see that I have the right to take any man's land because he has more than I have.

29992. You are aware of the Labourers' Act that passed last year?—Yes.

29993. The element of compulsion was introduced there?—Yes.

29994. You can provide an allotment in England under the Allotments Act by compulsion?—I believe so

Apr. 19, 1907.
Mr. Charles Phibbs.

29995. What is morally wrong in compulsion in Ireland whilst we have the English precedent?—Those are all small holdings.

29996. The principle of compulsion is there all the same?—It is in railways, too.

29997. Land can be compulsorily sold by the Land Judge in Dublin?—For debt.

29998. Have not you hosts of precedents for the principle of compulsion; you are aware that in Australia at present some of the States are resuming possession of the land that was granted to settlers?—That is a new country, and no one has got land there without notice that it may be taken from him.

29999. Are not you aware that large grass ranches in Australia are now being compulsorily resumed by many of the States for the purpose of closer settlement and attracting settlers?—Yes. The occupiers were aware of that all along. They did not pay hard cash for them in the Landed Estates Court.

30000. The principle of compulsion is there?—Yes.

30001. What is the bed-rock of your objection to the principle of compulsion—is it that there is no need to grant compulsory powers to those bodies unless Parliament deliberately wants to force people to sell property for much less than what it is worth?—Yes. That is my conclusion.

30002. Can you give us some reasons for arriving at that; why would Parliament want to do that; what was it you had in your mind when you said that Parliament wants to compel you to sell your property for less than it is worth?—I cannot make it any plainer.

30003. Have you any case in your mind to which that remark applies—would it apply to your property?—I believe it would if there was compulsion.

30004. Where compulsion is applied there is generally a higher price given?—I cannot see that.

30005. Did you ever have any dealings with railway companies acquiring land?—Yes, on a small scale.

30006. There was compulsion there?—That was a matter of course.

30007. Did you get a lower price than the land was worth?—They paid me very handsomely for the loss of rent, and they paid up for the occupation value.

30008. You had no reason to complain of compulsion there?—No.

30009. That is a case of taking land?—It is not the same.

30010. With what tribunal had you to deal?—I did not put it past their own arbitrator. I knew the price was fair.

30011. Suppose you had a similar tribunal dealing with land would you have any more cause to apprehend you would be treated badly?—I would.

30012. Why?—Because I know it is impossible for valuers fairly to estimate my loss.

30013. Would not you be able to show them how much you lose. If you represented the actual state of things they would be reasonable?—I cannot answer that any more.

30014. I notice further on you say that in every part of Ireland the owner could split up such lands into suitable holdings, put fair rents on them, and offer the occupation of them for sale. Did you read the last report of the Estates Commissioners?—I think I did—my memory is not very good.

30015. Do you know that where this practice was attempted the Estates Commissioners refused to have anything to do with the properties?—I believe they did in one or two cases.

30016. Do you think it is consistent with the spirit of the Act of 1903 to do a thing of that kind?—I really could not say.

30017. Let us see how this practice would work out. You have a farm of one hundred acres in addition to occupied land. Instead of selling the unoccupied portion to the Estates Commissioners you propose to divide this one hundred acres among your tenants yourself in the first instance. Before you approach the Estates Commissioners you exact fines, say £9 or £10, for each of twenty lots of five acres each?—It is what has been done.

30018. That is what has been attempted. You exact ten years' purchase in the first instance. Then you get the tenants to buy under the Act of 1903 at a valuation of your own, say twenty-three years' purchase. Then you get the bonus of twelve per cent., representing three years' purchase; then you get a year's purchase for gold instead of stock, and then you get a year's purchase for clearing the title. By this device you bring up the price of land to thirty-eight years' purchase. Is that conforming to the spirit of the Act of 1903?—I don't suppose it would.

30019. Mr. KAVANAGH.—I am sure you would like to relieve congestion?—Indeed I would.

30020. You are apparently against migration. Can you suggest any other way of relieving it?—I am not public man at all enough to think of such a thing.

30021. You have it around here—you must have thought of the question. If you are opposed to migration what other scheme have you now?—I don't think there is much real congestion in the County Sligo.

30022. As a matter of fact there is. You would actually apply no relief to congestion rather than migration?—I cannot suggest.

30023. Yet you oppose migration?—I did not oppose it.

30024. I thought you did?—I did not; where the land is voluntarily sold, as I know, many landlords would sell it voluntarily at a fair price.

30025. If the principle of fair price is established you would have no objection to migration or compulsion?—Oh, compulsion I could not agree to.

30026. It is a matter of price?—I object to the principle.

30027. Still if you got the fair price you would waive the principle?—I could not waive the principle. If I have been a blacksmith or a merchant, and have made £500 by hard labour, and have bought land with it, why take that land from me?

30028. Mr. O'KELLY.—You are aware that one of the principal reasons for the passing of the Act of 1903 was to relieve congestion in the West? Was it?—It may have been. I never took that in.

30029. You may take it from me it was the object of the Act—to use Mr. Wyndham's words—to reach the poor people—the small people?—Yes, by making them owners.

30030. Suppose you adopted this proposal of yours to split up lands into suitable holdings, then according to the process described a while ago no one could get in on that one hundred acres except a man who could pay a fine?—Yes.

30031. You are aware that the very small people whom the Act was intended to reach could not afford to pay a fine?—The majority could not.

30032. Therefore if your plan were carried out one of the principal objects of the Act of 1903 would be defeated?—Why do you say my plan?

30033. Your suggestion?—I am only arguing as to the value of the land to the owner, and he has it in his power to do it.

30034. If he chooses to exercise that power he would defeat one of the principal objects of the Act of 1903?—That might be. As to a method of estimating a fair price, I could not agree to its being left to professional valuers. These gentlemen's valuations are mere opinions, which always lean in favour of the party by whom they are employed. Some method or standard should be found as nearly as possible of an automatic character for calculating the fair price. I agree generally with Mr. Boyd's proposal on this point—namely, that the poor law valuation of the land and buildings, *plus* one-third thereof, should be taken as the minimum income of the property, with an option to the owner to prove, by his books or other evidence, before a judicial tribunal that his net income during, say, five years preceding, was more than that minimum. The price should then be the sum which, if invested at 3½ per cent. interest, would produce that net income. It may be said that one and one third times the rating value would occasionally represent more than the net income that the land had yielded on an averarge of years; but I am confident there is very little land in the country which, if divided and sold subject to fair rents, would not produce between the fines and, say, twenty-three or twenty-four years' purchase of the rents a sum which, if invested at 3½ per cent. would not produce an income equal to one-and-one-third times its poor law valuation, no matter how it may have been previously used or worked.

30035. You refer to professional valuers?—Yes.

30036. Surely would not it be the function of such a body as the Estates Commissioners or the Congested Districts Board to make a valuation—would not they

stand impartially between the seller and buyer?—I don't think they could.

30037. Sir JOHN COLOMB.—They would be the buyer?—Yes.

30038. Would not it be like as if the buyer of a cow in the market was to dictate to the seller what should be the price?—Yes. That is what I think.

30039. On whom would you throw the responsibility?—On no one. On the valuation.

30040. Mr. O'KELLY.—With regard to the occupied portion of your land, would you be willing to accept your net income from the tenants on this land?—Yes.

30041. Suppose to-morrow you were negotiating with the tenants for a sale of your property, and said to them—"I am willing to take a sum which if invested at such a figure will give me my net income," would you have any objection to produce your rent books showing what your income and expenditure were over a period of five years?—None whatever.

Very Rev. CANON LOFTUS examined.

30042. Sir JOHN COLOMB.—I think you have been deputed to give evidence by the Bishop of Achonry?—Yes.

30043. Kindly tell the Commissioners what you wish to state?—I have during all my life, with the exception of the last ten or twelve years, been familiar with the Congested Districts. I was born in a congested district, and lived the earlier portion of my missionary career in a congested district, until I came to my present parish. I have been sixteen years in the congested districts of the parish, Killaber, which was exclusively Lord Dillon's property, which has now been sold. I therefore claim that I have some idea of what congestion means and of the necessity of relieving it. There is a general opinion that the entire province of Connaught should be placed under the Congested Districts Board, and the reason why it has been referred to, I think, is that the people in the non-scheduled districts hearing of and seeing the operations of the Congested Districts Board in their vicinity feel very much aggrieved that nothing was done for them, although their condition was very little better than that of the people in the scheduled districts. These people were excluded because certain larger holdings in the electoral division raised the average valuation per head of the population above the statutory limit. That explains why the general opinion is that the whole of Connaught might be brought under the operation of the Congested Districts Board. I have listened to the evidence here, and read a great deal of the evidence given before the Commission since it commenced its sittings, and in general respects I think that the evidence in other places was somewhat similar to that given here. But, in reference to this part of the country, there are two matters that I came here particularly instructed in. One of these is the drainage of the Owenmore River. Portion of the upper reaches is under the Congested Districts Board. Since I came to this part of the country, twelve years ago, I have been particularly interested in the Owenmore. I know it well. It is very fitful, and is subject to periodic fits of overflow, and when it overflows it does a tremendous lot of harm. It is very hard for any man, even the most skilled expert, who has not seen it himself to appreciate the amount of damage done by that river and the terrible scourge it is to the people along its banks. Its evil influence is felt for four or five miles on either side of the river in flood times. The great damage is done during the summer time when the great falls of rain occur and enormous damage is done. I remember about ten years ago we commenced to agitate about the drainage of the Owenmore. Colonel Cooper took a great interest in it, and Mr. Phibbs took an interest in it too, knowing the terrible injury done to the poor by that river. We had a correspondence with the Government and a deputation over to the House of Commons in reference to it. Colonel Cooper and others, including myself, were there. We were received very kindly by the President of the Board of Works at the time, who heard our story. I explained the difficulty of putting the matter under a district drainage board, as the poor people by themselves could not organise such a board or undergo the initial expense. General Sankey was Chairman of the Board of Works. I suggested sending one or two men to examine the place to see the minimum cost at which the drainage might be effected, and you would imagine I offered him a personal affront when I made that suggestion. He talked to me very roughly, and said he had no man to send down there and he would not send down. I thought it extraordinary on the part of an official to make the observations he did. There was a project to drain the Owenmore as a relief work in the bad times, 1847 and 1848, and there were surveys made of the river. These surveys were too elaborate, and the cost was so great that it fell through. Nothing has been done for it, but I have heard several times, from persons who were not professional gentlemen, but had great common sense, and who have examined the river and know its whole history and everything about it, that in their opinion an outlay of about £600 or £700 will be quite sufficient to keep the river at ordinary summer level every day of the year.

30044. Most Rev. Dr. O'DONNELL.—Where does it discharge its waters?—It starts at the foot of the historic Curlew mountains, near Kilfree junction. It is not very old when it commences to make itself felt, and when it comes down to the low waters it is terrible.

30045. What river does it fall into?—Ballysodare Bay.

30046. How many miles of agricultural land does it flood?—I should say about ten or twelve miles.

30047. In its upper reaches it passes through a congested area?—Yes, for a few miles in its upper reaches, near Gorteen. It rises near Kilfree, and is a small stream until it comes down four miles. Then it assumes formidable dimensions, and that is where all the damage is done.

30048. Is it your strong impression that little can be done for flooded land of that kind until the flooding is abated permanently?—It poisons the land, land that otherwise would be good for agricultural purposes, grazing and meadowing. When the flood comes down it is absolutely distressing to see the damage done by this river. On the occasion of great floods the hay is carried away, and the meadows are destroyed by the mud left in the subsoil. Sir Josslyn Gore Booth, as landlord of a great portion of the property, used always make a reduction in the rent on account of the floods on that property.

30049. The drainage of the river would materially improve the condition of the people?—Permanently, and at no great expense.

30050. The riparian owners would not object on the ground of fishery rights?—I don't think they would. The river is so sluggish, and the mud in the bottom is so silted by accumulated vegetable deposits, that very few fish go up there at all. Some do, but they are hardly worth catching.

30051. Did anybody in the locality move in the direction of having a drainage board formed?—They thought at the time that the Government would give a substantial grant for the purpose of draining the river, as they gave in the case of other rivers, and would give it at a reasonable rate of interest repayable over a reasonable term of years.

30052. Is it your suggestion to the Commission that for that long tract of country, part of which is congested, nothing can be done in the way of improvement until a scheme of drainage is promoted to prevent that flooding?—Very little can be done.

30053. Mr. KAVANAGH.—You think about £600 or £800 would do the work?—Yes. Everyone who knows the river knows that there are certain obstacles. Colonel Cooper used to say that the key of the whole situation was at Collooney. There is a rock there near the creamery, two miles up the river, and if there was a channel cut there it would greatly obviate the difficulty. Then there is an old eel weir that has been in disuse for a long time. I have no doubt if some practical steps were taken to carry out the drainage you would have the eel weir people, who never derive any advantage from it, getting up like a Jack-in-the-box and saying they were being damaged. That was done in my experience not long ago where there was an eel weir which never caught an eel, and some person suggested when the work was going to be done that the claim should be revived.

30054. How long has the flooding been going on?—From time immemorial.

Apr. 19, 1907.

Very Rev. Canon Loftus.

30055. Is it getting worse?—It must be, because each year brings its own deposits. It is very hard to graduate the difficulty in the river, because it is always accumulating. Once it commences it increases every year, and the river gets choked up by accumulated vegetable deposits.

30056. Sir JOHN COLOMB.—The flood comes from the higher ground, where it is a congested district?—Yes.

30057. And it floods the lower district, part of which at all events is not congested?—Yes. The part where it does most damage is not congested.

30058. The waters from the congested districts are turning economic holdings in the non-congested districts into uneconomic holdings owing to damage?—Certainly, as I saw from the very start, even up towards the source, the river commences to show itself, because the waters have not a free flow into the lower reaches of the river, and naturally enough this affects the upper portion of it.

30059. Mr. O'KELLY.—How many miles does it run through a scheduled area?—Two miles, but there are about eight or ten miles of a thickly-populated district on either side.

30060. Sir JOHN COLOMB.—You attribute extreme importance to this question?—Certainly.

30061. How many holdings do you consider might fairly be described as subject to this damage?—Immense damage has been caused in a large portion of the County Sligo through the periodic flooding of the Owenmore River. This river rises in Kilfree, in Boyle (No. 2) Rural District, and flows through the districts of Boyle (No. 2), Tobercurry, and Sligo, and enters the sea at Ballysodare. Several attempts have been made by the people affected by the flooding to have this river drained. About the year 1847, when the Government advanced money for relief works, a drainage district was formed for the purpose of the drainage of this river, and on that occasion complete plans, drawings, and specifications were prepared by Mr. St. Leger, County Surveyor in Sligo. He estimated that about 8,000 acres of land would be benefited, and that the cost of the drainage would be about £7,000. Before the work could be carried out the money advanced for relief works was expended in other parts of Ireland, and so the work was abandoned. About the year 1872 the Sligo Grand Jury interested themselves in the drainage, and they employed Mr. Jones, County Surveyor, to make an estimate of the drainage, but he estimated the area served by the drainage at 3,000 acres at a cost of £18,000. The drainage also fell through on this occasion owing to want of co-operation on the part of some of the owners. We might get Mr. Kirwan, the new County Surveyor, to give us an estimate now. In August, 1904, after ruinous floods, a large public meeting was held at the Courthouse, Ballymote, at which I presided, and at which resolutions were passed calling on the Government to give a free grant to assist the drainage, as in the case of the Suck, Bann, and other rivers. Other resolutions were also passed requesting the Congested Districts Board, as the river flows partly through a Congested District, to co-operate with the Department of Agriculture to carry out the work. After some time the secretary to the meeting (Mr. T. O'Dowd) received replies to the resolutions which he had forwarded to those Boards saying that they had no funds to undertake the drainage. The damage and sufferings of the farmers having lands along this river and its tributaries are enormous. Hay, pasture, and tillage are frequently ruined, being either rotted on the land by floods or swept away. The river is becoming so silted up with mud that any heavy rainfall causes a great flood. It is no exaggeration to say that a large flood in the summer months means a loss of at least £16,000. The persons injured by the flooding of the Owenmore feel bitterly aggrieved at the action of the Government in refusing to give a grant to assist the drainage, while they have given grants to assist the drainage of rivers in other parts of Ireland, to which Sligo contributes its share. Not a single shilling has ever been expended on the Owenmore, and the drainage of this river is as much above the means of the locality as those more expensive works to which Government have given free grants. We consider it very wrong in a case like the drainage of the Owenmore, where a drainage district is required to carry out drainage works, that the Board of Works are not authorised or obliged to send one of their engineers to make out plans and specifications for the drainage, and not have this heavy initial expense thrown on the promoters, who are unable to bear this expense. I have here the correspondence in reference to the matter. There is a letter dated 2nd September, 1904, from Sir Antony MacDonnell acknowledging receipt of the resolution passed at the meeting to which I have referred. There is a letter dated 20th April, 1905, from the Secretary to the Congested Districts Board stating that the Chief Land Inspector had been unable up to the present to make an inspection, but that he was being reminded of the matter in the hope that his other duties may permit him to give the matter early attention. There is a letter dated 26th of May, 1905, annexing copy letter sent to the Under Secretary on the subject of the drainage of the Owenmore. The annexed copy referred to states that the Board had decided not to undertake the work owing to the state of their funds, and the fact that only a small portion of the river was in a congested district. There is also a letter from the Secretary to the Department of Agriculture, dated 28th of April, 1905, stating that schemes for the promotion of arterial drainage must be initiated locally by the formation of a drainage board under the Board of Works, and suggesting that if the parties interested in the matter desired to form a drainage board they should put themselves in communication with the Board of Works.

30062. Mr. O'KELLY.—The Board suggest that the Chief Land Inspector would go there when other engagements permitted; did Mr. Doran go there?—No, but he sent down Mr. Carroll.

30063. Did he make an estimate?—He sent a report. I never saw it. I am fully under the impression that the removal of these obstacles would not assist very much, and would have the effect of reducing the normal level.

30064. I suppose you are aware that the Department of Agriculture has something like £300,000 unexpended to its credit for several years past?—They should give a free grant, and then we will organise a drainage board.

30065. Of course it would be impossible to ask small farmers to undertake a considerable share of this liability?—Yes. If they did something to help them the people would be very willing to do their share. In reference to the question of migration. I cannot see that there are such great difficulties in the matter. I think that people are making mountains out of molehills as regards these difficulties and that when you came to tackle them they would disappear.

30066. Most Rev. Dr. O'DONNELL.—You think firmness and gentleness combined would carry the day?—I have not the smallest doubt.

30067. Sir JOHN COLOMB.—It must be judiciously done?—Yes. I don't go altogether with those who say *festina lente*. The pace of procedure will develop itself if you take it up.

30068. Most Rev. Dr. O'DONNELL.—Do you think if the uneconomic holders on the margin had their holdings enlarged there would be very much objection to strangers from a distance?—Any common sense man can see that these are the people to be first attended to in the case of dividing large farms. That is an instinct.

30069. Do you think the heads of families from a distance would have a claim, to say the least of it, in preference to the sons of men around the grass lands?—Migrate the families, the young with the old, and you will have no difficulty. The Irish people have a great attachment to their home no matter how humble it is, but, as in the Land Act of 1903, there was a bait held out to the landlords to sell their property, so if a bonus of that kind were given to the poor people it would be a great means of inducing them to go in for migration.

30070. Sir JOHN COLOMB.—You are aware that the policy of the Congested Districts Board in carrying out migration is to see that a man is fairly started, and if he has not capital himself, to assist him in any way possible, and that is in itself something in the shape of a bonus?—It would be. I don't think anything further is required, provided it is generously done, than to take them from a worse position and put them in a better.

30071. If a man is migrated to a better holding than the one he has, what is your opinion as to his tenant's interest in respect of the holding that he is giving up?—I presume that the holding which he

gives up will be used to enlarge adjacent uneconomic holdings, to make them economic.

30072. The man is in this position. He has got a holding which is uneconomic, but still if he sold his tenant's interest in it he would get something for it. The Congested Districts Board through the use of State money is going to move that man, who is willing to go, to a better holding. Do you think that the Congested Districts Board should take credit, in arranging with that man, for the value of the holding he gives up?—I should think so. I should think that would go for the purpose of establishing him in the new holding, but I consider that the Congested Districts Board would add something to that as a free grant or as a loan.

30073. One of the points of inquiry of this Commission is as to the general character and methods of the acts of the Congested Districts Board. Do you consider that the Congested Districts Board has done its work well and is a better body to do that work than a Government department?—I believe that the Congested Districts Board has the affection of the people and no wonder it should. It is the first organised attempt we ever had to bring benefits to the doors of the people. Therefore, the people are very much attached to the Congested Districts Board, and I don't think it would be desirable, so far as the people are concerned, even to change its name.

30074. That being so, assuming that a policy prevailed which destroyed the Congested Districts Board, abolished it, and put the work in the hands of the Estates Commissioners or of a Government department, do you think would that new department command the sympathy, good will, and co-operation of the people?—I am afraid it would affect the temper of the people very much.

30075. And make the work more difficult?—And make the work more difficult, because if you have not the sympathy of the people all your movements would be made more difficult.

30076. Mr. O'Kelly.—Would you say that the congested counties in Connaught as well as outside Connaught ought to be committed to the care of the Congested Districts Board and that the Estates Commissioners ought not to be allowed to operate in Connaught at all?—I don't say that. They were operating together, overlapping each other for a considerable time. It would be well if there could be a *modus vivendi* established, but I don't go into that. So far as I know the people, the Congested Districts Board has their entire confidence, and things would run very smoothly and be better done if they were left to the Congested Districts Board.

30077. The proposal has been made in the evidence to schedule all Connaught. In that case don't you think it would be better to hand over all the Connaught counties to the Congested Districts Board, whose special experience enables them to deal with the problem of congestion effectually?—Yes, and I would suggest that their hands should be strengthened by giving them more funds.

30078. Because you do see some disadvantage in having two bodies doing the same work?—There is no doubt about it.

30079. You will find landlords in some cases going to the Congested Districts Board and asking a certain price, having a valuation made, and then you will find them going to the Estates Commissioners to see if they would give a higher price?—Yes. Another point that I wish to bring before the notice of the Commission is this. You have large farms taken over by the Estates Commissioners for the purposes of the surrounding tenants as accommodation farms. I am interested in a case like that at present. In a place called Carrigans, near Ballymote, there is a farm of about sixty statute acres. It has been taken over by the Estates Commissioners for the benefit of certain tenants, perhaps eleven or twelve tenants. It is a beautiful grass farm. They purchased this farm from the landlord, but it seems a tenant came in and took possession of the farm, and though he only had it 1½ years, I believe he had to get £200 compensation, which was brought in on the purchase money. The thing was carried through, and the amount of the purchase money apportioned among the tenants and made part of their contributions. In this case the farm was divided into twenty sums apportioning the number of sums to the surrounding farms *pro rata* according to the quantity of land they held before. They apportioned it to the satisfaction of all the tenants and then a rule was laid down for the benefit of the tenants that no cattle should be grazed on the farm from the 1st of November to the 1st of May. The parties concerned did not seem to take any great objection at the time, but some persons suggested to me it would be very inconvenient for the people to part with their cattle on the 1st of November as the great local fairs take place at that time. I suggested to the officer who had charge of the business that it would be better to give them permission to hold the cattle on until the 15th of November. They all agreed to that. In all these negotiations the Estates Commissioners made no provision at all for caretaking. After the first 15th of November six or seven of the tenants concerned sent in their cattle on the farm and kept them there in spite of all.

30080. That means, I presume, that in your opinion where any such arrangement is made for the benefit of the tenants on a grazing farm it is essential that there should be supervision?—Yes. People who have some surplus cattle think it a great sacrifice that they cannot send them on to the farm, and we had no means of compelling them to observe their agreement. There is one whom I call the arch offender. I said to the tenants that they should single him out and process him before the court. Owing to the technicalities of the lawyers and the devious ways of the law they made a defence and the County Court Judge was in a difficulty to know what to do, as he said the case was a unique one. I was there in the court myself and explained the whole thing and the Judge gave a decree against the arch offender which was supposed to regulate all the others. I brought him into my room and arranged with him to pay according to the number of cattle on the farm, according to the winter grade. All agreed to do that. When I went to look for the money I could not get it. I wrote to the Land Commission about the matter and they told me that every single one of the tenants was interested and had a perfect legal right to take out a process against the offending persons. Putting off the settlement of the matter in this manner is leaving me a *damnosa haereditas* which I would sooner be without.

Apr. 19, 1907.

Very Rev. Canon Loftus.

Rev. B. Quin examined.

30081. Sir John Colomb.—You appear here nominated by the United Irish League?—Yes, by the Central Executive.

30082. What is your parish?—The parish of Achonry. I have seen the works of the Congested Districts Board in the parish of Achonry and the surrounding districts, and whilst I bear willing testimony to the fact that many great improvements have been effected by the operations of the Board, I respectfully submit that their good intentions have not in many cases been realised, and, in fact, could not be realised, owing to the way in which the action of the Board is being hampered by the existing laws. No doubt the Act of 1903 was intended by the Government to give every facility for the abolition of dual ownership in the lands of Ireland, but for one reason or another these facilities have not been generally availed of. There has been no general movement, there has been even no county movement on the part of the landlords to sell *en bloc*. The consequence is that the properties purchased by the Board are isolated, and the operations of the Board for the improvement of the condition of the country are, therefore, confined to those isolated spots. This is very inconvenient. For instance, the Board have now distributed the untenanted lands in Achonry, but no drainage scheme has been carried out; the principal tributary of the Owenmore has been left untouched, and all, it seems, because the Board's officials had no authority over the neighbouring Templehouse estate. The drainage of this river and its tributaries would have conferred almost incalculable benefits on the tenants of the Achonry and surrounding properties. The same is true of the River Moy, which, in its

Rev. B. Quin.

Apr. 19, 1907. Rev. B. Quin.

present undrained condition, is of vast injury to the Board's tenants in the neighbourhood of Cloonaraher. Again, the Board expended a large sum in making a road to Daghloon, but this road is useless, except for the purposes of bringing home turf; whereas, if the Board could have continued it through the neighbouring property to the county road it would prove a work of public utility, and a great boon to the people generally. The expenditure has been in part a waste, simply because only one landlord in the district has sold to the Board, and the neighbouring properties cannot be interfered with. Besides, the County Council would not take over the road as it is at present, whereas, if extended, the County Council would care it, and keep it in repair. On the question of turbary, it is also a great evil that all the properties of a county, or of a substantial portion of a county, could not be purchased simultaneously. It would facilitate immensely the distribution of turbary on economic lines, for the bog-land is very often on the fringe or the mearing of an estate, and the nearer to his home that a tenant can get his bog, the greater value the bog is to him, whereas the present system of dealing with one property at a time, and dividing the bog-land of that property amongst the tenants of that particular estate, may necessitate that tenants should carry turf several miles to their homes at great expense, although these tenants may be living on the mearing of another property, where there is turbary in abundance, and where, if both properties had been purchased simultaneously, a great saving could be effected by the distribution of the turbary on economic lines. This reasoning is also true for the distribution of untenanted land. No one can till on economic terms a farm which is two or three miles distant from his home. And it often happens that the houses of the people are at one end of the estate and the untenanted land at the other, and that an equitable and economic distribution of the untenanted land could only take place by the purchase simultaneously of all the surrounding properties. From what I have seen, I maintain that the Board, so long as it must be content with buying isolated properties, cannot do much good either in the way of main drainage or accommodation roads, nor can it distribute either the untenanted lands or the bog-lands on economic lines; and I therefore hold that the Board should be empowered by Act of Parliament to purchase simultaneously on just and equitable terms all the lands that, in their opinion, are necessary for the purpose of carrying out their improvement works on a scientific and economic basis. This argument leads to compulsion, but it is compulsion of a mild type, which only fixes the terms of a bargain, which bargain both sides believe to be necessary, and consent to. The objection to compulsion seems to be the question of price, and I contend that properties have already been sold voluntarily in sufficient quantities to fix approximately a fair price. Besides, any landlord who would receive such a price as would guarantee him his present net income could not complain if the Government, whilst inflicting no injury on him, helped his neighbours. We have had in this county years of fruitless attempts at bargaining, and it is really time for the State to step in, and stop unreasonableness on either the one side or the other. It is no argument against this view that properties are being purchased as rapidly as they can be dealt with. My contention is that these properties are purchased on the patch-work system, and that the isolation of the purchased properties prevents any large scheme of improvements. It would, in my opinion, be a mistake to limit compulsory powers to Connacht. Most of the untenanted land is outside Connacht, and the Board should have power to buy up, for migration purposes, untenanted land in the other provinces. I may say, in connection with the question of price, that shortly before the passage of the Act of 1903 I had several communications from a landlord of this county, who offered his property for sale to his tenants at twenty years' purchase. The tenants refused to buy because of their hopes in the promised new Act. They have purchased now, and at twenty-three years' of the same rents, with added bonus. The landlord raised his terms when the Act of 1903 became law. This is not an isolated case. I had myself one other experience of the same nature in the County Sligo. The Congested Districts Board have proved so satisfactory and successful in such small works as could be undertaken by them that they not only should get additional powers, but should be liberally financed, and the whole province of Connacht should be placed under their care. The present system of scheduling by electoral divisions is arbitrary, and leads to great injustice. The townland of Branchfield is by far the poorest in the parish of Achonry. It is not scheduled because of the presence of untenanted lands in the division, whilst the neighbouring townlands of Pullagh and Mullaghanarry, which are not nearly as poor as Branchfield, are scheduled as congested, and the Parish Committee scheme is in full working order amongst them. I have the valuations with me, and the figures show that the scheduled townland has twice the valuation of the non-scheduled townland. This seemingly unfair treatment of neighbouring townlands breeds discontent and want of confidence in the Government; and it would be well to schedule all Connacht in order that at least all the poorer districts might be brought under the improvement schemes of the Board. In reference to the question of migration, it is the large landholders—the men of 100 or 200 or 300 acres—who should be migrated to the rich lands of the Midland counties. It would be a far less costly proceeding than the migration of the smaller tenants, fewer dwellings would have to be erected, and less fencing would be necessary, and besides the grazing plains of the Midlands would, in the possession of such migrants, continue in part graziers' plains, even though the number of habitations on them would have increased. Besides the large landowner has no objection to migrate, provided he gets anything more than an equivalent, and the small landowner as a rule has a sentimental objection to migration. I have spoken to large landowners who are perfectly willing to migrate. The Congested Districts Board do not, as a rule, enlarge holdings beyond £10 valuation. I think this is right and proper, but I have known the Estates Commissioners to enlarge holdings up to the valuation of £40, and this in a district where there are many uneconomic holdings, but not on the same property. Further, I believe it is contrary to the Act of 1903 to allow any landlord to re-purchase any lands which are necessary for the enlargement of uneconomic holdings on the property, and I am informed that the Estates Commissioners have allowed this, and if so, they certainly have not grasped the evils of congestion.

30083. You have heard that the Estates Commissioners have allowed that?—Yes. They have allowed landlords to re-purchase lands that were necessary for the relief of congestion on their own properties.

30084. You have not heard that the Congested Districts Board allowed it?—No. The Congested Districts Board never allowed it so far as I know. Superior systems of agriculture should be taught to the people. I believe in model farms, but know that the Department of Agriculture will have none of them. I was some time ago in a position, through the generosity of Sir Josslyn Gore-Booth, to offer them ten acres for a model farm, but the offer was refused. I cannot see, however, why the Congested Districts Board would not utilise the Chaffpool lands and garden in their possession as a model farm and garden for the surrounding districts, and especially for those new tenancies which they have recently created.

30085. Mr. O'Kelly.—Have you any correspondence with the Department of Agriculture?—Not with me.

30086. What was the objection they urged?—No objection, except that they could not take up the farm at present.

30087. They did not give a definite refusal?—No, they said it could not be taken up at present. The congested districts have suffered by the transference to the Department of Agriculture of the Board's schemes for the improvement of agriculture and live stock. The potato is our most valuable crop, and although the experimental days of spraying have passed, the Department have done very little to educate the people either on the necessity of spraying, or the proper methods of spraying, or the proper times for spraying. It is lamentable that after so many years' existence under the Agricultural Board the blight was as powerful and prevalent last year as ever. Neither is the live stock scheme a success. The present scheme of placing a few highly-bred animals in a county, and exercising no authority in the case of all the other animals, promises to be interminable. Neither the Congested Districts Board nor the Estates Commissioners should be allowed to denude the country of its timber. Demesnes may be purchased, but the timber should not

be cut down unless when fully developed, and then only to have the ground re-planted. We have not so many beauty spots in Connacht that we can afford to lose any of them. The work of re-afforestation must be, in Ireland, a Government work, and the lands suitable for this purpose should be retained at the time of sale and vested in the County Council or other public authority. I believe that on the abolition of dual ownership in the land, the duties connected with the properties are transferred to the Government, and that it should be the constant care of the Government to see that all works of public utility now being done by the Congested Districts Board should be maintained in good order; and the Government should reserve to themselves the right to enter upon any holding for public purposes of this description.

30088. Sir JOHN COLOMB.—You advocate the simultaneous purchase of large areas of land in the congested districts?—Yes.

30089. Assuming that policy adopted, and in view of the time it takes to settle a property in a province or a district, striping it, arranging it, going into the details, and fixing it up, do you agree in the apprehension that that would leave the Congested Districts Board in the position of a landlord for a very long time over a very large area?—I don't think so at all. I think it is very much better that the Congested Districts Board should do whatever work it undertakes to do, and do it well, and not buy properties on this patchwork system, but that when they do buy a property they should be empowered to buy all the surrounding properties that are necessary to carry out the work of improvement.

30090. I quite agree with you that the Congested Districts Board should do this work well, and that it requires time, supervision, and great administrative ability. If they are to do it well they cannot rush it. But if you throw into their hands a large area, more than they can deal with, does it mean keeping the Congested Districts Board in the position of huge landlords for a long period?—No. Suppose the Congested Districts Board could not get any additional staff, my contention is, instead of buying a property in Sligo one day, in Mayo next day, and in Donegal on the third, and thus not being able to carry out improvement works on a large and scientific basis they should, when they buy a property here, buy all the surrounding properties, so as to be able to take a broad view of the question and carry out the work in a way that would be permanent and economic.

30091. Another point is that you propose to induce farmers with 100, 200, and 300 acres of land in or near congested districts in Connaught to go to other parts of Ireland; that is with a view to splitting up these large farms into small economic holdings?—Yes.

30092. That might involve having to build houses on those 200 or 300 acres?—It might, but I would not anticipate too many houses would have to be built, because invariably it is on the properties where we have large farms like that that we have uneconomic holdings also.

30093. On the fringe?—Yes; on the fringe of large farms of that description.

30094. I gather it is your general experience that what are really wanted beyond the question of migration are supervision and assistance in the promotion of knowledge of agriculture?—Yes.

30095. You feel that very strongly?—Yes.

30096. You don't think enough has been done in that direction?—I do not.

30097. Do you also think that where the Congested Districts Board have acquired land and striped it and put tenants on it it is very essential for some time to come that they should have some man on the spot to advise, help, assist, and instruct the new tenants in every way possible?—Yes; I believe that.

30098. Do you attach greater importance to a resident instructor who will point out things on the spot than to a man who would come from other places and go away again?—Yes. I attach far more importance to a resident instructor who would instruct the people what to do by showing it to them on the spot, rather than to itinerant instructors.

30099. You are strongly in favour of something being done by the Congested Districts Board or by some other body having small model farms and gardens with a view of showing what could be done?—Yes.

30100. You only mean a model farm worked on lines that are possible for small holders?—Yes.

30101. Most Rev. Dr. O'DONNELL.—You consider that if the Congested Districts Board were able to buy up a set of estates in the same area drainage, turbary, and the enlargement of holdings by the addition of grass lands could be conducted on a more economic basis?—I believe so.

30102. Would it be the case also that with a fair staff it might be quite as feasible to do the work over that parcel of estates effectively and with as much quickness as if only one estate was being dealt with?—There would be far less labour in sub-dividing and distributing the lands on the idea I have suggested than there is at present. No matter what shape a property may take surveyors have to go all along the mearings and see across the mearing where the untenanted land is. In using the maps and measuring the property they practically survey all the neighbouring properties. They have to do it. Not only in the matter of survey, but also on the question of valuation it would be far easier for the staff to carry out the work of the Congested Districts Board on the idea I have suggested than it is at the present time.

30103. Then there would be much less likelihood that the Board would ever have to return again to deal with these holdings?—There would be no likelihood if the work is done on the suggestion I make, because the work would be thoroughly completed and permanent.

30104. With reference to your other suggestion, that the big men should be migrated, are you aware that that has been the policy of the Board?—I have heard that, but so far as I know there has been no attempt made in the County Sligo to migrate any large landholder.

30105. You say these men have much less sentimental objection to changing their location in the country?—They have told me so.

30106. The process is much less expensive?—Yes.

30107. As you say, there is the advantage that the holdings can be increased by additions to them without the State having in many instances to build new houses?—Yes.

30108. I think you suggested that all Connaught should be under the control of the Board?—Yes.

30109. But you would not at all limit the area to which people might be migrated to this side of the Shannon?—No. I think that the Congested Districts Board should have compulsory powers to buy untenanted land in any of the other three provinces for the relief of congestion.

30110. I was much interested in your statement about practical agriculture. Did it occur to you at all that if one of the National schools in a parish, a central school, were turned into an agricultural school much could be done to spread a knowledge of agriculture?—Yes, there could. But I believe it would be much better if the teachers in all schools got a practical knowledge of agriculture, and that attached to every school building was a small farm of two or three acres, and that upon this farm the children would get practical instruction from the teacher. This being principally an agricultural country, and the children having to make their living by agriculture, they should be taught from their earliest years the best system of agriculture. In order to have this done the Government should see, and I think it should be the business of the Congested Districts Board to see, in the districts of which they have charge, that attached to each school there was a small farm of two or three acres, larger, if thought necessary, in order that the teachers might give practical instruction to the pupils; but with the teachers whom we have at present in the school this could not be done, as the teachers would first require to get a practical knowledge of agriculture.

30111. You would require a special training college to train the teachers?—Yes.

30112. Or a special department in a training college?—Yes.

30113. You think if the boys from tender years got a little education in light farm work or gardening and agricultural chemistry they would not be any the less disposed to pursue sufficiently the ordinary school work?—On the contrary, I believe that it would make the ordinary school work very interesting to them.

30114. Go to the other side, and take girls. Do you think it would be a good thing if you provided in some way that there be a room in each of the National schools, where the girls from tender age would begin

Apr. 19, 1907.

Rev. B. Quin.

to practice these little industries through which afterwards they might earn a livelihood?—It would be a wonderful advantage, and, of course, a great deal is being done in that way already. As your lordship is aware, the girls are in practically all the schools taught to sew and to knit, and things of that description, and small things, no doubt, suitable to their tender years. Still, a great deal more could be taught to them. But under the county schemes now, girls are being taught cookery and laundry work by itinerant instructors; but this is not as good a system as permanent instructors attached to National schools.

30115. Of late there is a tendency to practical work in National schools. Do you consider it was a great loss for so many years after the starting of the National system in Ireland, that there was little practical training given to either boys or girls?—It was a great loss to the country, decidedly.

Mr. J. M. Cryan examined.

Mr. J. M. Cryan.

30116. Sir John Colomb.—You are nominated by the Boyle No. 2 Rural District Council?—Yes. The two points that I was asked to bring specially before you are the necessity of relieving congestion and of carrying out arterial drainage. The scheduled area should be extended, so as to include the entire of Boyle No. 2 rural district.

30117. Mr. O'Kelly.—How many electoral divisions are there in Boyle No. 2 rural district?—There are ten unscheduled and three scheduled.

30118. You desire to have the ten non-scheduled divisions scheduled?—Yes.

30119. Is your district close to the plains of Boyle?—Pretty close.

30120. Is it because of the high valuation of the grazing ranches of Boyle without any population that the ten divisions referred to are excluded from the definition of congestion?—Yes, and grazing ranches outside, even in the County Sligo.

30121. Mr. Kavanagh.—Is there as much poverty in the other divisions as in those already scheduled?—I believe more. The very division I represent myself, Templebanny, has more than 100 holdings under £4 valuation.

30122. Mr. O'Kelly.—Are there many properties bought there?—Only one at present.

30123. By whom was it bought?—By the Estates Commissioners.

30124. Was it bought in your division?—Yes.

30125. Is there grazing land on it?—A lot.

30126. Have the Estates Commissioners got hold of the grazing land?—They have.

30127. Are they dividing it up amongst the people?—They are very slow about it.

30128. Are they in process of doing it?—Yes. Canon Loftus gave you an instance of it at Carrigans.

30129. You think it a grievance that those districts which contain a lot of poverty should be excluded from the operations of the Congested Districts Board?—Yes.

30130. Mr. Kavanagh.—Among whom are they dividing it?—They are not dividing it at all. They are simply letting it for grazing purposes for six months of the year.

30131. Mr. O'Kelly.—They are letting it only until such time as the property is vested?—The property is vested already in the tenants.

30132. What is the name of the estate?—The King-Harman, Rockingham, estate.

30133. Sir John Colomb.—The other point you were anxious to refer to is drainage?—Yes. I believe arterial drainage would be a great benefit to the country at large. There is a lot of land rendered practically useless by the flooding of the Owenmore and other rivers.

30134. You are speaking of general drainage and the relief of flooding from rivers?—Yes.

30135. You attach extreme importance to that?—Very great importance.

30136. I take it that the reason you press it upon us is because you don't think sufficient has been done in that direction?—Yes.

30137. And you wish to impress the Commissioners with the fact that more should be done?—Yes.

Mr. William Gilmartin examined.

Mr. William Gilmartin.

30138. Chairman.—Is there any particular point you wish to make?—I am Vice-Chairman of the Boyle No. 2 Rural District Council. I am a farmer, holding thirty-one acres, and reside at Derrynagray, Ballymote, County Sligo, and am familiar with the conditions of the small farmers in the various electoral divisions of Boyle No. 2 Rural District. There are three electoral divisions of Boyle No. 2 already scheduled in the congested area. Ten divisions remain unscheduled, and in each of these ten divisions the condition of the small farmer is just as bad as any within the scheduled area. It is unjust that these ten divisions should be debarred from the privileges of the Congested Districts Board owing to the amount of untenanted land and non-residential farms in them. As an instance, I may state that in the electoral division of Drumrath there are 2,000 acres of untenanted land and non-residential farms. Bordering those there are 136 tenants under £5 valuation, and 63 between £5 and £10, making a total of 199 living on uneconomic holdings. In many places these poor people are huddled together on patches of reclaimed bog, and on the refuse or useless portions of those fat and fertile lands, used for bullock runs and sheep walks. The same may be said of the other electoral divisions not scheduled in Boyle No. 2 Rural District. They are studded over with untenanted land, while the poor people have to exist on the bogs and mountain sides. To relieve this unnatural condition of things it is necessary that these non-residential and untenanted lands be taken over by the Government and re-distributed amongst the tenants who hold uneconomic farms in the neighbourhood. This rural district is very mountainous, and on the slopes of the Curlew, Derryknockeran, Keash, and Geevagh Mountains. There are hundreds of small farmers living on reclaimed patches of mountain that have not one perch of land on which to grow a potato fit for human use. They have to go to the nearest grass farm, and pay the exorbitant price of from £6 to £9 per acre for land to grow potatoes.

30139. Sir Francis Mowatt.—They have to rent land on a grass farm?—They have to go to the nearest grass farm, and pay the exorbitant price of from £6 to £9 for land to grow potatoes.

30140. Chairman.—Do you know this of your own knowledge?—Yes. This is all from my own experience.

30141. Where is this place? I should like to see this place very much?—I have given an instance of Drumrath, where there are approximately 2,000 acres of untenanted and non-residential farms.

30142. But where are these places where the people live on land that won't even grow potatoes?—In the slums of Derryknockeran, Keash, and Geevagh, and various other places in the immediate vicinity of these mountains.

30143. Sir John Colomb.—You mean £9 an acre for the year for the crop?—Yes.

30144. Is that an Irish acre?—Yes.

30145. Most Rev. Dr. O'Donnell.—But they pay the £7 to £9 an acre out of sheer necessity?—Yes.

30146. Without this they could not live at all on the mountain slopes?—They could not raise potatoes.

30147. Chairman.—They pay because they hope to grow potatoes?—Yes. They take it as con-acre at £6 or £9 an acre for one year to grow potatoes on. That is taken on con-acre by the small farmer, who has no land suitable to grow potatoes. He has to pay that price to the man who owns the untenanted land.

30148. Most Rev. Dr. O'Donnell.—Is not that a manured crop?—Yes. He has to buy artificial manure to apply to the land.

30149. Mr. Sutherland.—This has to be done by the man who takes the con-acre?—Yes.

30150. And he has also to cultivate it?—And he has also to cultivate it. He has to bring from 6 to 8 cwt. of artificial manure.

30151. Most Rev. Dr. O'Donnell.—Is the land let only for one year?—He may have it next year for oats.

30152. What has he to pay for the oats?—The very same price. He may get it for £1 less.

30153. Chairman.—Does this happen at Gurteen?—Yes. It does happen there.

30154. Mr. Sutherland.—Does that acre go back into grazing when the man who has taken it in con-acre gives it up?—Yes. There may be rye grass taken off it next year. Then he has the privilege of taking the rye grass at a price. An outsider might come in and outbid him, or the owner of the land might keep it for himself.

30155. Sir Francis Mowatt.—Does such a con-acre holding gradually go back into grass?—Yes. There is generally one crop of potatoes, one of oats, a crop of rye grass and then back to pasture again.

30156. Mr. Kavanagh.—I suppose that the man gets it two years for certain?—Yes.

30157. He would not put the manure on unless he got it for the second year?—Yes.

30158. What would you have to give for an acre of potatoes if you went to buy it?—The produce of an acre?

30159. Yes?—That is a difficult question. In the market if a man has more than he requires he will get about 2*s.* a cwt.; that is about £2 per ton. That is about the average, but this year he would get up to £5, owing to the bad crop.

30160. Suppose he takes it at £9 an acre, and then wanted to realize his money, how much per acre could he get?—No such system is carried on in this country.

30161. What are the townlands?—In the electoral division of Drumrath there are seven townlands including Kilfoddel, Derryeen, and Boytown. In this townland of Boytown there are ten tenants, and the valuation is under £1, and they have to go to those grass farms and pay the price I have stated for land to grow potatoes. If they keep a cow they have to pay an exceptional price also for the grass of the cow, and they have to go in summer time and pay an exorbitant price for meadow, and save it and bring it home.

30162. Chairman.—How do they get the money for all this; surely no way of keeping the cattle would ever return them sufficient money to enable them to pay £9 an acre?—It would never do it. They get assistance from their sons and daughters away in England and America, and places like that.

30163. Surely it would be a great deal cheaper to remove?—They cannot. They have no place to go.

30164. The money which they spend in this way seems to me so large that in a few years it would amount to a sum sufficient to buy a tenant right somewhere?—I quite agree; but it takes each year to meet its own demands, and they would starve if they did not invest in this land to grow potatoes.

30165. Why don't they, instead of spending this enormous sum of money, taking one acre of land to grow potatoes, buy the potatoes; it would seem cheaper than that?—Really they could not do that. The fact would be that they would be going round with their hands in their pockets the whole year if they had nothing to employ themselves at.

30166. Do they spend this money to give themselves something to do?—No; I don't mean that, but it would be a wretched way to have them going round doing nothing. My inference is that it is a great pity these industrious people would not have good land to cultivate.

30167. How much potatoes would an acre of land in con-acre return him?—Four or five tons is a very good crop.

30168. And they pay £8 or £9 an acre for the land to grow it?—Yes.

30169. Sir Francis Mowatt.—Let me call your attention to the fact that the production of potatoes per acre in Sligo is not quite three tons an acre?—I am sure it was, and less last year.

30170. Most Rev. Dr. O'Donnell.—This land would be good land?—Excellent land, and with artificial manure there will be an excellent crop.

30171. You would not overstate the produce at five tons an acre?—It would be an excellent crop.

30172. Chairman.—An excellent crop of five tons that would cost him £8 apart from labour, merely the renting of the land?—Yes.

30173. How much would it cost to buy five tons of potatoes?—£25 at the rate they are going now, five shillings a cwt. in the market of Boyle. That is the price this year.

30174. Most Rev. Dr. O'Donnell.—In an average year what would be the cost?—£2 a ton approximately, as near as I can go.

30175. Would not it cost more?—More or less.

30176. The second year the farmer is not compelled to put any manure into the land?—Yes.

30177. He has merely to buy the seed?—Yes, and do the work.

30178. So when the two years are taken together there is some explanation of the investment?—Yes. The instructors appointed by the Agricultural Department in going through the country never attempt to carry out experiments on any of these wretched little holdings, the inference from which is that it is useless to cultivate such soil. They always select a sunny fertile field.

30179. Sir John Colomb.—For the experiments?—Yes. If it were not for the assistance of exiled sons and daughters no doubt many of these holdings would be abandoned. The poor people of those districts are elevated so that they can look down on the plains of Boyle on one side and on thousands of acres of non-residential and untenanted land on the other. One half of the land in Boyle No. 2 Rural District used for tillage is entirely too wet and can never be successfully cultivated until it is thoroughly drained. There should be a greater effort made to encourage and assist the people to drain and improve the soil than to make roads and improve houses, for it is on the soil the small farmer has to depend for all and everything. Therefore improvement of the soil should get as much prominence as the making of roads or building of houses. After the soil was made dry by drainage, if lime was available, and properly applied, I am confident good results would follow. If the condition of the small farmer is to be improved two things are necessary:—1st, the non-residential and untenanted land must be divided for the relief of congestion; 2nd, the Government should give a loan at a low rate of interest to have the wet land of those districts drained.

30180. Sir Francis Mowatt.—You say the Government ought to advance a loan on low terms for drainage?—Yes.

30181. Whom do you suggest that the Government should advance a loan to?—Either through the Congested Districts Board or give it to the small farmers themselves, and to have an inspector to see that the work would be done.

30182. Who would be responsible for the keeping up of these drains when made?—I would suggest closed drains for tillage land. Open drains would not be suitable.

30183. Mr. Sutherland.—You mean draining of fields?—Yes; the draining of wet fields. This very year the people tilling wet soil are held back up to the present, and they cannot get a crop. In many cases the seed is gone almost bad before being put into the ground.

30184. Sir John Colomb.—Is not this an exceptionally dry year?—On the contrary the last four weeks have been wretched weather.

30184A. Was January over-wet?—That was too early for putting in seed.

30185. They have all the land prepared in January?—No; they have not.

30186. Is it a dry month to prepare?—The soil is so wet that they never attempt the preparation of the soil at such an early period. They have to wait until it loses part of the moisture before they can attempt to prepare the ground for the crop.

30187. Mr. Sutherland.—How do you propose that this money should be used that was got as a loan for drainage?—The small farmer with ten acres of wet land unsuited for agriculture has to make the best of it. This land could be made dry by drainage, and I would say it would cost £8 per acre to have it thoroughly drained.

30188. How would it cost it?—To have drains dug three and a half feet deep.

30189. That is an ordinary process of cultivation?—Yes.

30190. Would you have to buy anything; would you drain it with tiles or stones?—Fourteen inches of stones on the bottom, covered over with something to keep the clay from going down through the stones.

30191. So your proposal is he should be paid for making improvements?—He should be encouraged in

Apr. 19, 1907.

Mr. William Gilmartin.

some way. I say it would be as good a way as the Congested Districts Board or any other body could assist the small farmer.

30192. Most Rev. Dr. O'Donnell.—You don't want a grant; only a loan?—Yes; a loan at a low rate of interest.

30193. Mr. Sutherland.—If you have no material to purchase in what way would the loan be employed?—On labour.

30194. Most Rev. Dr. O'Donnell.—If he had ten acres he would not be able to drain the entire ten acres by himself?—If his sons are not enough he has to employ labour.

30195. Mr. Sutherland.—Generally drains of that kind are done by the tenant himself in his spare hours?—Quite so.

30196. I quite follow you that if you had to employ labour you would require money to enable you to do that?—It might be done by the small farmer himself while his sons remain at home with him, but when they get sick and tired of the business and leave it then he has enough to do to cultivate one acre, or one and a half acres.

30197. In reference to the Department of Agriculture and Technical Instruction to which technical education is entrusted, do you know if they have made reclamation of land any part of technical instruction; do they instruct the people in the best way to reclaim land?—They do.

30198. Have you seen the syllabus?—I have seen an experimental plot.

30199. On what sort of soil; on bog?—On excellent soil; the most fertile soil that could be procured.

30200. The principal industry of Ireland is the reclamation of land?—I would say it should get as much prominence as any other industry.

30201. Am I right or wrong in assuming that?—I would say you are right. It is on the soil that the small farmer has to depend. If the soil will not support him he must either leave it or have it improved.

30202. We may take it that a large proportion of the land of Ireland that is at present used for agricultural purposes has been reclaimed from bog?—A large proportion.

30203. A very large proportion?—A very large proportion.

30204. We see it in process of being made wherever we go. Therefore, don't you think the Department of Agriculture might have demonstrations as to the best way of reclaiming land?—So they have, but I would sooner a great deal see them experiment on one of these wretched little holdings that a small farmer has to live on.

30205. Are they doing that?—Not in my district.

30206. Are they doing it anywhere to your knowledge?—I saw an experimental plot on one occasion in Boyle No. 2.

30207. It was not on bog land?—No; the most fertile spot that could be got where it was quite easy to carry out experiments.

30208. Do you think there is anything to learn by these tenants with regard to the reclamation of land?—The great majority of them have a thorough knowledge of the reclamation of land. They have that by practical experience, and they can make more out of an acre of land than the most scientific man that could be introduced.

30209. Did it ever occur to you that they have not made these demonstrations because they cannot?—I am not aware.

30209A. What is your opinion?—I say they have just as much right to experiment on one of these wretched holdings as on the fertile land.

30210. How are they going to do it; or what do you propose with regard to it?—I would say they should not do it at all if they would not experiment on all classes of soil.

30211. Suppose they come to conduct experiments to show the people a better way of reclaiming bog than they have, what should they do?—It would take them all their time to show the people a better way than they have of doing it if they have the means.

30212. May not that be the reason why they don't do it?—I don't think so. That is not my point. They don't do it.

30213. Sir John Colomb.—You think you could teach them a thing or two?—I don't mean myself. The vast majority of them have a thorough knowledge of the reclamation of land. They are at it, and their fathers before them were at it.

30214. If this process of reclamation has been going on with a thorough knowledge from father to son, how is it that there is any land that wants reclamation now?—My explanation would be that as long as the small farmer had any help, as long as his sons stuck with him, he tried as far as possible to reclaim land. When the sons grow up they go away, but there are attempts made on the part of the large majority of small farmers to have lands reclaimed.

30215. Do you believe it would pay them to reclaim lands?—Yes.

30216. Why don't the sons stay at home and do this if it would pay them to reclaim?—I don't say it would pay the son better than going away when he can get a higher price for his labour in England or America than at home; and if there is a farm of ten acres it would be unfair to expect four or five sons to stop on that land and spend their whole life on it.

Mr. Dominick Henry examined.

Mr. Dominick Henry. Bush

30217. Chairman.—Would you kindly mention to the Commission any points that you wish to bring before us?—There are twenty-one electoral divisions in the Tobercurry Rural District, nine of which are already scheduled as congested; and I am of opinion the remaining twelve electoral divisions should be also scheduled, for the reason that a portion or portions of each of them will be found to be congested—for example, in the electoral division of Branchfield out of a total of about thirty-six holdings there are fifteen of them rated at £5, and under; and in the adjoining electoral division of Loughill, which I represent, there are about forty-seven holdings, twenty-five of which are rated at between £5 and £10, and ten of them under £5; and I believe this condition of affairs applies with equal force to the other non-scheduled divisions. It appears to me that non-residential holdings rated at, say, £50 and upwards would be the lands most suited for the relief of congestion; and I would advocate compulsory powers to the Board to acquire the lands necessary, and like powers for the migration thereto of persons inhabiting congested areas, and the placing of sufficient funds at the disposal of the Board for these purposes.

30218. Most Rev. Dr. O'Donnell.—You are distinctly of opinion that in the area which is not scheduled there are some poor spots which need special treatment as much as the places that are scheduled?—Far more than some of the places that are scheduled.

30219. Chairman.—Why more so?—There is more poverty. The reason that places like Branchfield are not scheduled is that there is a farm with a valuation of £150 in the vicinity, and the division is very small.

30220. You think if that farm was not there at all the rateable value per head of the population would be a great deal lower than in some of the scheduled districts?—Yes, on the townland of Branchfield especially.

30220A. What would you like to see done—would you like to see these spots scheduled by themselves where poverty could be shown, or the whole of Connaught scheduled?—I would like to see the whole of Connaught under the Congested Districts Board, and compulsory powers given to them to re-arrange as they liked and purchase estates anywhere they liked.

30221. Mr. Sutherland.—What would you do with Donegal?—The same would apply to the seven counties, different portions of which are scheduled. The con-acre system exists in my place, where they pay £6 10s. to these farmers who have 100 acres, for potatoes and oats.

30222. You cannot remove all these mountain people who do that?—I would not remove them all. I would take away three or four of them.

30223. And so enlarge the holdings?—Yes.

30224. But so long as people remain there can you avoid their having to go down and take con-acre?—It would, because then they would have more liberty to till on their own land, and more places for their grazing cattle. Suppose they have two or three milch cows, to keep up those cows they have to go out to those farms and con-acre portion for potatoes and

oats, and take in fodder to feed the cattle, to send their milk to the creamery.

30225. What do they do with their own holdings?—Till portion of them, and take meadowing. These unproductive portions are very small.

30226. When they are very small like that what do they do with them?—They till portion of them, and keep two or three little mountain cows, and rear the calves, and meadow a little bit of it.

30227. Do they grow potatoes?—Some of them do, but the potatoes they grow are not very good for human use, and they go to where they get pretty good land.

30228. Their land is so bad that they cannot grow good enough potatoes?—They cannot.

30229. If you gave them more land of that sort they would still be forced to go?—They would not be in such a state of distress.

30230. If the land is so bad that it won't grow potatoes?—Part of it is so bad that it won't grow potatoes fit for human use.

30231. If you were to throw three holdings into one would merely doing that prevent a man from going down?—Yes. The man who would live on the holding that would be left would not require to go for con-acre, because he would find a portion of this land that would be fit for potatoes.

30232. You really think that?—Yes.

30233. Because probably he could not get the con-acre afterwards. If you were to break up the land among the other people they would want it for themselves?—I could point out seven miles of land outside Ballymote where there was no law-suit for seven years; while all along the other side of the Ox mountains is thickly populated.

Mr. Peter James M'Dermott examined.

Mr. Peter James M'Dermott.

30234. Chairman.—Kindly state what points you wish to bring before the Commission?—I would be in favour of having the entire rural district of Tobercurry treated as a scheduled congested area, as I believe on inspection it will be found that parts of each of the present non-scheduled divisions will be found to be congested, and in some instances acutely so. The lands most suited to remedy this state of affairs are non-residential holdings, and I am strongly of opinion that the Congested Districts Board should get compulsory powers for the acquisition of such lands, that they should be provided with adequate funds for the purpose, and that the Board's constitution should be widened if possible, so as to afford county representation, and also that the speed of its operations should be quickened.

30235. Mr. Sutherland.—How long does it take for the Congested Districts Board to act?—I know two cases of estates lying quite close to where I live. The Congested Districts Board have got hold of them so far back as 1901, and they have not quite finished up the work of dividing and allocating the lands of those two estates. Though they are five years at work, they have not quite finished up the work yet. They are comparatively small estates too.

30236. Sir John Colomb.—What are the names of the estates?—One is the Armstrong estate.

30237. Chairman.—The Armstrong Estate they have had only two years—I have just been over it?—It may be only three years since it came into their possession, but negotiations that were regarded as being definite were in progress two years before that.

30238. They cannot begin re-striping or doing any work upon it until they get possession?—What I would suggest, if possible, is that the speed of its operations should be quickened, and they should be afforded facilities for getting possession of the estate in a shorter time than two years.

30239. Two years elapsed between the time the purchase was agreed on and the time that they got it?—Quite so. The other estate is the Dany Estate, in the County Mayo, quite close to the Armstrong Estate.

30240. Mr. Sutherland.—What time do you think reasonable to allow to the Congested Districts Board to adapt the estate?—I think a year should be quite long enough to acquire ownership of the property, and another year should be sufficient to stripe up and allocate to the tenants.

30241. And to make roads, fences and houses where necessary?—Yes, and in connection with the speeding of the operations of the Board I think a circumstance that has a great deal to say to the slowness is the rate of wages that they pay to workmen, the ridiculous rate of wages they pay to the overseers.

30242. Do they pay too little or too much?—They pay too little, and they pay their overseers much too little. I think if they paid their men better, and paid their gaffers better it would make it worth the while of the gaffers to attend to their position, and they would get better men.

30243. Do they pay lower wages than those current in the district?—No, but they pay wages not one particle higher.

30244. Would you expect they should?—Certainly.

30245. Sir John Colomb.—Why?—Because they expect the men to work longer hours. It would not be the same rate of payment if the time the men worked were considered. It would be a lower rate of payment.

30246. Most Rev. Dr. O'Donnell.—What regulates the number of hours in a locality for which a man is employed?—I could not answer that question.

30247. How do you know the hours are longer under the employment of the Congested Districts Board?—The Congested Districts Board require the men to come to work at seven o'clock in the morning. If a man is five minutes late he is deprived of a quarter of a day's wages, while a farmer will allow a labourer to come in at eight or nine o'clock in the morning, and the man gets a full day's work.

30248. Sir John Colomb.—Do you know that in England and Scotland they begin before six?—I believe that is the case.

30249. While a day's ordinary labour on the farm here begins at eight or nine o'clock?—About eight.

Mr. P. J. Henry examined.

Mr. P. J. Henry.

30250. Chairman.—You are a Justice of the Peace, and reside at Doomore, Tubbercurry?—Yes. I reside at Doomore, Tubbercurry, in the County of Sligo, and am treasurer of the Cloonacool and Tubbercurry Branch of the United Irish League, and a Justice of the Peace. Being a large farmer in this parish, and also holding another farm in a neighbouring parish, I am well acquainted with the condition of the small farmers in this district. I deal first with the Beatty Estate, Tullycusheenbeg. It is very much congested. There is no untenanted land on the estate. A small lake there could be drained at very little expense. A thorough system of drainage is much needed in this parish. The River Moy runs through the centre of a very congested district, and the adjoining lands suffer very much for want of drainage. The people cannot get their potatoes and oats into the wet lands until about the 1st of May. Consequently, when the blight appears early, as it did this year, the stalks are not fully matured and the potato crop is a total failure. In a wet year the loss sustained by the farmers along the Moy cannot be less than £1,000 in the parish of Tubbercurry alone. The hay and oats in a number of cases are carried away by the floods, and what remains is useless for feeding purposes, as it is saturated with mud and sand, and it can only be used as bedding and manure. The untenanted lands in the parish are Ballyglass, containing 500 acres, mixed land, and Lower Leitrim, about fifty acres. I next refer to the Knox estate, comprising the townlands of Ballyara, Carrowreagh, Carane, Doomore, Mullaun, Mullaghanarry, Pullagh and Cloonaraha. It was offered for sale to the tenants about the year 1896, the price then demanded being eighteen years' purchase. In November, 1904, it was again offered at twenty-six years' purchase, and again in 1904 at twenty-four and a half years' purchase. The estates already sold in this parish are the O'Connor estate, Carrentubber, sold about 1886, at fourteen years' purchase; the Brett estate, Corsallagh, about 1894, at fourteen and fifteen years' purchase; the Meredith estate, Sessue, about 1895, at fifteen years' purchase; the Fitzgerald

Apr. 19, 1907.

Mr. P. J. Henry.

estate, Tullycusheen, in 1903, at sixteen years' purchase. Under the Act of 1903 the following have been offered for sale also:—The Young estate, Cloonacool, in 1904, at twenty-six and a quarter years' purchase; the Cooper estate, in 1904, at twenty-four and a half years' purchase; the O'Hara estate, Longhill, in 1905, at twenty-three and a half years' purchase; the Leitrim estate (in Chancery), in 1906, at twenty and twenty-one and a half years' purchase. On the O'Hara estate the tenants are very much in arrears, consequently they would agree to purchase on almost any terms. Most of the tenants owe from two and a half years' rent upwards. On the Leitrim estate some of the tenants are much in arrears also, and would accept any terms in order to have arrears wiped out. In the case of the sale of the Meredith Estate, Sessue, an outside landlord (Cooper) bought something over 100 acres of the best portion of the bog, the tenants did not understand that they were losing this bog until the sale was completed, when it was too late to object. On the Corsallagh Estate some of the tenants were badly treated. They were allotted portions of bog altogether away from their holding and no right of way pointed out, so that they have to trespass on others in getting to and from their portions of bog. Some of them have no right of way from their houses to the public road, and when going to mass, market, or other necessary places they have to trespass on others, consequently they are persecuted, and are often brought before the local petty sessions. Taking each estate in the parish of Tubbercurry, the rents are earned either in England by the farmer and his sons, or sent from America by the sons and daughters of landholders. The merchants and traders of Tubbercurry supply the outfit, and often advance the money to enable those boys and girls to go to America, and have often to wait for their money from one to two and three years before they are fully paid. At the present time if those resources were cut off, the people would be unable to live on the land, as the merchants would scarcely advance provisions, clothing, etc., if there was no prospect of being paid. If the merchants and traders pressed for the money due to them, they would leave nearly all the middle class and small farmers without any live stock on their lands, but they always indulge and encourage the farmers to hold on to their stock until they can be disposed of at most advantage. They even advance the rents to the farmers when required, as the landlords have no sympathy whatever with their tenants, and unless the rents are paid on a given date, the tenants are sure to be put under law costs. The tenants in this parish who apparently can get along without assistance from America, England, or other resources would scarcely be ten per cent. of the whole. The small landholders pay from £5 to £6 an acre for con-acre to those who have larger farms. Some of the latter are non-residential. For a number of years the Congested Districts Board gave a grant of £100 a year for the benefit of small farmers.

30251. Sir JOHN COLOMB.—In what way?—They gave it to the parish committees for the improvement of holdings and the dwellings. This is of great advantage, as it encourages them to erect partitions in their dwellings, thus providing decent sleeping accommodation. Hundreds of outhouses have been built and roofed with corrugated iron for cattle, pigs, and poultry; a number of these were heretofore kept in the dwelling-houses. A number of useful bye roads have also been made, together with drains in wet, marshy lands. The appearance of the farmers' homesteads have been vastly improved owing to the Board's annual grant to the parish.

30252. Therefore the Parish Committee has done very good work?—Yes. I believe so. I have been one of the members myself.

30253. Besides improving the homesteads has the farms been improved through the Parish Committees?—In some cases wet and marshy land and in some cases streams and rivers have been drained.

30254. Sir FRANCIS MOWATT.—Have the Parish Committees done any drainage?—Yes.

The Commission adjourned.

SIXTY-FIFTH PUBLIC SITTING.

SATURDAY, 20th APRIL, 1907,

AT 11.0 o'CLOCK, A.M.,

At the Courthouse, Tubbercurry, County Sligo.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. EDWARD G. BOLES examined.

Apr. 20, 1907

Mr. Edward G. Boles.

30255. CHAIRMAN.—Where do you live?—I reside in Knockacopple, Gervagh, Ballyfarnan, County Roscommon. I am Secretary of the Highwood Branch of the United Irish League, County Sligo, and am appointed to give evidence on behalf of that branch before the Royal Commission. The number of holdings inside the confines of the above branch is 225, 106 of which are over £10 valuation. There are 89 from £10 to £5 and 30 under £5 valuation. In the townland of Annaghloy, Electoral Division of Kilmactranny, County Sligo, there is a grazing ranch containing about 120 Irish acres held at present by Richard Gorman, Templevanny, County Sligo. This farm is non-residential, a herd named James Gunning living on it. There are about twenty-eight Irish acres owned by Colonel Gethin on the Innishmore Island, Lake Arrow, Electoral Division of Killadoon. This land is at present held by William Attison, Ballingarry, Corriganroe, Boyle, on the eleven months' system. There is a workman of Colonel Gethin's named James Gildea living on this island who has no land at all. There are very small holdings in the townlands of Ballinarry and Corrigeenblike, and in some instances the people have no land. On the King-Harman property recently sold under the Wyndham Act there is a portion of good land containing about five Irish acres situate in Lower Barroe. This land was taken by the Gethin family about forty or forty-five years ago. It adjoined the demesne, and comprised the best portion of the Barroe tenants' property. When this land was taken from the tenants it deprived forty or fifty of them of a convenient pass to water, as the land runs along the shore of Lake Arrow. A good number of the King-Harman tenants were in arrears, and rather than pay the arrears they agreed to a high purchase price—twenty-one and a half and twenty-three years' purchase, which the majority of them will not be able to pay. The Sir Gilbert King Estate comprises the land of Ballinarry Upper and Lower Annaghgowan, Electoral Division of Kilmactranny. The tenants on this property approached the landlord in 1904, and asked for terms of sale. The landlord demanded twenty-six and a half years' purchase on first term rents and twenty-four and a half years' purchase on second term rents, while some of the neighbouring properties on which the land was much better than on this estate, were sold at seventeen years' purchase. Terms were refused by the tenants. On the O'Connor estate, which comprises the lands of Carricknagrip, Corrigeenboy, and Treenmore, immediately after the passing of the Land Act of 1903, the tenants demanded a sale. The landlord asked twenty-one and a half years' purchase, while the Greevagh property, which comprised land of a very superior quality, was sold at seventeen years' purchase. The tenants refused the landlord's offer, as most of them depend on American earnings which might not continue. There are nineteen families on the O'Connor property, and one man has nearly as much land as the other eighteen. The Colgan property comprises the quarter lands of Tullybullawn and Cornamuckla, Electoral Division of Killadoon. The land on this property is of an inferior quality, and was cleared of most of its tenants in the famine year of 1846. Afterwards the land was re-tenanted and at the time of setting, the receipt issued to each tenant was dated back a half year, so that a tenant who took a holding in May, 1849, would have a receipt dated November, 1848, but there was an unwritten agreement that this was never to be charged. About the year 1897 the landlord claimed the running gale, and the tenants had to pay three half year's rent inside fifteen months, and but for the generosity of their friends in America and in England the tenants would have been unable to pay this. The tenants on the above property approached the landlord in 1903, and demanded a sale, which he refused. The tenants again demanded a sale in 1904 by a petition signed by Rev. G. J. Coyle, P.P., Gervagh, Ballyfarnan, County Sligo, but were also refused this time. The tenants on this property depend mostly on earnings from America. They would be anxious to purchase through the Estates Commissioners, in order to have an inspection of the land. I believe compulsory purchase will be necessary on this property as well as on the other properties I have previously mentioned. In the Kilmactranny property the terms of sale are—First term judicial tenants, 21½ years' purchase; second term, 24½; the year's rent then due to be added to the purchase, and all arrears wiped out, but most of the tenants owed no arrears. The tenants got the sporting rights, and tenants who adjoin the bog are to have it after the turf has been cut out, the other tenants to leave three feet of mud for reclamation purposes. There are five tenants under £5 valuation, but two of them have land on adjoining properties. There are four tenants who have no land on the property; one of them has land on an adjoining property. This property was offered for sale about nineteen years ago for seventeen years' purchase, but a few of the tenants would not agree to give more than sixteen years. After about two months all agreed, but the agent then informed them that the sale had been abandoned. I believe this was on account of the interference of the mortgagees. If the tenants had accepted the landlord's offer at that time they would have got a reduction of eight shillings in the pound, whereas the landlord is now, taking all things into consideration, getting as good as ten years' purchase more than he offered to sell at nineteen years ago. There is another matter that I wished to bring under your notice.

30256. Yes. What was the other point?—It is with regard to about 150 or 160 acres of bog which adjoins the Highwood district. This bog is owned by the representatives of the late Mr. Parke, and it would be of great utility if it was purchased or acquired by the Estates Commissioners or the Congested Districts Board, and divided up amongst a number of the tenants for the accommodation of turf, as there is no turf in the Highwood district. They have to go five and six miles for turf. And they also requested me to bring under the notice of the Royal Commission that it has been

Apr. 20, 1907.

Mr. Edward G. Boles.

certified by experts that there is a lot of coal in the district, that is the Highwood district, as experts on different occasions certified.

30257. Yes?—And there is also in the Gervagh district about 1,100 acres of land, and it would be a great benefit if the people were taken from townlands such as Cornmuckla and Tullybullawn, and migrated into these farms, as the parties have to take con-acre all round in our parish of Highwood year after year.

30258. I do not find anything about this farm you are speaking of belonging to Mr. Gorman of Templevanna. Where did you get that from? What makes you say that there is this place in the townland of Annaghloy—do you know that yourself?—Well, I am well acquainted with the situation of the farm, and I live within two miles of it, and know all about it.

30259. But Mr. Gorman is the tenant of it at present?—It is a non-residential farm. He is not living there.

30260. But it is tenanted land. Mr. Gorman is the tenant of it, or the purchaser of it. It is not untenanted land. It is not in the hands of the landlord?—This farm belonged to Mr. Gorman, and he is the owner and occupier of the farm. It is what we call a grazing ranch of 160 acres.

30261. But Mr. Gorman is the tenant of it, is he?—It seems Mr. Gorman purchased this land.

30262. He is the purchaser of it?—He bought this land.

30263. He bought it?—At a public auction in the Sligo Courthouse in 1894 at £2,665.

30264. Mr. O'Kelly.—How far does he live from the place?—He lives away. He lives in Templevanny. That is his property.

30265. How many miles is that from the farm you have been speaking of?—Eleven or twelve miles.

30266. Has he got any other non-residential grazing farms in the district?—Not in that district.

30267. But anywhere?—I believe he has a non-residential farm about Templevanny.

30268. Does he let out these non-residential grazing farms to local people?—Yes.

30269. Do the local people send their stock there?—Yes, they send their stock.

30270. Does he send any there himself?—Well, he puts some cattle of course, but very little.

30271. Do you know the size of his residential holding?—Well, I don't know the size of farms outside this parish of Highwood, what size the farms are, but I am informed he has a farm near Templevanny.

30272. But the fact remains that he has there a non-residential grazing farm?—Well, I believe he has.

30273. Was this money advanced to him by the Land Commission to purchase this property, do you know?—He bought this farm by public auction.

30274. Sir John Colomb.—I do not exactly understand this. Did he buy the farm or the tenant's interest in the farm—was it a farm put up for auction and was it a sale by the previous tenant, or what?—The representatives of Thomas Rae sold this farm.

30275. Who was Thomas Rae—was Thomas Rae the owner?—Thomas Rae was a farmer.

30276. Was Thomas Rae the owner or was he the tenant that had previously had this farm?—Well, it was the representatives of Thomas Rae that put up this farm.

30277. Did the representatives of Thomas Rae represent the holding held by Thomas Rae previously?—Yes.

30278. Sir John Colomb.—Then was Thomas Rae the owner in fee?

Most Rev. Dr. O'Donnell.—The question is this—was Thomas Rae a tenant or was he a landlord?—Well, I consider he was.

30279. Sir John Colomb.—What was he?—He was a tenant.

30280. Then the tenant's interest was put up for auction—Thomas Rae's interest was put up for auction and bought by this gentleman you are speaking of?—Bought by Richard Gorman.

30281. But was it the tenant's interest of Mr. Rae that was sold? If he was a tenant, and you state he was, I would presume that his representatives were selling the tenant's interest?—Mr. Rae owned this farm himself. This belonged to Mr. Rae. He owned this farm.

30282. He was the owner?—He was the owner. He was owner of the farm.

30283. And therefore his representatives sold the fee-simple of the farm?—Yes.

30284. And it was sold by public auction?—Yes, sold by public auction.

30285. He was both owner and occupier in his life, was that it?—Yes.

30286. Chairman.—All right?—And there are a number of houses I would like to make mention of, Mr. Chairman, which are in an unsanitary condition, and a number in villages with very little apartments, and at the time of the sale we would request the Estates Commissioners to improve the houses in this district that I refer to. I am of opinion it would be of great importance and a big improvement in the condition of affairs if a money grant was given at a low rate of interest to improve the small farmers' houses of the country, as well as for the improvement of their land. And with regard to the Agricultural Department, I would ask to make a few remarks about the breed of cattle. Of course the County Committee have selected Ballymote as a centre but would it be impossible to have a centre selected in some other part of Sligo as the district is poor land..

30287. Mr. O'Kelly.—Is not that a matter for the County Committee of Agriculture—you have got a County Committee of Agriculture in Sligo, have you not?—Yes.

30288. Well?—But they have not the selection of the stock.

30289. They have not?—I believe not.

30290. Suppose they made a representation to the Department, the Department would yield to their view?—But they have not done so.

30291. Why not ask them?—The Department has not done so. They have requested them different times.

30292. And they have ignored the local representation?—The people do not approve of the breed of cattle that they have selected.

Chairman.—That is all the time we can give you because we have lots of others waiting.

Mr. Patrick Nicholson examined.

Mr. Patrick Nicholson.

30293. Chairman.—You have prepared a statement?—Yes. Mr. Henry, in the same district, touched on nearly everything I have to speak of to-day. Mr. Henry gave information mostly of what I had prepared to read to you to-day. Every estate in this district, properly speaking, is congested. There are three or four bad estates in it, that is in Tullycusheenbeg, Ballyglass, and Carntubber, near the town of Tobercurry. In Ballyglass there are seven tenants, and the seven tenants have forty-three acres between them. There are three of them that hold only one acre each. There are three of them on the one "street," and one of the tenants on the "street" has only just the breadth of a house on the "street." He has to go three or four hundred yards away before he gets into his own acre of land, and he has no proper right of way.

30294. He is not a farmer?—Yes. He has only an acre. He has not, properly speaking, any cart-way or such as that, to the public road; he has to go around portion of the ranch to get to the road. There is a large grazing farm there of 500 acres where the tenants were all thrown out, some forty or fifty or sixty years ago.

30295. Does he work for other people too?—He does.

30296. Would not you call him an agricultural labourer?—Well, he is. Of course he works for people round him.

30297. I mean he is more a labourer than a farmer?—Yes.

30298. Mr. O'Kelly.—Has he a farm?—Yes.

30299. I understood you to say that 500 acres were evicted?—It is there to be seen. Some of the people on the outskirts of that farm were chucked out of that place a long time ago.

30300. Chairman.—Was he one of them?—Well, his people were. He got married into the place and his wife's people were. Some of those who were evicted. Some of them that were thrown out were the people on the brink of the bog, and they remained on living round the brink of the bog; and this grazing

farm of 500 acres of good land is there to be seen, and it is let on the eleven months' system, and Mr. Robinson is the agent; and I have it on very good authority that there are one or two big graziers that have too much land—well, enough—already, and they are wanting to take this over the heads of the people. There is some mystery about the ownership of it. There was a Miss Mossman, that died, and her representatives cannot be traced by the tenants, and they do not know the landlord's address.

30301. To whom does this belong?—It belongs to the representatives of Miss Mossman, who died three years ago, and they do not know exactly who the owner is.

30302. What is the townland?—Ballyglass.

30303. And the electoral division?—Cloonacool.

30304. The rural district?—Rural District of Tubbercurry.

30305. Is it in the hands of representatives of Ellen Mossman?—Yes.

30306. I do not think it is 500 acres of land; it is 387?—Well, those might be statute acres possibly, the 500.

30307. These 387 are statute acres?—Well, there was a lot of rough land attached to it, and the people there tell me that there are 500 acres in it. The rate book shows it to be 387¼ acres. And there is a lot of a sort of bog and coarse land attached to it, and there is some very good land in it. And, then, in the other townland of Leitrim, that adjoins it on the other side, there are twelve tenants. There are ten of them and the ten only own forty-eight acres, three roods, between them. One of the tenants holds only three-quarters of an acre, and that was given to him as wild, rough bog, and he cropped it and reclaimed it and has it fairly good land at present. One tenant was fairly well off. He had about twenty acres, and there was a farm there too, and the Congested Districts Board, I think, were negotiating about taking it over, and some way or other they were not satisfied with the title, and the result of it was that it was divided, and one of the tenants got something about fifty or sixty acres. That is the man that had the twenty acres before and he did not want it as much as the small tenants, and another, a school teacher, got twenty-five acres of land, and he did not want it either.

30308. Sir John Colomb.—He did not want it?—Well, the other tenants, I think, had a better right to it. The other tenants had only forty-eight acres between them.

30309. Did either of those gentlemen tell you that he did not want it?—Well, I think they could do well without it.

30310. Mr. O'Kelly.—You think they had a sufficiency of land already?—One had twenty acres, and the other was a school teacher, and the popular opinion is that a school teacher being a professional man should live by his profession, and that the tenants on the estate had a prior right to it.

30311. Sir John Colomb.—Do you mean that a man ought not to get additional land because he is a school teacher?—He was not connected with the estate at all.

30312. And do you want it to be taken away from him?—Well, the tenants do.

30313. Do you mean that under these circumstances the school teacher ought to have his land taken away from him?—Honestly I would say that it should be taken away from him and that he be given an equivalent amount of land in some other place where land would not be so scarce.

30314. Most Rev. Dr. O'Donnell.—Do you know under what circumstances the proposed sale to the Congested Districts Board fell through?—I do. The title was bad, my lord; they were not satisfied with the title. That is my impression, and what I heard.

30315. If you had gone on you would have suggested that after the needs of the poorest men on the outskirts had been supplied, eighty or ninety acres should have been divided among other tenants?—Well, the highest number of acres that any of these men have is seven. Two hold only one acre each, and one three-quarters of an acre, while one part of that farm was given to an outsider, and another part to a man who had already twenty acres. And I say the farms here are altogether too small. My opinion is that a small farm, for a farmer to live on it, ought to be twenty or twenty-five Irish acres of the land around here, which is not the best in Ireland, or in Connaught even. And there was evidence given here yesterday about migration, and I heard about large farmers, that some of them ought to be migrated, and I really think that that would be the best rule, and they would be better adapted for migration. And generally here they own the best of the land, and they would have an opportunity of being transferred to better land, and some of them are anxious to improve their residences and build hay-sheds, and such as that, and if they got farms larger and better than the ones they now hold. I think it would be easy enough to induce them to go. And I think the non-residential farms might be acquired, too, on similar terms if inducements were held out to those men. They might take an equivalent amount of land in some other place where there was not so much scarcity as around here. The drainage of the Moy was referred to yesterday by Mr. Henry. The want of that does great harm. There is a lot of tillage along the banks of the Moy, and when the flood rises the back waters choke up the rivulets flowing into the Moy, and there is great harm done. That flood remains on the land sometimes for a couple of days, and the potatoes in the ridges get soft and they are worthless.

30316. Is the Beatty estate in a congested district?—Yes.

30317. In a scheduled district?—It is, my lord. As the potato crop is the mainstay of the people here anything that would save it would be a blessing. The poorest people suffer most by its failure, as along with being partly their food, it constitutes the food of the poultry, pigs, and, to a small extent, cattle, especially before and after calving. With the exception of spraying, which in many cases does not seem effective, nothing has been done to save this valuable crop. I think new varieties should be introduced to see which would suit this district best. Apparently the Champion introduced in 1880 is the main crop relied upon to the present. It has one great drawback—the tubers do not form until late in the season. I understand that an engineer connected with the Congested Districts Board drew up a plan some years ago, having for its object the thorough drainage of this district, but fearing opposition from the Moy Fishery Conservators nothing was done in that direction. I have been informed that these plans, maps, etc., are still to be had and would be a saving of nearly £1,000 if this work were taken in hand.

30318. Most Rev. Dr. O'Donnell.—Do you mean a saving of £1,000 a year?—No; but in drawing up the plans, my lord, instead of employing now a fresh engineer. These plans, Mr. Doran has told some of the clergymen of the parish, are to be had still if required. Well, about untenanted land, we have about 550 acres. The Rate Book return is 432½ acres. There is Lower Leitrim and Ballyglass that I referred to. That is about all the untenanted lands we have here, and there are a number of non-residential farms, but I think the owners would expect to get too much for them.

30319. Chairman.—You do not say that; you say that their owners would expect more than their true value for them?—Yes, I say that.

30320. Why do you think that?—Some way or other they are loth to part with them. If there was nothing like compulsion tried, and if they were being negotiated for without compulsion, I do not think they would like to give them on the terms they bought them at.

30321. What do you call the true value?—About here I would say that the true value would be about twenty years' purchase of the rental.

30322. How do you know that; what do you mean by true value; would you say that it was the true value if the price did not give the man what he made by it before?—I would not, because possibly no two would agree about that. But some lands have been acquired for burial purposes, railways, and such as that, and they leave the value of the land to arbitrators, and I think the people would be equally satisfied to leave the true value to men such as they.

30323. Would you say it was the true value to give a man a sum of money which did not return him what his income had been before?—Well, I do not know. That is a difficult question, my lord.

30324. You have not thought that out?—I have not.

30325. You have not got any particular basis for your opinion as to what is true value?—My lord, there have been a couple of large farms bought in my neighbourhood within the last ten years or so, and I know what they paid for them, and I know what they would expect now, and that they would expect now 50 per cent. more than they paid, and I say that it

Apr. 20, 1907.

Mr. Patrick Nicholson.

would not be the true value to give them 50 per cent. more than they paid.

30326. They might have bought them very cheap?—Some of them were bought at public auction, and more by private sale. Still I have an idea of what they paid for them in each case.

30327. Lots of people buy things very cheap?—I would take the true value as being what an article would fetch at a public auction if there was proper competition.

30328. But if you went into an auction and bought a cow extremely cheap because it happened that there was nobody else bidding, do you think it would be fair to ask you or to force you to sell that cow a week afterwards for the same price that you gave for it—would you think that fair?—No.

30329. Then that is not the true value of the cow?—No; because he bought it to hold it, and competition was wanting.

30330. And you got a bargain, didn't you; you got a cheap cow?—Yes.

30331. Was the true value of that cow not what you gave for it, because you bought it cheaply?—I would not say you could buy a cow at a public fair cheap, because it was there for competition.

30332. And do you think it would be perfectly fair to take back that cow from you a week or two afterwards at the price you paid at the auction, because you bought it at an auction?—I would not feel very much, of course, my lord, if I bought it at a public auction or public fair. I certainly would not be 5 per cent. of it the loser or the gainer.

30333. And if you bought that cow very cheap at a public auction you would be perfectly prepared to hand that up?—If I bought it very cheap I would not, but there is no such thing as getting a cheap bargain at an auction. At any rate I do not see it round here.

30334. Most Rev. Dr. O'Donnell.—But you are prepared to say that a fair price should be given for the land?—Yes.

30335. Mr. Sutherland.—There are two parties to be taken into consideration in fixing a price?—Yes.

30336. Could you make a bargain and fix a price having regard only to the interests of one side?—Undoubtedly not.

30337. And it is only the adjustment of these claims that is necessary?—Yes, you must take each side into consideration.

30338. And your argument is that the public arbitrators would do that for public purposes?—Yes; I think the public would have confidence in them.

30339. Most Rev. Dr. O'Donnell.—You think they would fix a fair price?—I think so.

30340. Chairman.—Would you be prepared to leave it in their hands?—I would, and so would the general body of the public here, in my opinion. This list here gives an account of the lands that are damaged by the Moy.

30341. Mr. Sutherland.—I was going to ask you about that. Where is the obstruction?—It accumulates for years and years.

30342. Where is the principal obstruction to the river's flowing freely?—In this little parish there are three or four obstructions. It seems there is a conjunction of rivers near where it leaves the parish, and it does a terrible lot of damage there, and even cattle and sheep are sometimes surrounded by the flooding and get lost.

30343. How many miles along the banks does the overflowing extend on each side?—Well, from where it enters this parish till it leaves it it is about five miles. I went into the townlands through the parish, and I find it damages something about 574 acres.

30344. Where are the conservators?—They are at Ballina, and they have water bailiffs all along to watch the fish during the year, and I am informed that the Congested Districts Board were of opinion that these parties would not like them to interfere with the river.

30345. And those Conservators have no power to do drainage?—They did not think they had. However, they do not do it.

30346. Do you know whether they have powers to do it?—I do not know whether they have powers or not.

30347. Sir John Colomb.—The Conservators are a body established by Act of Parliament for the preservation of the fish as a national asset?—I did not know that.

30348. You did not know that?—I did not.

30349. All their powers are for the preservation of fish as a matter of great public importance to the whole population?—I find that about 574 acres in the townlands that lie along the Moy in this parish are damaged—pasture land in some cases, meadow land in other cases. I see in some cases damage to the cocks of hay when there would be floods of water all around them in the harvest time. Now, with reference to the Knox estate, that estate was in the year 1896 offered for sale to the tenants. I was in the office when he asked eighteen years' purchase, and the sale fell through then. There were mortgages, I think, upon it—I am sure that there were, and the agent said that himself—and I think he got them changed, and got money at a cheaper rate of interest. The sale fell through, and there was nothing more about that till the 1903 Act was passed, when the tenants approached him again, and he asked twenty-six years' purchase.

30350. Mr. Kavanagh.—Was that on second term rents?—Yes.

30351. The first was on first term rents?—I do not know whether there were any second term rents at that time or not. He offered the estate at eighteen years' purchase to the tenants, and they offered him sixteen, which was about what was going at the time. Sixteen was the highest, and they offered him that, and he got the money, it appears, at a cheaper rate of interest, and he changed the mortgages, and as he got relief at the time there was nothing about it since. Before the Act of 1903 four estates were sold in the parish varying from fourteen to sixteen years' purchase. Under the Act of 1903 four other estates in the parish were offered for sale, but as the landlords demanded from twenty-three and a half to twenty-six and a quarter years' purchase, sales were not carried. On the Fitzgerald estate all the good land was in the hands of the landlord—a large farm in the centre of the estate. When the Congested Districts Board bought the estate they divided this farm amongst the tenants. The Board also drained, fenced, and made roadways there; they also changed some of the tenants who occupied some very wretched dwellings, into good substantial houses—one of which they built, and some more which they remodelled out of good substantial farm buildings erected on the landlord's farm. Mr. Henry gave details with regard to direct sales between landlords and tenants yesterday. We had a couple of instances of it here in the parish. There was an estate with bog on it for the tenants, and that was not included in the sale, and when the sale was carried through the tenants found that an outside landlord had bought the bog, and taken it from them. And a similar case occurred where the tenants were allotted portions of a bog, but they have no right of way from their own lands into it. They have no passage to get to the turf, and it is perfectly useless to them, and they cannot use that bog from that day to this. Before the landlords are paid I think all these details should be attended to, and that the Estates Commissioners or somebody should see that the tenants had access to the turf without trespass. And sometimes there are tried actions amongst themselves here for trespass. Very often the shopkeepers advance the rents, to poor tenants especially. I know of cases where an ejectment process costing 10*s.* 6*d.* used to be clapped on each of them if they were a day or two late. But they generally applied to gentlemen in the town who obliged them with a loan of money for a month or two, and this money was of course paid back punctually, as coming on Christmas each year the American money orders arrive, when the farmer does his best to pay up nearly all he owes. In the month of December each year I often saw in the post-office at Tubbercurry a fair sized table covered with invoices of American money orders. To the best of my opinion there could not be less than 500 orders on that table on some days. This money helps to pay for clothing, foodstuffs, etc., and in some cases is part-payment of the passage money, outfit, etc., advanced to the emigrant or his people by the merchant years before. When a few bad years come in succession the people have to depend on the shopkeepers to supply them with food, hoping, when their children would get stronger, to pay off this debt by their earnings in England or America. I know personally farmers who are obliged with the loan of

money by at least two business houses in Tubbercurry, besides having money on a six months' bill in the bank in hopes of better times to clear up all. The tenant farmers who could live on their farms without receiving outside help are very few. Most of the small farmers take from one to two acres of con-acre yearly for potatoes and oats, and they pay for this from £5 to £7 an acre to the larger farmers, who generally own the good land. Some of these large farmers are non-residential.

30352. We had a great deal of evidence yesterday about the conacre business of the small farmers. Of course they must look out for some good ground capable of producing a good crop outside of the mountain holding, and they generally stock half an acre or an acre or two acres in order to have good crops for the rent they have to pay, £6 or £7 an acre, for that, of course. In my neighbourhood they are paying £6 10*s.* for it, and the land is not very good, and that is paid by farmers who have one or two or three cows themselves in order to nurse their own land. If they broke up or tilled all their own good land they would have nothing for the cattle; they must nurse it on till it comes to grass again. And each year they have an acre or half an acre of potatoes, and some of them have two acres, and so on, and of course this conacre rent is a great drawback to them.

30353. CHAIRMAN.—If migration was effected and people were brought down from the mountains and given some grass land, would you be willing to see these men prevented from letting their land out in conacre?—I would not.

30354. Supposing they went on letting their land out in conacre would not the land deteriorate very much?—Do you mean if the people got new holdings?

30355. Yes?—Well, of course, they would be the best judges how to manage their own farms. They would take very good care that they would not let it out if they possibly could, my lord.

30356. Supposing they did let it out in conacre would not the land deteriorate very much?—It would.

30357. And would not it be doubtful if they would go on paying an annuity to the State for sixty-eight years?—I do not think it would be doubtful at all, if they only took one crop of rye-grass off it after tilling it would not deteriorate very much, my lord. I often do it with my own land, and it is not very good, and at the same time when I allow the clover aftergrass, which is sometimes 1½ feet high, to rot on it it does not deteriorate very much. But I speak of good land. Of course where the conacre is taken is extremely good land, and I say that the staying power is there. It does not do, however, at all with light land to conacre it.

30358. Mr. O'KELLY.—How many acres do you farm yourself?—I have about nine Irish acres of what you call light land, besides seven or eight acres of bog.

30359. Sir JOHN COLOMB.—Irish acres?—Yes, and the rest of the land I hold is mostly light. If you were to plough it you would dig it all up to what you call the subsoil, the white bit that is underneath. There is no staying power, and you have to nurse it. If you were to let such land as that reclaimed land out in grass without tilling or digging over for eight or nine years, it would not be worth half-a-crown an acre. It would grow scarcely anything but moss and rushes and heather.

30360. Most Rev. Dr. O'DONNELL.—You state here, and we were told yesterday, that it is good land that is taken in conacre, for the purpose of having good crops?—Certainly, my lord.

30361. Is it a fact that a crop of potatoes, besides being better in quality, is somewhat more secure from blight on good land than on the poor mountain sides where these people live?— Oh, my lord, there is a vast difference altogether between them, and on the good strong land you have the advantage of partial immunity from disease, and the staying power of the stalk helps, too, on such land. If you were to put a crop of potatoes on some of those rich grounds, and plant another crop on this sort of reclaimed ground, and give them the same treatment, the crops that would be planted on the reclaimed ground would be withered and blighted, and gone away three weeks or a month before what you would put on the good soil. The staying power is not in it. You would see the stalks wither away three weeks or a month before they would decay on the strong land, even without spraying at all. And then, of course, the nature of the crop of potatoes is not at all to be compared with what you grow on the good land, and of course the yield is far less on the bad land. On this light land the potatoes have to get two mouldings, and then, as I said, when forming the ridges with a spade or plough or loy you dig up from the gravel. After the first moulding you do not leave a bit to be put up for the second moulding, and the result is the stalks are not properly earthed, and the weeds will come, and you will have to weed them and manure them. They take double the manure that the rich land will take. Even then you will not have nearly the crop that the rich deep soil would produce. You have to watch them, *i.e.*, to spray them often, or else you lose them practically. The Congested Districts Board gave a grant of £100 yearly to the parish. It is administered by a Parish Committee, and has very much improved the dwellings, out-offices, and general surroundings of the small farmers. At the time it was first introduced very few of the farmers had an out-office roofed with corrugated iron, but at the present time the parish is fairly well dotted with them; the dwelling-houses have been greatly improved owing to grants given for that purpose. I was a member of the Parish Committee since its inception here until I was appointed parish secretary over a year ago, which position I hold at present, and I know some people who very much need to improve their dwellings and erect an outhouse, but they are too poor to take advantage of a grant for that purpose, as in the case of the poorest person only one-third of the estimated cost can be given by the Parish Committee. I think where the applicant is exceptionally poor and under £4 valuation, the committee might have authority to give a grant of one-half the estimated cost. I know several who would be unable to take advantage of the grants allocated to them if it were not for their neighbours who supply horse and skilled labour gratis. As to industries we have, unfortunately, none here. If the girls of the district could get employment at, say, 5*s.* to 9*s.* a week, and the boys constant work, at, say, from 6*s.* to 12*s.*, thousands would remain at home instead of rushing to America. During three or four months of the year a number of men and boys of the parish go away to England for the harvest. Taking into account their expenses going there and coming back, together with wet weather, time spent looking for work, etc., I think if they had constant work at home with medium wages they would be better off and more content. The County Council spend a considerable amount of money ostensibly for the purpose of improving the breeds of cattle, horses, and other live stock. No doubt this is done with the best intention, but I think a certificate of merit would be sufficient in such cases. The recipients are generally the independent portion of the people. If the moneys used for these purposes were doubled and utilised in starting cottage industries or local factories capable of giving employment to a number of hands, the general body of ratepayers would scarcely complain as a considerable amount of this money would find its way to the poorest portion of the people, some of whom might otherwise be a burden as inmates of the poorhouse or recipients of outdoor relief.

30362. CHAIRMAN.—You want to see something done which would increase the demand for labour in the district and prevent these people going off to England?—Yes.

30363. Now, the creation of a lot of holdings of thirty acres would not do that, would it?—It would help to do it, my lord.

30364. Why would it help to do it?—If you had twenty-acre or thirty-acre farms you would have a good deal more demand for labour.

30365. Would not the owner himself be able to do it well?—Yes, but there might be an extra hand required occasionally on a farm of twenty acres; sometimes a farmer has not grown-up sons, and there would be nobody but the farmer and his wife, and they could not attend to all those matters which have to be attended to on a farm.

30366. Not on twenty-five acres?—I would say not.

30367. Do you not think that a man that got twenty-five acres of land would be able to run the thing himself without employing labour?—If it would be a nice farm of twenty-five acres, with a fair proportion of it in tillage, he would be able to employ a man almost the whole year round.

Apr. 20, 1907.

Mr. Patrick Nicholson.

30368. Take a holding of twenty-five acres of grass land, how much of it do you imagine the man would till?—I would say, generally speaking, that one-fourth of the twenty-five acres would be sufficient, or five acres. I would say five acres would be enough, and that would be only a fifth.

30369. Five acres would be the most that he would till on a twenty-five-acre farm, You would not like him to till more than that?—Well, I think not.

30370. Well, could not he manage five acres by himself?—No, he could not, my lord.

30371. He could not manage five acres by himself?—He could not, my lord.

30372. He would want labour?—He would.

30373. How much tillage do you think he could manage himself—three acres?—Well, it would be the limit of it. He has many things to do besides to attend to the three acres.

30374. Do you not think that his temptation would be to till as much as he could manage himself and let the rest remain under grass rather than till a little more and employ labour?—Well, the tendency was sometime ago to let the tillage run down, but I think lately that is running up a small shade. It is not altogether as bad as it was; it was ruinous to till and sell it at that price. Oats some time ago here were sold at what we call 11s. a sack. Well, oats are not sold at 11s. now.

30375. But if you have a man with a fairly big annuity to pay every year, he wants to feel certain of his income; he is going to be sure to get in something?—Yes.

30376. Is not it more likely that he will be sure of getting in something if he lets the land remain under grass and sells the milk of a cow to a creamery—is not it more likely that he will be sure of getting his annuity paid that way than if he works it in tillage?—It is not, my lord, because you want to run both in conjunction. You want to have roots for the cattle.

30377. Oh, yes, a certain amount. But would he be likely to embark on more tillage than he need have, because of the uncertainty?—Well I think a man with twenty-five acres would be certainly safe in tilling five acres of it even with the profits on cattle and selling milk to the creamery. That would be two acres for meadow, what we call rye grass.

30378. Supposing they did not till, supposing they only tilled potatoes and allowed the rest to remain under grass, the district would not benefit very much?—No; nor do I think that it would be a profitable system, my lord.

30379. Supposing they did do that, what would you do—would you try to compel them to till?—I think myself—of course it is only my opinion—that the grant-in-aid that they get out of the rates should be withdrawn from some of those people.

30380. Mr. O'Kelly.—Do you mean the agricultural grant?—Yes; for they are practically of no benefit to the community at all.

30381. Chairman.—That would be a means of compelling them?—Indirectly it would.

30382. You stated in your evidence earlier that you would be rather disposed to allow these people to have a free hand in the way they chose to run their farms, and that you would not be in favour of seeing conacre prevented and that you considered it was better to allow them to use their own discretion as to the best way?—Well, my opinion is that they would manage it in a mixed system of grazing and tillage. I am perfectly sure that if the people had fairly good land they would be anxious to till it. I know them to go four miles away and take conacre, and they never did it before these late years.

30383. They take conacre now because it is absolutely necessary for them to grow potatoes?—Yes.

30384. But would they till more than that; they might till more than would be absolutely necessary for them, and the question is whether they would till more than that?—I do not think they would, my lord. because I think if you gave the majority of the people farms of twenty-five acres there would not be so many looking for conacre then, and they could take in a few grazing cattle from better-off neighbours. And young people generally are getting inclined to put a little money together and they buy a calf or a heifer, and they send them to farmers that are run down occasionally in circumstances.

30385. Is not it much more likely that that is what would happen, that the man to whom you gave this 25-acre farm would take in the cattle of his neighbours in the same way as the big men do now?—I am sure he would if he would not be able to stock it himself.

30386. He would take in stock?—Undoubtedly so, because he would not like to run down his farm of land.

30387. And in that case he would only till the minimum amount of the land that was necessary?—Possibly.

30388. And they would not give the same amount of attention to the growing of crops?—You would not have double the amount of tilling that there is now, but in some cases not very much less. As far as turnips are concerned, they are not very much grown by the farmers who have holdings of light reclaimed land. I have often tried Swedes, and they were a perfect failure. The soil was not deep enough. And I think, my lord, about the points that were touched upon yesterday about these mountain people, and other people with small farms, let them have at least five acres of good land, in addition to their old farms, as has been done at Tullycusheen for some of the tenants living on the outskirts of the bad ground. They gave them additional plots of five acres in the centre of the grazing farm, and those people can now have their crops produced in succession, and when one portion is under tillage there is another field for meadow, and they get the young cattle raised on portion of it for the season.

30389. Have you any personal knowledge yourself of any estate that the Congested Districts Board have bought and striped out in holdings?—Only this Tullycusheen. I live on the borders of it.

30390. And how long have they had them?—The Board have had it for two years.

30391. And they enlarged the size of the holdings?—They did, except in one or two cases, where the farms were non-residential and held by small farmers on an adjoining estate.

30392. Do you know any case on that estate where the enlargement of the holding of a man led to him employing labour?—Well, indeed, no, my lord, because there was one reason, though you might not remember it very well, that previous to this additional land being given to them they were almost all labourers themselves. Previous to getting their additions they used to go to other districts and pay £6 or £7 an acre for conacre, and since then they have had no occasion to go.

30393. And are there no men on that estate who now have twenty-five acres or twenty acres of good land?—Well, none of them have. There were only 100 acres there and there were twenty-one tenants, and eighteen of them got additions or new holdings.

30394. In the new holdings which they got?—They were fine new holdings, but there was not land to give twenty-five acres each, and if you did, then you would have no additions to give to some of the others.

30395. These people that got new holdings, would not you call their holdings economic and self-supporting?—Well, I think the largest is about nineteen acres, and I think it a small shade to some.

30396. But at any rate, none of them employ labour?—No, except occasional horse labour.

30397. Most Rev. Dr. O'Donnell.—What are they doing with these new holdings?—Well, they are tilling them. In the first year they let some of them out in conacre because there were fines levied on them by the Board, and to make up these fines they came in here and they got the money in the bank; and even the Board themselves, my lord, gave out conacre to the tenants the first year, and to show the reasonableness of what the Board did they did not get £6 or £7 an acre for it. The Board charged the tenants only 30s. an acre. The tenants then when they raised the money in the bank let out only possibly an acre or two in conacre, and the fines were handed back again to the most of them, owing to Land Act of 1903 being passed, and, as a matter of fact, they have not let conacre since the first year, the first year it is used for potatoes and secondly for oats. They had to make up the fines as best they could, and they could not withdraw from their agreements in letting the conacre for two years.

30398. They had to take the best means to hand in order to make the money they had to pay?—That is so, my lord.

30399. And they are having this advantage, they are getting back the fines?—The fines were handed back in almost every case, my lord.

30400. Are those men that got enlargements of their holdings tilling more than they did when on the small patches?—They are tilling about twice as much, my lord.

30401. You said that they were not employing labour. Are not the holdings of the class that would be worked by a man and his own family?—They are, my lord.

30402. They have not reached the acreage at which it becomes expedient to employ hired hands?—I think there should be more acreage, but the land was not too bad on the new holdings.

30403. I was glad to hear what you stated to Lord Dudley, the Chairman, about the price of cereals going up now so as to enable the people to return to tillage?—There is, my lord.

30404. Is there a marked tendency to return to the land?—There is, my lord. It is not very much yet, but it is on the upper grade.

30405. Do you think that those men with holdings of moderate dimensions would be more disposed to tillage if there was a practical instructor planted in their midst?—I am sure it would be useful. There was a lecturer who went round here the last few years and attended the National schools, where he lectured, but the people have not much faith in those people that go round, and the farmers think it is all nonsense, and I know it is nonsense. They preach partly about tillage and getting on, and I know the farmers don't believe a word of it, and they speak about phosphates and things the farmers don't know anything about, but after one or two turns people would not go to them at all.

30406. CHAIRMAN.—It is possible that you could not get all they mean in one lecture, but you would want an opportunity of talking to the man afterwards?—Yes.

30407. Most Rev. Dr. O'DONNELL.—A practical farmer would think that he had more in his head and knew more about the matter than the lecturer?—I am sure of that, my lord.

30408. Have you children at school yourself?—I have, my lord.

30409. Now, with a view to the promotion of tillage in the country, what would you think of a school that provided agricultural knowledge of a practical nature for your boys at school?—I think they could not acquire a better knowledge.

30410. That is to say that if one of your sons is going to be a farmer, you think it would be a good thing that from his tender years he should be gradually instructed in the principles of agriculture and the practice of it?—Certainly, my lord.

30411. Do you think it would tend very much to extend the area in tillage?—I think it would be of use for those people who would become farmers themselves. When I was going to school myself I got no agricultural instruction, and I had to have it from my own experience; and I think it is the same still; it is worse, as a matter of fact, because the ordinary education is not good.

30412. Sir JOHN COLOMB.—You stated that oats were rising in price?—Well, I think so.

30413. Is there anything else rising in price that would encourage an agriculturist to employ labour—you said you looked to a rise in prices as probably encouraging people to employ labour, and you instanced oats?—Yes.

30414. And are other things rising?—You know oats are used for a variety of purposes even if they do not sell them. On the creamery system they feed cattle with oats, and if you give them to the cattle they will have more milk and it will be of good quality. You get a good price from the creamery firm for it, and there is an advantage any way you look at it.

30415. There is another point with respect to what you first said. Are there any labourers' cottages building in this union?—There are none built yet.

30416. Do you know that a labourer's cottage will carry with it an acre of land?—I believe so.

30417. You have described very clearly the case of a labourer living in a street with an acre of land some distance from his holding. When Lord Dudley asked you was he not a labourer you said you considered him a farmer. Now I want to ask you do you consider a man having a labourer's cottage with an acre of land a farmer?—Oh, no.

30418. What is the difference between a man living in the town and having an acre being considered a farmer and a man living on an acre in the country not a farmer?—The difference is this that a man living in the town does not like to go out to do agricultural work for a farmer or anything outside the town; but anything that he can turn his hand to in the town generally pays him better than if he went out to a farm where he would have to do a good deal harder work for possibly less wages. He would not like to bind himself down to agriculture.

30419. How do you describe a man living in the town who does not like hard agricultural labour as a farmer?—This man that I described is not living in the town at all.

30420. You said he lived in the street?—In the street—no, no.

30421. In the village?—No. The three houses are built together, and the three are built on the one "street."

30422. As a rule does a farmer with twenty-five acres keep a horse?—Well, not in all cases.

30423. Do you think that there are more farmers with twenty-five acres that keep a horse than farmers with twenty-five acres who do not keep a horse?—Well, I would say there are more without them in this district.

30424. Do you consider that a twenty-five-acre farmer who has a horse might work five acres of tillage?—Well, he could of course, but he has to get swapped labour. For that horse he has he will get the work of the man that has no horse. They will go, their sons or the farmers themselves, and give their work for that of the horse.

30425. If each had a horse they would work in a friendly neighbourly manner using two horses?—That is what the owners of the horses do.

30426. Could not each of those farmers work five acres of tillage?—They could, but there is some work that a horse cannot do.

30427. May I ask you where there is a case of a neighbour with a horse, could not each of the two men work five acres without calling in labour?—Ah, they could not.

30428. Or very little labour. Well, the two could keep a labourer between them?—They could very easily.

30429. Mr. SUTHERLAND.—Do you not think that the absence of horses keeps down the area that is under tillage?—Well, I would think so.

30430. And if they had more horses where they could plough there would be a great saving of time and money perhaps and more tillage?—That is so.

30431. Sir JOHN COLOMB.—Do you agree with the distinction drawn by a witness between an economic holding and an uneconomic holding, that an economic holding is a holding on which horse labour would be employed?—I think an economic holding should be able to support a horse.

30432. Do you think that it is, on general grounds, a fair definition of the difference between the character of an economic and an uneconomic holding that a farm that necessarily keeps a horse may be fairly considered as an economic holding?—Well, it is easier to keep a horse. Still if he keeps a horse for the purpose of working his farm he should have a farm of twenty-five or thirty acres. Well, now, there is one point I would like to mention—non-residential farms. Now, there are 653 acres in this parish alone that are non-residential farms, where the owners are not actually living on them, and I would say, too, that the tenants are anxious to buy, but the landlords' demands are unreasonable. Some of the large tenants and the non-residential ones, too, would buy direct from the landlords, but the small tenants prefer to buy through the Estates Commissioners. I expect the Government will amend the Land Act in order to deal with unreasonable landlords. Well, there were four farms sold in my neighbourhood inside the last ten or eleven years, and I have personal knowledge of them, and the point that struck me most forcibly was that the large farms are more easily acquired than the small ones.

30433. Sir FRANCIS MOWATT.—Easier to acquire?—Well, they would not get as much money in the open market, that is the plainest way to put it.

30434. Mr. O'KELLY.—They have not so many competitors for them?—Yes, that is the way I account for it. There were two farms; there were about forty acres in one and the price was about £400, and there were about 42 acres in the other, and the price was £400. One of them was bought at a public auction and the other was bought by private sale.

Apr. 20, 1907.

Mr. Patrick Nicholson.

There were two small farms sold by public auction, too. One of them was about fifteen acres, and there was some middling bad land or bottom land; it was not very good. It went about £250, auctioneer's fees and all. The other farm was about eleven or twelve acres; there was some bottom land on it, and it went about £250, too. And I think the larger tenants might be migrated. They are living on the best of the land, and if they got other land and if inducements were held out to them to give them land better still they might go, and they are generally in a position to get loans to stock the land from the bank. The bank would oblige them sooner than oblige the small farmers, and besides that, too, if they would consent to go you would have fifty or sixty or seventy acres the migrants farm. You would only have to build one house for him if you transferred him away to where there would be waste land, and if you transferred the small tenants you would have to build six or seven houses for them, and in the matter of money cost it would be cheaper than to transfer six small tenants.

30435. CHAIRMAN.—And would you like to see the big farmers get land somewhere else and migrate?—I would not ask to compel them, but I think inducements should be held out to them. I understand that for every tenant that is migrated presently there is a loss of close on £100 to the Estates Commissioners or the Congested Districts Board. They set them up and build a house for them, and they lose about £100 on each of them, and I think that in some cases some of the large farmers presently might be inclined to build improved residences and such as that, and if they got some help or an inducement held out to them in that direction it might be very easy to induce them to move.

30436. You are an intelligent man. Do you think it would be a good thing for the country-side generally to have all the holdings more or less of one size—do you not think that it is a good thing, as an example, to have some larger ones?—I think it would be a good thing to have them.

30437. You do not want to see all the holdings stereotyped to one size?—No, and some of them might like them small.

30438. And you would have differences?—Yes.

30439. And would not it be better to have larger farms, so that if a man is thrifty he has more chance later on of getting a better place?—Certainly.

30440. If you had everything stereotyped to one level there would be no opportunity for him to better himself?—That is so.

30441. Sir JOHN COLOMB.—And you would not interfere with one tenant purchaser buying from another tenant purchaser, would you? Take the case of a property acquired by the Congested Districts Board and portioned out into thirty-acre holdings. We all know that some men will be more successful than others; some men unfortunately will go down and others go up. Take the case of two men alongside one another, put in that position by the Congested Districts Board. One man goes down, the other man goes up, and the man that goes down cannot meet his annuity, so the farm has to be sold, would you allow the other man to buy that farm?—Why not? But I would prefer that a man that had no land should get the preference of it.

30442. And then begins the growth of big farms over again, does it not?—Well, I think if there was some limitation that the State could at any time take over that farm again by handing the man back his money I think possibly that would be a good thing.

30443. And being so intelligent, and having given so much attention to these matters, you have probably yourself read some evidence that we have had that affirmed that one man ought to be prohibited from buying from another. Do you agree with that?—I would not.

30444. You would leave it to the natural working of a man's thrift and industry and let it have its triumph by increasing his area?—I would, but I would have some clause in to the effect that the State or whoever would be, like the Estates Commissioners, in the position of landlord should have the power if a man would accumulate. If you gave him twenty acres he might acquire another twenty acres, and he might acquire fifty acres by buying small patches.

30445. You would prevent any such man from increasing his land by his industry and his prosperity and his money. You would prohibit that man from buying more than would make up his farm to fifty acres?—Well, I would not prohibit him if there was sufficient land, but I think if he had fifty acres he could knock a fairly good living out of it, and as the people round here stand I think that on a farm of fifty acres a man could get a living very respectably.

30446. Would you go so far as to say that in the case of an estate bought by the Congested Districts Board and parcelled out into holdings none of those men should ever hold more than fifty acres?—I would not.

30447. You would allow the operation of the law of the survival of the fittest?—I would, but of course my suggestion would be that there should be some clause giving power to the State or whoever would be over this land that if this land were required at any time, by giving him back his money and possibly something more, if he had acquired fifty or at most 100 acres, the State should be empowered to take any further lands purchased by him.

30448. CHAIRMAN.—So that it comes to this that you would put a limit to the power of acquiring land. A man with fifty or one hundred acres would not be allowed to buy any more?—Well, I would not prevent him from buying it, but at the same time if it was required at any time, say for an occupying tenant, I would like to see that the State would be able to take it over and hold it.

30449. That is that he should give it back again?—Yes.

30450. Sir JOHN COLOMB.—And having purchased this land by the use of the State's money to set small tenants up, so in process of time some men go up and some go down, and thus accumulation goes on, and if a man by his own thrift has in the course of time become a big farmer, would you then apply the principle of compulsion over again and redivide?—I do not think he would feel the principle of compulsion very much, because he would know that when he was buying more than 100 acres he was doing it at his own risk.

30451. Mr. SUTHERLAND.—Would you have this process continually going on?—I would. I would not like to see a large farm of 500 or 1,000 acres at any time accumulated in this district.

30452. But they have accumulated in the past in Ireland?—Well, in the past they did everything to hunt the people out of the country.

30453. Are you of opinion that the same process might set to work again?—I am afraid that it would. I do not think that if a man has enough money that he should be allowed to buy up the whole world.

30454. You think the State should look that it does not take place?—I think if you drive people out of a district it will not be an improvement to it.

30455. If you are putting the tenant in the position of the landlord you cannot well prevent him from doing the same as the landlord was doing before. That is the difficulty?—Yes.

30456. Mr. KAVANAGH.—Would you be against subdividing?—I would not like to see them anything under twenty-five acres.

30457. But you would not?—No. Well, not round here. I am not accustomed to what you call good land. I have seen evidence that was given before this Commission by Mr. Fitzgibbon to say that a man could live very well on twelve acres. It is possible that twelve acres of good land would be better than twenty or twenty-five acres of the land round here. The land round here generally is not worth more than 15*s.* an acre. By adding the rates to this you would bring it up to about £1.

30458. CHAIRMAN.—It is extremely doubtful whether a man with twelve acres could make a living out of the farm?—It is doubtful. It would not work out here very well, because there are such men as these round here, and they cannot live on the farms, and they have therefore to go over to England for three or four months of the year and their sons have to go with them when they are strong enough.

30459. Mr. KAVANAGH.—What in your opinion is the smallest size of an economic farm?—I would not like to see them under twenty acres.

Mr. Patrick Dyar, Tubbercurry, examined.

30460. Chairman.—I think you are not a farmer yourself?—I am not a farmer myself.

30461. You are foreman in a mercantile house?—I am manager in one of the principal houses in the town, my lord.

30462. Tell us your address?—Tubbercurry.

30463. Mr. O'Kelly.—Are you a member of any local body?—Not of the District Council. Not except of the Town Tenants' Association, the United Irish League, and some others.

30464. Chairman.—What is the shop in which you are employed?—The man with whom I am employed is Mr. Cook here. He is chairman of the District Council. He is a general merchant. I have a good knowledge of the conditions and needs of the people in the district and for some miles around. The entire district within a radius of seven miles of Tubbercurry ought to be acquired and dealt with by the Congested Districts Board. Almost the whole of Tubbercurry parish, the whole of Curry parish, the whole of Kilmacteigue, and portions of Mullinabreena and Bunninadden are very much congested.

30465. Are they scheduled now or not?—Well, portions of them are scheduled, and a great deal of them are not. The parishes I give presently are the ecclesiastical parishes. They are not the civil parishes, because the people generally are more familiar with the geography of them in that way. There is a considerable quantity of untenanted land in Mullinabreena and Buninadden, and an abundant supply of untenanted land in the neighbouring parishes of Collooney, Riverstown, Ballymote, and Keash.

30466. When you talk about untenanted land you mean land in the possession of the landlord—you do not mean non-residential holdings?—Well, I stretch the definition, my lord, in my way of looking at it, because whether the land is in the possession of the landlord or owner, or whether it is the land of a tenant, or grazier, or middleman, I look upon it precisely in the same way so long as it is not occupied by a resident tenant or a resident landlord.

30467. But in returns of lands which are "untenanted lands" that, of course, only means land in the possession of the landlord?—Sometimes you have difficulty in ascertaining whether the land is tenanted or not from the way things are fixed, and my way of looking at it no matter even if there are twenty-five middle owners between the occupying tenant or eleven months' man, and the landlord, I do not care whether they have mortgages or debentures, or deferred shares in the land, my impression is that so long as the land is waste it ought to be acquired and used for the purpose of relieving congestion.

30468. By waste you mean under grass?—Under grass, and used for fattening purposes, and not used for dairying purposes, or anything of that sort. There is a considerable quantity of untenanted land in Mullinabreena and Bunninadden, and an abundant supply of untenanted land in the neighbouring parishes of Collooney, Riverstown, Ballymote, and Keash. By drawing a line from Bunninadden to Collooney, thence to Riverstown, Ballyrush, Keash, and Bunninadden you get a rough boundary of a fertile district from which the tenants were practically wiped out during the clearances of the forties and fifties. Large tracts of land sufficient to provide economic holdings for between five hundred and six hundred families, besides enlarging the holdings of the present small occupiers and still leaving ample grazing lands, are untenanted or not occupied by resident tenants or landlords in this area. The change most needed in law is authority for the board to acquire compulsorily, but on a reasonable basis of compensation from the present owners, lands which they themselves or their predecessors acquired compulsorily for their own private use and benefit, and for which they rarely if ever paid any compensation. Short of granting compulsory powers to the Board, some good might be done by giving the County Councils power to withhold the exemption or abatement in poor rate at present reverting to the owners of untenanted lands through the operation of the Local Government Act, 1898. Under the present system of taxation the poor inhabitants of congested areas pay in duty on their tea and tobacco, whiskey, porter, and other commodities, money which the Government virtually hands over to the large landholders and large graziers. Of course the small farmer gets what is supposed to be his share, but it is inconsiderable, and the people most entitled to its benefits get practically none, the people least entitled and least in need get the lion's share. The County Councils ought to be empowered to levy the full rates regardless of abatement on all untenanted lands, and on all large holdings, and any surplus funds retained in the local taxation account as a consequence ought to be applied exclusively by the Council to improving the condition of the people in congested areas—the money rightly belongs to them.

30469. Sir John Colomb.—What money do you mean belongs to the small holders?—The money that is handed over by the Government to local bodies, that is, to County Councils and such bodies, in relief of taxation.

30470. Do you mean the Imperial money given to the local bodies for the relief of taxation?—I do not call it Imperial money, but money collected from the Irish taxpayer.

30471. Well, we will call it State money?—Money that is levied from the Irish taxpayers, that consume whiskey, porter, and other commodities, and handed back to the local bodies to go in relief of local taxation. But the people that are least entitled to it and least in need of it, that is the large landholders and the large graziers, get the bulk of the money under the present system. Bullocks do not pay taxes, nor do waste lands pay taxes. That money is raised by the poor inhabitants of the congested areas who drink whiskey and beer and porter, and smoke tobacco, and the people who get the lion's share of it are the large landholders and the large graziers.

30472. Mr. Kavanagh.—And how could you help that?—I would give the County Council power to levy the full rate, regardless of the abatement, on untenanted lands and large landholders, and any savings that they would effect by that means I need not say that I would make the Government pay over to the same bodies as at present, because from my way of looking at it they are even now swindled out of a great deal of money that they ought to be given.

30473. You would put full taxation on the unoccupied lands?—Yes.

30474. And the Government contribution you consider should be for relief of the small landholders?—Yes. I would allow the County Council to use it in the way they considered best for the relief of congestion, and for the relief of the people, and to apply it in whatever way they might consider best for the benefit of the people in congested areas.

30475. Sir John Colomb.—I understood you to say in reference to grazing farms that bullocks do not pay taxes?—Yes.

30476. And I suppose rolls of cloth do not pay taxes?—No; but the man that sells the cloth has to pay income tax on his trade profits, and I suppose the fellow that wears the cloth eventually has to pay his share of that.

30477. But he has not to pay any local taxation on the value of the wool?—That is quite right. But there is another point. Now under the present system a man in a congested district who has a little house and garden valued at, say, £1, pays at the present time approximately 4*s.* or 4*s.* 2*d.* in the pound on the valuation of that little house and garden, whereas the landholder up in Doobeg has 1*s.* 6*d.* or 1*s.* 8*d.* of his rate paid for him by the Government.

30478. I just want to understand your view in reference to the bullocks. Are you aware that land in the owner's own occupation is taxed on one-third more than the valuation?—In what way?

30479. For the income tax?—I am not aware of that.

30480. But you may take it that is so?—But what I am aware of is that the owner pays a tax on one-third of the land occupied by himself. At least that is my reading of the income tax schedules that I see.

30481. A third of the valuation?—Consequently, at the present rate—we will go into the figures for a moment—at the present rate of 1*s.* in the pound he would pay on one-third of the valuation, and that would be 4*d.*; so that the owner of the grazing ranch pays income tax to the Government at the rate of 4*d.*

Apr. 20, 1907.

Mr. Patrick Dyar.

in the pound on the full valuation, which is equivalent to 1*s.* on the third of the valuation, and if he gets back through local taxation 1*s.* 8*d.* does not he benefit still?

30482. Sir Francis Mowatt.—Are not you wrong in saying that what the landlord pays is income tax on one-third of the valuation?—I do not think I am.

30483. He does pay on one valuation and a third?—In the schedules that I see it appears that the income tax is levied on one-third of the valuation of the land.

Sir Francis Mowatt.—One and a third—that is four-thirds.

30484. Most Rev. Dr. O'Donnell.—You are speaking of the occupier?—I am not speaking of the landlord, of course.

30485. Chairman.—When the landlord and the tenant are different people, then the landlord in that case pays once on the valuation?—Yes.

30486. And the tenant pays a third?—Yes.

30487. Where the landlord and tenant are the same person, then in that case he pays one and a third?—Yes. Well, even assuming that, your lordship, my point still remains, that where the landlord who, as we know, is generally an absentee, pays his income tax, and there is an occupier of grass land who has it for eleven months or on a letting of, perhaps, five years, I assume that man pays the assessed rate to the County Council, and he gets approximately 1*s.* 6*d.* to 1*s.* 8*d.* of the rate paid for him by the Government; and do you want me to believe that it is, as it were, a certain set-off against that, the circumstance that that man pays income tax to the Government on one-third of the land, that is to say, approximately 4*d.* in the pound on the valuation after he has got 1*s.* 6*d.* out of the general taxation.*

30488. Sir John Colomb.—To make quite clear what you mean, is it not the case that you are alluding to the grant from the State in aid of local taxation?—Yes.

30489. But does not everybody, according to his valuation, share equally in that?—Yes.

30490. And how do you make out that the man who occupies grazing land gets any advantage over the man who pays on the same valuation who has a tillage farm?—He gets 1*s.* 6*d.* or 1*s.* 8*d.* of the poor rate paid for him by the Government. Is not that the fact?

30491. Pardon me—because this is very important—the local taxation is based entirely on the valuation?—I know.

30492. And the valuation was made some fifty years ago on a certain basis?—Yes.

30493. And then there is so much money to be raised, so much in the pound is levied on the valuation?—Yes.

30494. And each according to his valuation has to pay this local rate. Is not that so?—Yes.

30495. But the State funds come in aid or relief of the taxation of the whole body?—Yes.

30496. And the advantage gained by that is spread over all the occupiers or taxpayers on the basis of their valuation?—It is, of course.

30497. Yet you mean to convey that somehow or other a grazing farm gets more advantage out of that than a tillage farm of the same value?—I do not mean that it gets comparatively more advantage than the tillage farm. But I do say that they are the people least in need of relief from local rates, and they are the people that I consider least entitled to it also.

30948. And, therefore, at present they are all equal, but what you mean is that as to policy in the future they should not be all equal?—Yes. They are all relieved equally on the basis of valuation, but when you take the same basis in relation to Imperial taxes you find that the congested areas contribute out of all just proportion, as compared with the waste ranches, under the present indirect method of levying.

30499. You stated also, if I do not mistake, that the money is handed over by the Government to the County Council. That is a lump sum taken from the general taxation of the country collected from Ireland?—I see by the returns of the Government officials themselves that that sum is calculated approximately in the following way. There is a duty of 11*s.* levied on every gallon of whiskey in this country. Sixpence of that is set aside by the Treasury to go in relief of local rates. And on every barrel of porter consumed there is an excise duty of 7*s.* 9*d.*, of which 3*d.* goes in aid of local taxation, and that these duties are handed over to public bodies to go in relief of local rates; and as I understand the Treasury returns and their explanation, it is made up in that way.

30500. Most Rev. Dr. O'Donnell.—Is this your point, that the small occupier who consumes tea and other dutiable articles contributes largely to the taxation?—Yes.

30501. Some of the money that is raised by duties on tea, spirits, and tobacco is handed back in aid of local taxation?—Yes, my lord; but it is chiefly money that is raised on whiskey and beer and porter.

30502. Very well. Now let us take 100 acres under grass and the same 100 acres in the hands of four small occupiers?—Yes, my lord

30503. If 100 acres are in the hands of four small occupiers the families of those four small occupiers will be consuming tea, tobacco, and some spirits?—Quite right.

30504. And, in other words, those 100 acres when occupied will be contributing largely to the source from which local taxation is aided?—Yes; that is quite right, my lord.

30505. Then, it is your contention that if the 100 acres are in the hands of small occupiers those occupiers would have a claim for having their local taxation eased, which cannot exist when the 100 acres are in the hands of any man who does not contribute equally to that source?—I mean, with nobody there except a herd.

30506. In this way the 100 acres in the hands of occupiers yield far more to the public revenue than 100 acres under grass?—Yes, that is so.

30507. While the local rate on the 100 acres in the hands of one man may be the same as if they were occupied by four small holders?—Yes.

30508. But you say that there is not at all the same claim for aid to the local rate which is paid by the 100-acre farm under grass as there is where the land is in the hands of the occupiers?—That is right, my lord.

30509. Because in the one case the occupier contributes to the source from which the taxation is aided, and in the other the holder of the grass land does not, or does not at all to the same extent?—Yes, my lord; and further, if you divide that 100 acres into a greater number of holdings than four your argument is considerably strengthened in proportion.

30510. And the greater the number of families who consume those dutiable articles the more they contribute to the source from which the relief of taxation comes?—Quite right, my lord.

30511. Sir Francis Mowatt.—The sum that you calculate in the manner you suggest does come from the general body of taxation?—I do not believe it does, and I would like to be convinced of the fact.

30512. I am not going to convince you?—Well, of course, I am open to argument. There would be no use in my being here otherwise. The Board is at present operating on the D'Arcy estate in Doocastle, County Mayo, within three miles of Tubbercurry, on the Phibbs estate at Moylough, County Sligo, two miles from Tubbercurry; on the Armstrong estate at Achonry, three miles from Tubbercurry. They purchased the Fitzgerald estate at Tullycusheen five years ago, and distributed the untenanted portion of the estate among the tenants, made roads, fences, etc., and improved the estate in many ways. The estate was not a large one, and was in some respects awkwardly situated, but the Board made the most of the means at their disposal. It is now sold to the tenants, who are, generally speaking, well satisfied with their position, and there is very little grumbling. With regard to the alleged difficulty in inducing the inhabitants in congested areas to migrate to other lands, it does not exist to any appreciable extent in those places where I have seen the Board operating, and if it does exist anywhere, it should be borne in mind,

* *Note by witness.*—Explanation of answer to No. 30487:—Income tax on one valuation (approximately) is paid in respect of the congested area by the landlord, who is generally an absentee, so that the only difference that can be put down to the credit of the waste ranches is the extra Income tax on the one-third valuation, which amounts to 4*d.* in the pound as against 1*s.* 8*d.* received back through the grant in aid. And even this difference would probably disappear, if closely examined into, because the rent which the landlord draws from the congested area is, in very many cases, more than one and one-third times the valuation which would be placed on that area if it were, like the grazing ranches, "consolidated," *i.e.* cleared of its farmhouses, &c., and laid waste.—P.D.

that having regard to the persecution and ill-treatment of those people for generations past, which accounts for congestion, poverty, and numerous other ills, they ought to be excused if they do not display the same spirit of enterprise and the same readiness to adapt themselves to new and changing conditions that may be found in the inhabitants of free and well governed countries. Some of the tenants on the D'Arcy estate at Doocastle, who had very small and poor holdings, and who were offered far better and larger ones by the Board elsewhere, were not willing to remove, and the reason they gave me when I was endeavouring to point out their apparent lack of energy and pluck, was "that their means were entirely too small at present to undertake to work new farms and pay the rent of them, and that if they encountered one or two bad years after removing they would find themselves and their children on the roadside."—that is, evicted. That is the ordinary way of putting it. A small number of tenants on the same estate, while quite anxious to get an additional piece of land with their present holding and to pay a fancy price for it (in instalments), are loth to abandon their old holdings because they like to keep a grip of the homestead. That is the advice that Parnell gave them.

30512A. CHAIRMAN.—Why do you say that you disagree with those witnesses who told us that there is a difficulty in getting people to move?—I will explain that. There may be difficulty in some cases. The Board has met this by giving special inducements to about three of the larger and more comfortable tenants to migrate, and afterwards dividing the holdings thus acquired in small lots among the adjoining tenants. This, although sometimes unavoidable and done with the best intentions, has serious drawbacks, inasmuch that while the small holdings are enlarged and improved they are still uneconomic, and their owners will remain poor always—it is merely devolution—cobbling with a great question. The most desirable class of tenant—those who are in the prime of life—will, with very rare exceptions, be found willing to migrate when reasonable inducements are offered. The advice and guidance of the parish committees where they exist under the Board will always be found most useful to the Board and its officials in facilitating migration. With regard to bettering the conditions of the people in congested areas, the Parish Committees are the most competent bodies for dealing with this matter. A great amount of good has been done in Tubbercurry parish and also in Curry by means of grants administered through the Parish Committees considering the smallness of the sums at their disposal. The people exert themselves greatly in order to take advantage of those grants in improving and repairing their wretched dwellings and outhouses. They even borrow money from their well-to-do neighbours and local shopkeepers to purchase timber, iron, etc., to complete the work specified by the local inspector for the purpose of securing the grant. Those grants ought to be continued for several years and ought to be increased considerably. Besides improving their dwellings and immediate surroundings the committees should, in the case of Tubbercurry and Curry, be provided with and empowered to administer grants on similar lines for the purpose of encouraging fencing, drainage, planting, etc., on small holdings, most of which are very poor in quality. A good deal in the matter of devising local schemes ought to be left to the discretion of the Parish Committees, and it would be very unwise to endeavour, as has been suggested in some quarters, to carry out the work of those committees by means of a Government Board. The people do not care about Government Boards. Those Boards do not and never can acquire the same intimate knowledge of the wants of the people possessed by the local committees, and, besides, those committees discharge a good deal of administrative work voluntarily, which would not be the case with the Government Board. Such services as are paid for are paid at a small rate of wages. The actual cost of administering £100 is not more than £10 or £12, and under a Government Board, as we know it, the same work could not be done at anything approaching this sum.

30513. Mr. O'KELLY.—Anything approaching it, you mean exceeding it?—I mean that the figures would probably be reversed.

30514. Doubled?—No, but reversed. Under the present system the actual cost of administering £100 is not more than £10. I believe £10 is the general amount.

30515. Mr. SUTHERLAND.—Ten per cent.?—Yes.

30516. Would you call that low?—Yes; I call that low, according to what we are accustomed to in this country. If it was handed over to a Government Board the belief generally exists, and the belief is well founded, that the cost of administering £100 would be £70 or £80 probably.

30517. Sir JOHN COLOMB.—Do you mean that with £100 to spend the officials would eat up £80 themselves and have only £20 for distribution?—Yes. I have read the evidence that was given at the Commission of Inquiry into the working of the Department of Agriculture, and I do not see what other conclusion any Irishman could come to.

30518. Most Rev. Dr. O'DONNELL.—You say that ten per cent. is low for administering £100. See how that works out. That would be £10 expenditure out of £100?—Yes.

30519. But that is not the way to take it, I submit to you. How much would the work be value for that would be done with that £100?—Taking £10 out of the £100?

30520. No. Take the £100. How much is the value of the work done for £100?—£270, I take it.

30521. That is to say three times the amount of the grant?—Three times the amount of the grant

30522. Then if you take the expense of administration as £10, it has to be compared with £300 and not with the £100?—Probably that is the better way of taking it, but the cost of administering £100 is what I was dealing with.

30523. And the administration is really of £300, not £100?—Within a radius of four miles of Tubbercurry there is on nearly all sides a very plentiful supply of bog, together with an abundance of cheap labour. The district is pretty well provided with roads, and, with the co-operation of the railway company, there is room for the development of a peat industry, which, under proper business management, would prove highly remunerative and give considerable employment. Any scheme for bettering the condition of the people, their dwellings and holdings ought to be accompanied by the establishment of this or some other reproductive industry, adapted to the district, and they should both go hand in hand to insure the best results. I was asked by some of the people to state to your lordship in connection with the establishment of some local industry to give employment that the nuns of the Marist Convent here would be very glad to consider any scheme or suggestion or assistance that would be given with a view to providing employment for girls in this part of the country, that is to establish some small industry in the way of hosiery or shirt-making or something of that description if they could get any assistance from any of these boards.

30524. Mr. O'KELLY.—Is there anything of that kind done now?—No, but the place is new. It is only put up within the last few years, and there has not been any time to make any start in that direction. The foundation-stone of the building was only laid in the end of 1904, and it is only just finished.

30525. I understand there is a successful industry in the lace-making way?—Yes, in Banada, four miles from here.

30526. CHAIRMAN.—You spoke about the peat industry?—Yes, the general peat industry.

30527. What is the general peat industry?—Such as they have on the Continent. But here in Ireland, of course, we have no practical experience, and people that communicated with the Department of Agriculture cannot get any instruction on the subject.

30528. The industrial system you have in your mind involves the selling of the peat?—Yes, and taking the by-products out of it.

30529. Do you think it would be a good thing to do?—I believe it would. Why should it not, my lord? We are importing fire stuff from England although we have abundance of bog on every side.

30530. Do you think it would be a good thing to allow the bog on which the people depend for their fuel to be used for commercial purposes?—There is such an abundant supply, my lord, that there is no danger whatever of its running out.

30531. Mr. SUTHERLAND.—That does not agree with evidence that we have had in other parts of the country?—In this part of the country the landlords are sticking to the bog and won't even allow their tenants to cut it.

Apr. 20, 1907.

Mr. Patrick Dyar

30532. CHAIRMAN.—But supposing there was a peat industry to be carried on, do you think it would be better to allow the peat to be sold rather than divided up amongst the new holdings?—Well, I would first give a reasonable supply to the tenants, and after that any bog that would be left I would use for the purpose of creating a local industry.

30533. Sir JOHN COLOMB.—What do you mean by a reasonable supply—how many generations' supply would you allow? Of course I do not suppose it will go on for ever, but for years and years and for generations. Therefore for how many generations would you provide, because you must think of the people that are to come after you?—Yes, that is right.

30534. How many generations?—Well, I would leave that an open question. You know there are parts of the country where they have a supply of bog which at the present rate of progress would not be exhausted probably in three hundred years.

30535. But I am talking about the Congested Districts Board taking the bog and dividing it. You say they ought to allow a reasonable amount, and then let the industry work away?—Certainly.

30536. Then in that case for how long a time should there be a supply reserved?—Well, such a supply as would maintain the present rate of consumption for 100 years. Would not that be reasonable?

30537. Well, I was merely asking you what you thought. You say 100 years?—Yes.

30538. And then after 100 years the people might be without fuel?—I do not think that is a right conclusion to draw.

30539. Most Rev. Dr. O'DONNELL.—You think there would be some new contrivances?—I think there would be an abundance of new contrivances.

30540. Sir JOHN COLOMB.—When you see fuel brought from England or Scotland into this country, is it not because the people find coal from England and Scotland really cheaper and more economical than turf? Why else do they do it? Why does it come in?—There are a variety of reasons that combine to make it come in. The first of them is that we have coal in this country, within twenty-five miles of the town here; still, owing to the bad transit system, it comes cheaper to us to get it from Newcastle, in England.

30541. Why do they not use turf instead of coal?—With regard to turf, one cause is that the landlords won't allow them to get a supply of turf to sell to the people of the town. Another great difficulty is the uncertainty of the seasons, which affects the price of turf, and a third reason is the difficulty of obtaining labour in a great many places to save the turf.

30542. Is there a difficulty in obtaining labour to save the turf?—At the time that the turf is being saved the men who would otherwise be doing that here have to go away to England to the harvest.

30543. That means that at the time for saving the turf the people cannot get wages enough for cutting and saving the turf, and therefore they go to England to get better wages?—They go to England to get better wages in a great many cases. That is right. And the reason of that is this, that it would not pay, that you could not sell the turf at a price unless the landlord was willing. But turf and peat are different commodities.

30544. I am talking about fuel?—I am talking about peat. I endeavoured to get a full supply of information on this question, but you cannot get anything except what you read in the papers. Because I know of a gentleman who wrote to the Department of Agriculture, where they said they had an expert in the Department of Agriculture ——

30545. But am I right in understanding you to say that at the time of the saving of the turf there is no surplus supply of labour?—I will explain that to you. The men cut the turf and spread it out, and then go off to England to the harvest, and the women and children of the family generally save the turf, provided the weather is fine. There is no surplus supply of labour. The men do part of the work and the women and children do the rest of it.

30546. CHAIRMAN.—They can do the light work?—They can do the light work and fashion the clamp. And comparing the cost with regard to coal, I see that in Canada ——

30547. Sir JOHN COLOMB.—I was talking of Tubbercurry?—But there is no peat industry in Tubbercurry. But I will give you an instance of the comparative cost of peat and coal. I see Mr. Alexander Dobson, of Ontario, who has appliances of his own for the manufacture of peat, sent peat sixty miles by rail into the City of Toronto, and sold it at 17*s.* a ton in the market, and coal is sold there at 28*s.* a ton, although the city is in a position to obtain a coal supply.

30548. Mr. KAVANAGH.—When you talk of peat and turf, what is the difference in your mind?—Peat is practically what may be called manufactured turf. Turf, as we know it, is a purely natural product, with practically no artificial treatment at all, except merely cutting it and letting the sun dry it.

30549. Peat is for export?—And for home consumption as well; and it would be better for the people and far cheaper if they had a peat industry. They would get their fuel considerably cheaper than they do.

30550. Mr. O'KELLY.—What is the artificial treatment?—There was a peat industry at a place called Coolaney, along the railway line, which existed some years ago; but it failed, owing, I understand, to financial embarrassment and want of proper business management; and I saw the stuff burnt, and certainly, as I valued it at the time I computed the cost of it for general use, it was far cheaper than turf.

30551. Is peat compressed, hardened turf?—Yes.

30552. Is there any mixture?—No, but in a great many cases they take other products that are more valuable. I saw some time ago the result of one experiment with peat and the other products, and there was £4 worth in all of material taken from a ton of the common bog or raw stuff, the cost of production being only 30*s.*

30553. Mr. SUTHERLAND.—Do you know a place where a peat factory has succeeded?—Not in this country.

30554. Do you know that it has been tried in a great number of places?—I see by the papers that they are making it a great success in Germany.

30555. In Germany it is used for the production of gas?—For a variety of purposes. As a matter of fact, I believe they are turning out both gas for illuminating purposes and what is called "producer gas" from the peat.

30556. Sir JOHN COLOMB.—Do you know any place where it has been successfully applied to the production of gas?—Well, I have not any experience of that myself, but I know a gentleman whom I see contributing a series of articles to the papers, and he appears to take an interest in statistics on the subject, which are furnished chiefly by some German Government Department, and he wrote to the Department of Agriculture some time ago—I can give you the gentleman's name, Colonel Warburton, and he appears to be keenly interested in trying to get a Government Board to take up this thing in Ireland, being himself an Irishman.

30557. Did the Department of Agriculture do anything?—I am coming to that, sir. Colonel Warburton wrote to them to make some inquiries of their peat expert, and the reply that he got was that the peat expert had seen something about it in the Dublin papers, but beyond that that he knew nothing more about the subject. There are portions of Tubbercurry and Curry parishes in need of a good system of drainage, and there are various small portions of waste moor which the Board, with advantage, could have drained and planted. Both farmers and labourers would benefit directly and indirectly from this. The Board could afterwards if it so desired hand over these plantings to the County or District Councils on reasonable terms, and they would after a very few years become a source of profit to the ratepayers. At Doocastle the Board is cutting down the timber on the estate, but it is not re-planting. This is a great loss, because the district is very bleak and exposed. With the exception of the four or five townlands in each parish the tenants of Tubbercurry, Curry, and Kilmacteigue parishes are largely dependent on the earnings of themselves and their children in England and America for the landlord's rent, the clothing of their families, and, to some extent, their food. During the month of December in each year I cash American cheques and money orders amounting to between £700 and £800, and I believe that it is only a small fraction of the amount sent into the district comprised in the above parishes.

30558. Most Rev. Dr. O'DONNELL.—Within what months did you cash them?—In the month of December in each year. Of course I get them all the year, but the great bulk of them come at that particular time.

30559. In one month you cash between seven and eight hundred pounds worth?—Yes, and that is only a small fraction. In all the parishes of the West they are received and cashed. It is difficult to conjecture what would happen if the English and American earnings were stopped, but it is quite safe to say that the landlord's rent would be sadly in arrear. Under no circumstances ought the sale of estates within the parishes referred to as congested, direct from the landlord to the tenants, to be sanctioned without inspection. Four or five estates within the area were offered for sale to the tenants in 1904-5 at from twenty-three to twenty-six years' purchase of second-term rents. The only tenants who showed any willingness to buy were the poor, who owed arrears of rent, and who would not be able to carry out their bargains or contracts hereafter, if the sales took place on the terms offered, and a few (not many) comparatively large landholders and small graziers who were in comfortable circumstances. Practically all the tenants who were clear in the rent office and who had their children in America to rely on refused to buy at the terms offered. The landlord in stating his terms invariably quoted, not as hitherto the number of years purchase he required, but the reduction in present rents which the acceptance of his offer meant. In any negotiations which took place prior to 1900 the price usually demanded by the landlord was, in this district, seventeen or eighteen years' purchase. In these districts near Tubbercurry where the Board has been operating there is a marked improvement in the spirit of the people. They have become more sober, thrifty, and industrious. There is a desire to be independent of everybody, which hitherto did not exist. I know men who since they got under the Board have settled and paid old shop bills which were out of date and irrecoverable. One man who formerly had three acres of land voluntarily settled a bill of £27 which was long out of date, and which I regarded as almost bad. The potato crop has failed on the four-fifths of the tenants. The hay crop has been an exceptionally fine one in quality and quantity, but there is no market available for the extra supply, which is a great loss to many people.

30560. Sir John Colomb.—You are speaking of hay?—Yes. In France, on the other hand, according to the newspaper accounts, the hay crop has been a bad one this season, and prices are high—£4 to £4 10*s.* per ton. I should say that since this was written—last October—the price has considerably increased. The import duty is only 4*s.* per ton, but the French market is lost to our people owing to the bad transit system and to the circumstances of Ireland having lost her direct foreign trade. If proper trade and transit conditions existed here, the County Sligo farmer could easily dispose of his surplus hay at Sligo and Ballina at from £2 10*s.* to £3 per ton

30561. Chairman.—In the first page of your memorandum you say the change needed in law is authority for the Board to acquire compulsorily, but on a reasonable basis of compensation for the present owners, lands which they themselves or their predecessors acquired compulsorily. What do you mean by a reasonable basis of compensation—what would you call reasonable?—Whatever a competent land valuer would consider reasonable. Whatever capital value is considered reasonable as between the owners and the tenants that are to be given the lands hereafter, and I cannot really understand the mystifying antics of a lot of those gentlemen that are grumbling about fair value when you recollect that the State in taking over this land, though buying of course from the owners, do not buy it for themselves, but merely buy it for the purpose of handing it over to the tenants whom they create.

30562. Those are the Estates Commissioners?—Yes, or the Government; and they pay the owner presumably the highest they can afford to pay him consistently with due security to the State; and I do not see what hardship they are likely to inflict on the owner, nor do I understand the great opposition they are giving to the application of the principle of compulsion at all. I have followed most of the evidence that was given by the witnesses who went up in the landlords' interest, and I cannot see that any one of the witnesses gave a solid or substantial reason against the application of the principle of compulsion. The only ones that I could know or understand myself could be put down under two heads, the first of these being that the Government was going to cheat them in some way or other, or going to deal unfairly with them—a thing that I do not think from their past experience they have any reason for supposing, while the only other reason for objecting to compulsion is that there may be a sentimental objection to it in this way, that the Irish landlord, who, during the experience of men now living, wielded unlimited power over an estate and over a portion of the country, cannot see his way now to be told to quit or to clear out—a man who, or his father before him, wielded a power and influence in the country far greater than King Edward or the German Emperor will ever dream of wielding.

30563. Now, you say the shop in which you are employed is that of a general merchant?—Yes, my lord.

30564. And do you supply any of the small farmers in the district with goods?—Yes.

30565. Are they in greater debt now than they used to be or in less debt?—Well, of course I must admit that there are a great many of them considerably in debt.

30566. How do they compare with what they used to be?—Well, my experience covers something about fifteen years in business, and I do not think that they are worse now, and I think, on the other hand, that they are considerably better than they were fifteen years ago.

30567. You do not think that the indebtedness of the countryside is greater than it used to be?—I do not say that it is, but of course it is bad still.

30568. But it is not worse?—No; and if it gets any fair run of luck or favourable seasons it diminishes greatly.

30569. Sir Francis Mowatt.—Their state is not merely not worse, but better?—I consider, on the whole, that their position is better.

30570. Chairman.—During the last fifteen years did you see any difference in the standard of living? Do they buy better goods—do they live better, according to what they buy in the shop?—I do not consider that there is any noticeable change in that, my lord, during my experience. Of course I believe that they live better now than they did fifty or sixty years ago; but during the last fifteen years I do not know that there is any noticeable improvement. I do not notice any more appearance of high living now than fifteen years ago.

30571. I do not mean extravagance, but you have noticed that during the last fifteen years there was a tendency to purchase things in the shop that they did not do formerly?—There is one thing that I notice, that they are all inclined, as far as their means go, to purchase goods of a higher quality; but at the same time I do not know that they spend more money or that they are more extravagant in that way or that they are living higher.

30572. When you talk of goods of a higher quality, do you mean to say that they pay more for tea and sugar and flour and things of that sort than they used?—Well, they do not pay less. There is hardly any change in the quality of these commodities, as far as my experience goes in this part of the country; but in other goods, in clothing and such like, and even in the purchase of manures and seeds and such other things as they require for the up-keep of the farm, there is a tendency to get the best quality in everything they get.

30573. I see. Then in your opinion the change is in the things they want to put upon their land and in clothing?—Yes.

30574. And though they spend more on these things their indebtedness is not increased?—Well, I would not consider that it is increased, but it is still bad enough.

30575. Does not that show rather that their position is better than it was fifteen years ago, that they are making more money?—Yes, but one bad year eclipses all that.

30576. But, taking the average of years, would you say that the small people generally are making more money than they did?—I could not honestly say they are, but I do not say there is no material improvement.

30577. If there is material improvement where does this extra money come from?—It comes from America, and it comes from England, and other places. It is not realised at home.

30578. But they must have more money, must not they, if they spend more on things for their land?—I do not mean to say that they spend more on things for their land or on their clothing. From the circumstance that a man buys a better suit of clothes, for

Apr. 20, 1907

Mr. Patrick Dyar.

instance, that he pays £3 for a suit of clothes, and wears it for five years, it does not follow that he is spending more money on his clothing than if he paid 30*s.* for a suit of clothes every second year.

30579. I see. You think that their expenditure generally is not greater?—No; I do not see that their spending power is increased. And another thing is that they are less inclined to go into debt than they were in those times.

30580. Mr. SUTHERLAND.—I was going to ask you that question, which is the greatest test of all. They are beginning to see more clearly the benefit of thrift?—Yes; they are less inclined to go into debt.

30581. CHAIRMAN.—When a man goes to a shop to buy a thing for which he does not wish to pay ready money, does he show the same curiosity and anxiety with regard to its price as if he was going to pay ready money for it?—Well, two-thirds of them, or more than that, three-fourths of them will.

30582. Will what?—Will pay just as much attention to it as if they were paying ready money for it, and be precise to see that they are getting value and fair play in every respect.

30583. Three-fourths of them?—Or more.

30584. But there is a class of them that are careless?—There is a class that are careless, and that class is careless not exactly because they do not intend to pay or that they are heedless about paying, or, as a matter of fact, that they expect to be heedless about paying, but that, as a rule, they have such confidence in your honesty that they leave the whole affair to yourself.

30585. That is not due to a feeling that as they do not intend to pay ready money they have no claims to bargains?—Well, I think the number of people that would be influenced or have their minds that way would be very small, indeed. The number would not be more than three or four out of a hundred.

30586. Most Rev. Dr. O'DONNELL.—They are not quite so independent as the people generally who have cash?—Well, not quite so independent.

30587. CHAIRMAN.—That man that buys on long credit belongs to a class that is careless; but do you think that when that man does pay cash, he then becomes careful?—Well, in very rare cases. In fact any man that I would see doing that would strike me as being an odd sort of a man.

30588. Sir JOHN COLOMB.—That is, a man who was careless while getting goods on credit, would, on paying ready money, become very tight and very careful?—He would strike me as being a very odd man in this part of the country.

30589. CHAIRMAN.—As a rule when a man does buy on credit he is rather careless?—Oh, no, not by any means; it is now the other way, but I believe it was that way formerly.

30590. You find them more careful?—Yes, more careful and more businesslike in the way of shop business. There is a considerable improvement.

30591. Most Rev. Dr. O'DONNELL—Do you find a general tendency among people to take the world much more seriously than they did some years ago?—Yes, my lord; that is my experience. They are becoming far more hard-headed, if I may use the term, in the ordinary affairs of life.

30592. CHAIRMAN—In a business like yours when a small farmer wishes to reduce his debt, does he always reduce it by cash payments to the shop, or does he ever offer you stock?—Frequently. In the place where I am employed there is no live stock or farm produce bought for export or for trading purposes. The man has very little land, and, of course, the oats, hay, potatoes, etc., required for his house are all bought from his customers, but their amount is small, and the amount of debts that could be paid in that way is very trifling.

30593. Sir JOHN COLOMB.—Butter or eggs?—Well, the butter is taken by the co-operative creamery, and we don't deal in eggs.

30594. CHAIRMAN.—Should you say that in this district it is ever done, that men reduce their debt to the shop by bringing in butter or eggs, or a calf, or something like that?—Well, they do to some extent. In the majority of cases the people send their milk to the creamery now, and take eggs in weekly, and they try as far as possible, and as far as the money goes, to supply the house with necessaries, but of course the cattle and other things are sold to supply the landlord's rent.

30595. In the market?—At the fairs.

30596. Sir JOHN COLOMB.—Is there a spirit licence attached to your place of business?—Yes, sir.

30597. Have you noticed a diminution in the profits you have made on drink in the fifteen years that you have been employed there. As an illustration of these things, have you found that the profits from that branch of the business, beer and spirits, has been diminished?—Well, I do not consider that there is any diminution in the profits, or that the consumption has very much diminished during that time; but drunkenness at the markets and fairs, such as we were accustomed to see in former years, has to a great extent disappeared.

30598. Mr. O'KELLY.—These are secrets of business?—I am at liberty to tell the truth, to give the information.

30599. Sir JOHN COLOMB.—Have you many of the farming class who are ready money purchase customers—who are ready money people—and in asking you this question I do not press you for any answer, I leave it to you to answer as you think right?—I can. There are between 1,400 and 1,500 families trading with the place in which I am engaged as manager and something like 900 of these are what we look upon as regular customers, that is customers who do the bulk of their trade with us, and I consider that something over 600 of these—slightly more—are what you call ready money customers, or quite as good.

30600. Ready money?—Well, that class of customer that pays his account at the end of the half-year or at the end of the year, I look upon as ready money customers in the ordinary way of things here.

30601. I want to ask you, to clear up my mind about it, when you spoke about waste land you were asked by Lord Dudley to describe what you meant by waste land, and what I took down was that you meant land not used for dairying purposes but for fattening purposes?—Lands that were not tenanted in the ordinary sense as we know it. I would not consider a grazing farm as tenanted land that was used for the purpose of fattening bullocks, even though the man that was immediately in possession of it was a tenant within the meaning of the law, unless that he lived on it and worked it.

30602. I misunderstood you. You stated that at Doocastle the Congested Districts Board was cutting down timber, or that timber was being cut down, and that no new planting was being done in its place?—That is quite right.

30603. Do you mean the trees in the hedgerows or banks, or do you mean plantations?—Well, they were small plantations.

30604. Are those being cut?—They have ceased to cut them for some time past, but they cut down a considerable amount of them, and I would not like to see them cut down at all, especially as they were not being replanted.

30605. Was it that they were thinning out the plantations—or that they cut down the plantations absolutely?—In some parts they cut them down absolutely, and the land they acquired by that process they gave to some of the adjoining tenants as an increase of their holdings—the land that they cleared of the trees. I know one tenant in particular who got a slice of the land just after being denuded of the trees, as an increase to his holding.

30606. Were those plantations with regard to the holdings to windward—I suppose your worst winds are west and north-west—were those plantations shelter plantations to those holdings?—This is only one plantation I am referring to really.

30607. Can you give the Commission any idea of the size—on acre or two acres, or was it merely a little patch?—The total amount of land under trees would not be more than ten or twelve acres, and it was a shelter plantation more than anything else.

30608. It had been planted for shelter?—Yes, for the district. It was formerly the residence of Mr. Joe More McDonnell, and along the fringes of his grass land.

30609. Had that plantation stood would it have been a shelter from the prevailing gales to some of those new tenants?—It would have sheltered some of the farms, but it was not of itself of sufficient extent to shelter any considerable tract.

30610. Mr. O'KELLY.—Do you know what the object of the Congested Districts Board was in cutting down the plantation?—I do not really know, but I

know that they distributed a certain amount of the timber, but I would say a very small amount of it would be needed to repair the houses. The trees may have been cut down to distribute some of the timber amongst the small tenants to repair their dwellings, but the amount required for that purpose was not very large.

30611. What was done with the balance of the timber?—I really do not know, but I heard some of it was sold.

30612. Sir JOHN COLOMB.—You say the Congested Districts Board did it, but have you any reason to suppose that it was done under the authority of the Congested Districts Board. Perhaps the tenants cut it for fuel?—The Board's officials were there at the time, and I took it to be the act of the Board.

30614. Do some of the shopkeepers hold agricultural land?—Yes.

30615. Do they reside on them?—No.

30616. They are holding non-residential land?—Yes.

30617. Now, is the shopkeeper's land used for agricultural purposes?—Yes.

30618. Would you take it away from the shopkeeper?—Now, I will answer that, if you please, and I intend to ask the Chairman's permission to make a remark on that point. A somewhat similar question was asked of Mr. M'Loughlin yesterday in the evidence, and I was here in the court at the time when he was asked the question. He was asked, I think, a question similar to the one you are now putting to me, did he consider it fair to take from a shopkeeper land that he was after buying with the money that he made in trade, did he consider it fair to apply the principle of compulsion or to take the land from him for the purposes of the Board. Now you know that unfortunately in this country when a shopkeeper makes money in business he has nowhere else in the country to invest his money except he lodged it in the Post Office Savings Bank or in a joint stock bank, or if he cared to buy Dunlop shares for it, or something of that sort. And consequently finding an opportunity of getting grazing land he, as a prudent man and from his own point of view, invests his money in it in the hope of turning an honest penny, and I think it is a very fair thing to do, but the only remedy for that is this, but when you touch the question we go up right against the great eternal question of Irish freedom—when you touch that, I think, no matter what Government is in charge of this country, you must give facilities to men of that class to have other outlets for the investment of capital besides investing it in land intended to be distributed amongst small farmers. And, of course, if we had industries in this country the same as they have in every well-governed country a man would have plenty of opportunities for investing his money which might bring in a reasonable rate of remuneration from the investment without sticking it in land. In the present case, and with the connection that at present exists between England and Ireland, without an organisation of Irish industries, the shopkeeper who has his money made has nowhere else to invest it unless he sticks it in the Post Office or joint stock banks.

30619. Most Rev. Dr. O'DONNELL.—That is not the question Sir John put to you. It was not exactly a question of the propriety of the investment. He asked you whether in the case of such an investment you would expropriate the shopkeeper?—I would expropriate the shopkeeper, but I would leave an Irish Government to do it. That would be my answer, and I hope that will be satisfactory.

30620. Sir JOHN COLOMB.—If you are going to deal with owners or with farmers in this way, would you make an exception of the shopkeeper?—I do not think I would, but still the point that I have made remains, that the shopkeeper who has made money in business in the unfortunate circumstances in which we are placed in this country has no other investment for his capital.

30621. We had very strong evidence from a gentleman who came forward as a nominee on the same question that I put to you, and he was for absolutely making no exception at all. He said he considered the shopkeepers a dangerous class. You do not agree with that?—I do partly agree with it. I consider the shopkeeper is, like the grazier, hurrying the country on to destruction—that is, the class of shopkeeper that buys up land and leaves it waste or under grass.

30622. He was not talking of any particular shopkeeper, but was asked the same question exactly which I put to you about a shopkeeper putting his money in a grazing farm. He considered that that man was a dangerous man to the country. Do you agree with that?—I certainly believe that a shopkeeper in doing that is hurrying the country on to destruction, but the unfortunate circumstances in which he is placed are certainly not of his own creation, and though I would be for expropriating him and packing him out bag and baggage, I would like to see an Irish Government in charge of the job. That would make all the difference in the world.

30623. Most Rev. Dr. O'DONNELL.—It would make it more sweet?—Oh, yes, and he would have an investment of his money in the country just as well.

30624. Sir JOHN COLOMB.—How would it affect the shopkeeper on a question of public policy?—If you had an Irish Government in this country, and that there was sufficient public confidence for the security permanently of investments in industrial enterprises and you had a financial system in this country, a banking system and a Stock Exchange, not as at present under the threat of the British Government and the Lord Lieutenant of the day, there would be plenty of opportunities, and shopkeepers and others who had made money would be ready and willing to invest it in enterprises which showed a reasonable chance of success—a thing that cannot be done at the present day.

30625. Thank you. I am sorry to have kept you so long. Now take your peat industry that you advocate?—Yes.

30626. You believe that would pay?—Yes.

30627. What is to prevent the shopkeeper from investing his capital in that—what is to prevent an Irish capitalist, a shopkeeper, or anybody else in Ireland starting an industry that would pay?—A shopkeeper taking that to run it on sound lines would require a considerable amount of both organised labour and capital. It is in modern times a very rare thing to find one man with capital to do that. Consequently they require to float a limited liability company. If that company is established the chances are twenty to one that unless they are backed by powerful political influences in this country they won't get a quotation on the Stock Exchange, with the result that they cannot dispose of their shares in the concern if they require their money for any other purpose.

30628. Do you mean to tell me that all opportunities for private enterprise are not available in Ireland to two or three people or to half a dozen or a thousand people to put capital into a fuel industry?—There are a great many things against them. The banking system is against them, and the Stock Exchange is against them, unless they are backed by powerful political influences.

30629. But is not the banking system in Ireland the same as in England?—I do not believe it is.

30630. Do you think the Stock Exchange is—for the Stock Exchange is not under the control of the Government in England?—I do not believe it is, except in Ireland. Does not the Lord Lieutenant of the day nominate the members of the Stock Exchange? Is not that the fact, my lord?

30631. CHAIRMAN.—I was not aware of it?—He appoints the members of the Stock Exchange.

30632. Sir JOHN COLOMB.—But gentlemen in Tubbercurry could start a Stock Exchange of their own?—The Lord Lieutenant of the day appoints the members of the Stock Exchange. If you do not know it, my lord, I am somewhat surprised, but you may take it from me in strict confidence. And in addition to that the Lord Lieutenant is supposed to satisfy himself of the loyalty of the applicant.

30633. CHAIRMAN.—Did you ever know a case in which the licence had been refused?—The Lord Lieutenant nominates the members of the Stock Exchange.

30634. Have you ever known a case in which the licence was refused?—Well, I do not know. I did not see anything published about it.

30635. If there is no case in which a licence is refused does it amount to an appointment at all?—But is not it the fact that the Lord Lieutenant of the day has the appointment of the members of the Stock Exchange, and hence this part of the country's business is absolutely in the hands of the British Government.

30636. Well, there is a licence, but I do not think it has ever been refused?—Well, no matter.

Apr. 20, 1907.

Mr. Patrick Dyar.

30637. Mr. O'Kelly.—You know the question of solving the problem of congestion is most urgent?—Yes.

30638. And it is no matter who solves it so long as it is solved?—Yes.

30639. Have you any period in your mind in which we are likely to have self-government in this country?—I would like to give an answer to that question. That would greatly depend on ourselves.

30640. Quite so; but in any case do you think it will be a year or two years or three or five, and would you delay the solution of the question of congestion till the time of having a Home Rule Parliament in Dublin?—Oh, no; there are certain powers with regard to the expropriation of shopkeepers.

30641. If you leave out the non-residential holdings, would you have land enough in the country on the eleven months' system to get a fifth of the problem of congestion solved; and still you propose to allow the non-residential people to go on holding the land till such time as a great change is effected?—That is not exactly my contention, for I would go for expropriating them right off, but I would much rather for the sake of security and causing a less amount of hardship, to see the job entrusted to an Irish Government.

30642. Most Rev. Dr. O'Donnell.—I am interested in what you say, that you would prefer expropriation under an Irish Government, but you do not propose to delay necessarily till then the expropriation?—No.

30643. You say that under an Irish Government there would be investments open to an enterprising shopkeeper that are not now open?—Yes, I am perfectly satisfied of it.

30644. I suppose that if there were industries throughout the country such investments would be at once available?—Oh, certainly.

30645. Are you one of those who believe that the beginning of industrial progress in Ireland is Irish self-government?—Yes.

30646. You believe that the real foundation of Irish industry is Irish self-government?—Yes.

30647. And for one who holds that, it is very natural to say that there will be avenues for employment of capital under an Irish Government which do not exist now?—Yes, my lord.

30648. You mentioned something about a plantation which was cut down by the Congested Districts Board?—Yes.

30649. I am anxious to know how far vandalism can be imputed to that Board. Do you know the extent of the cutting?—I do not think it was the mere quantity of acres. I know that a whole lot of people grumbled at it, and that they objected to it merely for the sake of not liking a beauty-spot to be destroyed.

30650. Would you be surprised to hear that those trees were cut down as surrounding a house that was to be occupied, and to which the trees were injurious?—Well, some of them might be cut down on that excuse, but certainly they were not all cut down for that.

30651. Do not call it an excuse. Would you be surprised to hear of the trees being cut off demesne land where they obstructed the striping of the land for agricultural tenants?—I could not very well give you a clear answer to that question altogether.

30652. I suppose you might safely say that if a tillage man is being planted down on certain land, and trees are in his way, they have got to be removed?—Oh, yes, but I would hope that other land could be provided for him besides that occupied by the trees.

30653. Do you know the locality?—I know the locality fairly well.

30654. Are you quite sure that the agricultural resettlement could be carried out without that amount of tree-demolition that has occurred?—Well, of course the particular ground on which the trees were situated came in more conveniently for the particular tenant they gave it to, that is, provided it was not practicable to keep up the trees.

30655. You can understand that being done by an agricultural body for an agricultural purpose?—Yes.

30656. Now, do you not think that one in your position is likely to have a keener vision for beauty-spots than an inspector of land charged by the Congested Districts Board to try and provide farms for the relief of congestion?—Well, I would not like to give either a positive or a negative answer to that, my lord. I would like to leave it an open question.

Mr. Luke Armstrong examined.

Mr. Luke Armstrong.

30657. Chairman.—What do you want to tell the Commission?—My lord, I am one of those shopkeepers that acquired land and purchased it.

30658. Where is your land?—Well, the principal holding I have is in Moylough.

30659. What is your principal occupation?—I am a shopkeeper—that is my principal occupation—and also an auctioneer.

30660. In Tubbercurry?—Yes; and I do a bit of farming.

30661. Where is your land?—The principal farm is in Moylough on an estate purchased by the Congested Districts Board.

30662. What estate is that?—The Phibbs estate. It is in the electoral division of Achonry East.

30663. Yes?—I bought it ten years ago—between nine and ten years ago—from a farmer who lived there.

30664. Mr. Sutherland.—Was that before it was acquired by the Congested Districts Board?—Oh, yes.

30655. Chairman.—Nine or ten years ago you bought it?—Yes.

30666. What is the size of it?—Its valuation is £49 10*s.*, and the first term judicial rent £42.

30667. How many acres?—Between 130 and 140 clear, but there are forty or fifty acres of bog and waste.

30668. One hundred and thirty-five acres altogether?—Yes.

30669. Sir John Colomb.—It was the tenant's interest you bought?—The tenant's interest.

30670. Chairman.—You bought the tenant's interest?—Yes. Latterly I am attacked week after week for not surrendering it to the Congested Districts Board, and I want to explain here.

30671. I think you said they bought the estate?—Yes, they got the landlord's interest.

30672. And you are a tenant of theirs?—I am a tenant of theirs now.

30673. How do you mean you are attacked for not surrendering it?—My lord, the branch of the League has been passing resolutions week after week calling on me to surrender it.

30674. To surrender to whom?—I cannot say, because I have been made no offer by anybody. But I may say for your information that about a year ago, at the time it was bought, there was sent round a notice by or from the Congested Districts Board stating that they had a number of holdings, and this is all over the town, some up at Claremorris, some at Galway. However, I wrote to them at the time offering to exchange with them, and I got a big, long query sheet down to fill up, between thirty and forty questions, and as to how I acquired it, and who had it before me, and was it embarrassed, and so on; but I answered it all, and sent it back, and they sent me a formal acknowledgment, and from that day to this I have never heard a word from them. It was referred to in the late resolutions passed by the Moylough Branch last Sunday calling on the people not to have anything to do with us till we surrendered it, and also Mr. Cooke, who has a big farm beside us.

30675. Is it a big farm, Mr. Cooke's?—It is not as large as mine, but there is more upland on it than on mine.

30676. Is it on the Phibbs estate?—Yes.

30677. What I understand is that they wished you to surrender your tenancy. To whom?—I cannot say to whom. I have been offered nothing for it, and I am not expected to surrender without fixing a price for me.

30678. They wish you to surrender your tenancy?—That is the resolution.

30679. I suppose you are one of those people whom we have heard about, who it is suggested might perhaps be migrated to other places. Would you be prepared to surrender your tenancy and move to some

other place that the Congested Districts Board, say, was able to offer you?—Well, I could hardly be prepared to move because I am planted in Tubbercurry. If I had got a better farm within any reasonable distance of a non-congested area, I would not have had the least objection, or even if I knew that I was going to get a decent price for it. But the notion of passing resolutions calling on me to surrender or boycott me because I won't surrender it is nonsensical unless you make some offer for it.

30680. Mr. SUTHERLAND.—This purchase of the place originally was a transaction between you and the former tenant?—Yes.

30681. It did not require any particular Act of Parliament to sanction that?—Oh, that was purchased in the ordinary course.

30682. So that you are in the possession of the tenancy?—Of the ordinary judicial tenancy.

30683. Sir JOHN COLOMB.—Now, you have been called on to surrender this interest, but have you made it known that you have never been made an offer?—It is not a year ago since I wrote to the Congested Districts Board.

30684. But the people do not know that?—But the people have no money to pay me.

30685. But what you said was this, that there were indications of a general feeling that you ought to give it up and all that. Have you made the people aware that you have never been offered anything for it, or that nothing of the sort has happened—have you made that known?—Oh, no; I could not run round telling these people that I think an offer should have been made. I think the first thing should have been to ask the Congested Districts Board to approach me about it, and ask me what I was prepared to sell it at.

30686. But the Congested Districts Board cannot be responsible for what other people say, and my point to you is in reference to these statements of these people; have you said to them, "Nobody has made an offer to me"?—I am sure I have said that to friends, to everyone that spoke to me.

30687. CHAIRMAN.—You think it is pretty well known?—The piece of land is purely a commercial transaction, and if I got a good price for it I would sell it in five minutes.

30688. What do you do with the land?—I till and graze.

30689. How much do you till?—This year only a few acres.

30690. About how much?—About forty acres of it is cut-away bog, and there is a part, about sixteen acres, which is good land. It could not be tilled. But I have this year eight or nine acres.

30691. Sir JOHN COLOMB.—Do you let it in conacre?—Yes.

30692. And have you done anything to improve the land—was it deteriorated by the conacre?—Yes.

30693. Have you done anything to reestablish it?—Yes, and I have manured a great deal with slag.

30694. And you have put it in good heart?—I have put it in good heart, and I have built a house on it.

30695. And you have got a herd?—Yes, with a farm of five or six acres.

30696. And you have put the land in good heart by expending money on it?—Yes, and built a house and slated it suitably.

30697. CHAIRMAN.—Are they your own beasts that you have got on it, or do you take in grazing?—Yes; I do not take in grazing. And it is a good sheep farm.

30698. And they are your own stock?—Yes, my lord.

30699. And are you of opinion that grazing pays better than tillage?—Ah, tillage to a man like me is nearly impossible.

30700. Why to a man like you?—Because I could not be out on the land, and labour is too dear, and I could do nothing at all myself; and drawing them up a mile or a mile and a half from here I could not get a reasonable day's work out of them. In fact, tillage only suits a man that can devote his whole time to it, and I do not know but someone else might be getting a turn out of it.

30701. Mr. SUTHERLAND.—Do you mean that if the Congested Districts Board were to exercise their power of expropriation there would be no difficulty except the matter of price?—Not a bit. I sold a farm of land a week ago and got £500 for it freely. And I would sell this one.

30702. And have you improved it since you got it?—I have, sir. It has cost me £500 or £600.

30703. I was going to ask you how many years' purchase that would be, but I suppose you cannot compare tenant right with years' purchase?—No, sir; it would be very hard to compute, because if land is rented cheaply it would take a bigger price than dear-rented land. The less the rent the greater the number of years' purchase would be.

30704. Would this land be suitable to enlarge small holdings?—I believe so, except that my land is on the extreme edge of the townland of Moylough that is sold. Mr. Cooke's farm runs between the small tenants' and mine.

30705. And is Mr. Cooke residing on the land?—He is not, and unfortunately there is a difficulty in his way that he has a maiden aunt of his as a tenant there, and she obstructed him in trying to have an exchange with the Congested Districts Board.

30706. And that does not make the transaction any easier, do you think?—It is not, except that she is very old. I am certain Mr. Cooke would let them have it at its fair value, but unfortunately it is not in his power.

30707. Then provided you got reasonable compensation for your purchase price and your improvements you would look favourably on any offer from the Congested Districts Board?—Oh, yes; my heart and soul is not stuck in it—I would not reside there for anything; if I got a price for it that I could just make as much of as I could make of the land, I would not keep it two minutes.

30708. Five per cent. on your expenditure?—If I got 5 per cent., that is, provided I could get it, I would be well pleased.

30710. Sir FRANCIS MOWATT.—Really, summing it up, you desire to come before the Commission to draw their attention to the fact that you valued this farm and that other people wanted it, and that you would be disposed to part with it if the Congested Districts Board expropriated you, at a fair price?—Certainly.

30711. And now you have brought that before the Commission?—However, I have heard statements made here that I entirely disagree with, that is as to the amount of non-residential land there is.

30712. Most Rev. Dr. O'DONNELL.—I should like to ask you in connection with Mr. Sutherland's question why should you expect a sum of money which would produce the amount of income which you derive as profit from that land?—I think I am entitled to something near the profits I derive from it.

30713. Is not there a good deal of superintendence of the property?—There is; I have to pay a herd.

30714. And you would be relieved from such superintendance if there was a sum of money invested?—Yes.

30715. And there should be a deduction for that?—Ah, not very much. I use a good deal of my own spare time and take a run up there. It is only a little over a mile.

30716. You are aware that the Congested Districts Board has power to take that land at a price?—I am not quite sure.

30718. I believe they have?—I do not know. I have not seen them doing it anywhere. That is one of the reasons I had.

30719. They have the power of bringing to an end even a judicial tenancy for the relief of congestion——

Mr. Doran (*Chief Inspector to the Congested Districts Board*).—May I state that the Board have already decided to exercise that power in Mr. Armstrong's case—to take up the farm from him under the powers that they have.

Witness.—Perhaps Mr. Doran would give information now why for the last twelve months the Board did not make the slightest move in that direction.

30721. Sir JOHN COLOMB.—Is that the first you heard of it since you wrote those letters—what Mr. Doran has stated now?—This is the first I heard of it. I never heard that it was intended to use any compulsion. They have not even given me any notice of any kind or asked me to sell up to now. And I wrote to them offering them to exchange.

30722. Mr. Armstrong, anyone like you should get notice, but it does not yet appear that the notice is an untimely one?—I do not say it is an untimely one.

Apr. 20, 1907.

Mr. Luke Armstrong.

30723. Would not it therefore be for you to consider the fair price at which you could sell the Board this land?—I think it would be first for them to suggest what they would give me, or to ask me how much I would want for it.

30724. There would not be the smallest objection to that. I am sure a price could not be looked upon as reasonable merely because the Board considered it a reasonable price?—No, but I think the first thing that should be done before there could be anything about compulsion would be to try to make a price, and then if I was unreasonable to exercise compulsion; but I think it an extraordinary thing to be said here that they can exercise compulsion without giving me the smallest notice or even asking me would I be willing to sell.

30725. Yes; the next thing would be that you should consider what the fair price would be in your opinion?—But I cannot say that that particular question was put to me by any person responsible.

30726. It would be time enough to do it still What I say is that it seems to me to be extraordinary to be told here that compulsion is to be resorted to without seeing first could it be done amicably.

30727. Are not the two things the same—no compulsion can be used without an arrangement between you and the purchasing people?—Why should not that be arrived at without my being told that compulsion is necessary.

30728. There is no question of compulsion except on the condition of a voluntary arrangement not being arrived at?—Yes, but they have the estate purchased over twelve months, and during that time I never got the smallest hint that they were prepared to purchase, and they had my letter and this query sheet that I filled up, and since then I have never had any word from them saying "We are prepared to buy. What price will you take?"

30729. But they cannot do everything in a day?

Mr. Doran.—They must wait till the estate is vested in them.

Witness.—I saw notices posted up here this time last year, I think about the 1st of May, that they had a number of residences on hand, Chaffpool here included, and some at Claremorris and Sligo and Galway, and the impression that struck me was that they were in non-congested areas, and I wrote to them to say would they exchange with me, and if I got what I thought a better one I would hand over this one in Moylough.

30730. Mr. Sutherland.—Did you specify the one you would exchange for?—I think I mentioned Chaffpool, but I would have taken any good agricultural holding at all in a non-congested area.

30731. Most Rev. Dr. O'Donnell.—The point you make would be got over when it is stated that the Board could not negotiate with you till they were owners of the property?—He says so now, but I am surprised at it, because they commenced and did some work in it nine months ago.

30732. Would you not consider also that the Board thought your offer was to exchange for Chaffpool?—Oh, Chaffpool would be out of the question. A neighbour of mine had been negotiating for it, and I dropped it on the spot. I mean Mr. Cooke himself, a man who would be most anxious to get it for various reasons.

30733. Is not that question of notice sufficiently explained by the fact of the property being only recently vested?—I think it is not, and I think the Board, before they attempt to use compulsion, should first satisfy themselves that there was no prospect of an amicable arrangement. It is very high-handed.

30734. Is not it absolutely necessary that when an estate is vested in the Board they should send an inspector to make inquiries and report to the Board?—I suppose it is.

30735. And that the inspector in his report to the Board should report necessarily upon the farms which the Board should acquire for the relief of congestion?—Yes.

30736. Is not it the duty of the Board to say "Such and such a farm is to be acquired by voluntary arrangement if possible, otherwise by compulsion"?—Mr. Doran has come here and stated that the Board has determined to use compulsion. He did not say that there was one word about amicable arrangement.

30737. Mr. Sutherland.—Is not the likely process to be this, that the Board, which does not meet every day, would say, "We want this. In the event of not acquiring it by arrangement, we have decided now that if compulsion is necessary we wish it to be enforced"?—I really think that without some consultation with me it should not be done, and the Board could scarcely call mine a non-residential holding at all. I got a good two-storey house put up there and stated and showed, at all events up to this, all the appearance that I intended to reside there; and the only point that they can make is that I have not gone there yet.

30738. Most Rev. Dr. O'Donnell.—It is not any question at all of taking advantage of you. The Board has simply to exercise its legal right for the relief of congestion. It is not free in the matter?—And if I resided there could the Board do it?

30739. I could not give you an answer, but I am not sure that even if you resided there the Board would not have the power.

Mr. Doran.—Being a judicial tenancy, the Board can determine it, whether it is residential or not.

Witness.—There are different farms here that have been put down as non-residential where the people had full-grown sons to occupy them.

30740. Sir John Colomb.—Can you mention one of those farms by name that was called non-residential but is actually and really residential?—I may mention farms that were in the acreage that was stated here to-day by Mr. Nicholson in his evidence that showed such a big acreage. Two of them belong to men who have grown sons over age, and another belongs to Mr. Boyers, and one to Mr. Layng.

30741. Did you get the names of the farms?—Mr. Boyers' and Mr. Layng's. Mr. Boyers has a son twenty-seven or twenty-eight, and he bought this farm at a sale by myself by public auction.

30742. Mr. O'Kelly.—When were these farms purchased by Mr. Boyers?—Six or seven years ago. Mr. Layng bought his farm from his father-in-law about the same time. It might be a year earlier.

30743. Where was it that any residence was put up on these farms for the past six or seven years?—Well, five or six—Layng's. And there is a herd's house all the time on Layng's—a fairly good house. He got a man to build a new house on it. That is Layng's case.

30744. When did he start building?—Two or three months ago.

30745. At any rate, he is in this position for six or seven years?—Yes.

30746. How is that farm used for the last six or seven years?—He is grazing it. He conacres it a good deal yet.

30747. Does he take any stock from local farmers?—I do not believe he does.

30748. Can you say that he does not?—I never heard that he did, and I know he has means enough to stock it.

30749. Now, with regard to Chaffpool, how many acres are there there?—I think there are about fifty acres altogether, a great deal of which is wet.

30750. Why did you drop the negotiations for an exchange of it?—Well, Mr. Cooke and I are two neighbours there, and it suited him and I did not care about it, and the houses are no value to me and they are very valuable to him.

30751. Is Mr. Cooke the master of the young man that gave evidence?—No, he is a brother of his. He owns a place out at Kilterna.

30752. How many acres does he own there?—I could not tell you. I am sure about eighty acres of good land.

30753. Which would you prefer to see the eighty acres being divided between people who needed the land or to hand it over to men who had eighty acres already?—Oh, I think the people near the land have the first claim on it; but he has eighty acres already; he has them for years. You are referring perhaps to Chaffpool?

30754. Yes?—On the conditions they wanted, Chaffpool was to go for Moylough. As far as the agricultural portion of it is concerned, Moylough is a far better farm. The place at Chaffpool is of very little use to a tenant.

30755. Most Rev. Dr. O'Donnell.—It is good land?—It is not. There is a great deal of it wooded, and that is no good for a tenant.

30756. Mr. O'Kelly.—Did you hear one of the witnesses state that there was more non-residential grazing land in the vicinity than there is really?—I say there is not so much. I would not call them non-residential, and people have them fitting up for their sons and still take a year or two out of them.

30757. How many cases are there in which owners are fitting out these farms for their sons?—I could not tell you, indeed.

30758. How did you come to the conclusion that there are sons?—I know the country well, and that they are in it. I did not get the names of them.

30759. But you flatly contradict the other witness?—Yes, I do.

30760. Tell me your knowledge of the question?—Because different farms were not read out, and how can I go round to search them?

30761. And when they were not read how can you contradict them?—I say the acreage was given.

30762. What is that acreage, Mr. Armstrong, that was read out, to which you take exception?—I think about 500 acres, or something about it.

30763. Five hundred acres in this district?—Yes.

30764. You say that there are not that number of acres?—I think not, non-residential. Probably it depends on two people, but I would not call those residential houses non-residential.

30765. But they are non-residential, it appears?—But it is well known they are bought for the sons of these men, and that they are prepared to go to them.

30766. But that is hypothetical. I want to find out the farms. What kind of information is in your mind that enables you to contradict one of the witnesses by saying that there is only so much non-residential land?—General knowledge of the district. The names of the particular farms have not been read out for me, and any man that likes can come up and make a statement, when you don't know the names.

30767. How many acres do you say there are?—I could not tell you really the amount, because I did not schedule it.

30768. If you cannot tell me how many acres of non-residential holdings or grazing lands are in this district, how are you in a position to contradict the witness?—From my knowledge of the district, unless he takes a circuit beyond all bounds. If he talks about the parish there is nothing like that amount in it, I say.

30769. I cannot decide, but I only want to ask you do you think it is fair that you should come up in the witness-box and contradict the statement of a man that there are 500 acres of non-residential grazing land, and that on examination you show yourself not to have the knowledge to justify you in making that contradiction?—Because I have ear-marked those holdings that he stated, that is, one of Boyers' and two smaller ones, and which he included as non-residential. I would call them residential.

30770. Mr. Sutherland.—Whether they are non-residential is surely not open to doubt. A man either resides in the place or he does not?—But where a man has the place bought for his son, and that son of age, and he is following farming, it is hardly fair to say that we are to take that farm as non-residential.

30771. A holding is non-residential, as I understand it, if it is a holding on which the man who holds it does not reside?—I know that is the technical meaning of it, but when it is bought by a man for a member of his family who is capable of keeping it, and that it is land that is intended for him I call it residential.

30772. May the whole difference between you and the other witness be your lack of agreement about that?—Yes; I say that he put on a meaning that no sensible man would consider correct.

30773. But he was perfectly honest and fair?—I do not impeach the man's honesty, but it is a mere difference of opinion.

30774. Mr. O'Kelly.—Did you hear the names of the occupiers read out by Mr. Nicholson?

Mr. Nicholson.—My lord, I handed them to the reporter—"Robinson's lodge, 200 acres (statute); Tullavilla, 20; Carnaleck, 100; J. Mullarkey's, 100; Layng's 40 (Irish acres); Boyer's, 42 (Irish acres); Mrs. Brennan, 30 (in Carsallagh); Michael Gallagher, 11; Phil Durkin, 10."

30775. Mr. O'Kelly.—Are those all non-residential?

Mr. Nicholson.—They are.

30776. Mr. O'Kelly (*to witness*).—These are all non-residential, are they not?—If he went a little further he could count just twice as much more by taking the Ox Mountains in.

30777. And that would make the case stronger?—But there are 5,000 acres on the Ox Mountains.

30778. The former witness said there were 500 acres of non-residential lands in the district. You point-blank contradicted him?—I qualified it, and I said these men had their sons living in the houses, and as there is a member of their family to go there they should not be considered as non-residential.

30779. I do not care whether a man intended to put his son upon the land, but this fact remains, that the ground on which you contradicted Mr. Nicholson cannot now hold water?—It can, sir. It is whether it is made suitable for a residential holding. I am certain that you did not come here to inquire what amount of mountain or bog is vacant.

30780. I do not care to pursue it further?—I do not care whether you do it or not, but I am certain the Commission is not here to inquire how much bog or land was waste or unsuitable for people to live on.

30781. Do you still persist in your contradiction as to non-residential?—Do you mean these 500 acres?

30782. Of non-residential holdings?—I will go further than he did, and I will say there is 5,000, and that will help you better if you get waste mountain and bogs, because I am certain that there is more than 5,000 acres in the Ox Mountains.

30783. Chairman.—I think the sole point of difference is the view that is taken of non-residential holdings. I understand what Mr. Armstrong thinks is that where there is a holding with a house in which a son is to live, a grown son, but which has not actually yet been handed over, that that is a residential holding. Is that your view?—I think that wherever a holding is stocked for the purpose of using it as a residence and that a man buys it for a member of his family it is residential.

30784. Sir John Colomb.—You might go further than Lord Dudley's question, and include a holding which a man takes with the idea of putting his son on it?—When he has a house built on it, as for instance, the holding of Mr. Boyers.

30785. Then, a residential holding in your mind is a holding which is held available for a residence for a son?—Yes.

30786. Chairman.—Would you limit it to a son?—Well, a son or daughter.

30787. But it might be a brother?—I think that would be going outside one's own family.

30788. Mr. Sutherland.—Are there many cases of that?—Quite a big lot.

30789. Are they new houses, those you know?—No; most of them are the houses that were there. Those are farms lately acquired and the houses that the former tenants occupied were on before them.

30790. They were residential holdings at one time?—They were residential holdings.

30791. Chairman.—Mr. Armstrong, are most of the men, from your knowledge, who own what are called ranches in this part of the world, men with grown up sons?—Well, some of them are. Now, for instance, Mr. Robinson, I believe, has no one to occupy after him, that is, there are two brothers, but there is no one to occupy after them.

30792. Would you say that most of them had grown sons?—Well, most of them. For instance, Mrs Brennan has a very big family herself, and some of them are full-grown, and she must send her family away if the land is taken from her, and they may turn on something else that may be at hand.

30793. Now, if a man with a grown family had two holdings, on one of which he lived and on the other he did not live, if he built a house and put his son on it that would make it a residential holding?—I think so, and I think it would be very unreasonable to take it away from him at all, and I think it would be unreasonable if his son could get the land that the land should be taken away from him, and I think it would be quite unfair to send him away. I say that he should have the first claim to it. Anyhow it would be most unreasonable to take it from the man who had a member of his own family to occupy it.

30794. And would you say it would make any difference whether he was the actual occupier?—If he worked for his father.

30795. And if he worked for his father and never lived in that part of the holding?—I say it would be most unreasonable to take it from him.

30796. Then, in your view, it would not make any difference whether the son was actually the owner or whether he was acting only on behalf of his father?—I think not.

Apr. 20, 1907.

Mr. Luke Armstrong.

30797. Well, in that case I suppose it would be always possible to turn a non-residential holding into a residential holding, given that a man has got a grown son?—Well, I think it would be very hard if that son spent his time working for his father and that the holding was intended for him, though he did not actually reside there.

30798. But you do not answer my question that if that is your view it would be always possible, would it not, to turn a non-residential into a residential holding?—I think where there is land and there is a residence upon it——

30799. That you could by putting in a son immediately turn it into a residential holding?—I think if you have a son who is working on the land in the demesne——

30800. I am asking you whether it would not be perfectly possible to turn a non-residential into a residential holding by a process of that kind?—I think it would be possible.

30801. And quite easy?—Quite easy. No one could tell what was in the man's mind. He might have intended that long ago and his inquiries might help him on also.

30802. I only wanted to know whether that was your view?—I think so.

30803. Most Rev. Dr. O'Donnell.—What would be the effect on the towns about if the future farming of the country were tillage, and the tillage caused the occupiers to employ more labour?—I think the towns would go on about the same.

30804. Do you say that there would be no improvement in towns?—I do not think so.

30805. You consider that the occupiers would not create more trade for the towns?—I think it would for the big towns, but speaking of small towns generally, the more congestion and the more poverty the better the trade of the town is. There is nothing very surprising in it. Where the farms are larger the people go to the bigger towns. I see the best of the people going off in the trains to Sligo and coming back with their parcels, and really we get the money from the poor people. I think a good deal of them go to Sligo, and I see them at the railway station coming home with their parcels. I really think that the smaller the towns and the occupiers are the more money is made on them.

30805a. Would you be in favour of keeping the people in poverty?—I would not indeed. I would be very sorry to suggest such a thing, but I know all about the business of a small town. The smaller the tenants are round it the better it is for the traders in the little town.

30806. Chairman.—Your argument, if I understand it, means that if a person has so much land that he becomes prosperous and well-to-do, the tendency of that man is no longer to deal with the local traders but to go off to the county capital?—They are no good at all for the small shopkeepers in their own towns.

30807. Is not that rather an argument against permitting too much land to be in the hands of one man?—I am not in favour of too much land being in the hands of any man.

30808. But it does mean that in order to increase the business of a local town you want greater distribution of land amongst the people?—Well, I do not think it will affect them much. I do not think, as long as the population is here, it will affect the local town much.

30809. I am not certain whether you were here when one witness who had to do with business said he had 1,400 customers, of whom 900 were regular customers. Now you would not call that very bad, would you?—It is very good.

30810. Would you not call that very good for a local town?—I would; but I should say that four-fifths of them are customers also of another shop in town, and probably a bigger percentage.

30811. Most Rev. Dr. O'Donnell.—Now, in pursuance of Lord Dudley's question, if you diminish the population and make the farms bigger you will not have so many people?—No; you will not.

30812. When the farms become large the people will go, according to your account, to Sligo and farther afield, and there will be no trade for Tubbercurry?—I think I made it quite plain that the better-to-do portion of the population are not at all inclined to leave all their money in Tubbercurry. When I go to the railway station I see those fairly well-to-do people who get bags and carry a lot of things, while the poorer classes go into Mr. Cooke's and Mrs. Hoyle's and everyone else that gives it to them, and they get a good turn out of their money.

30813. Chairman.—Those big people go into Sligo?—And even the ladies of the family.

30814. And as a shopkeeper you would be rather in favour of decreasing those large farms?—Oh, I think they should be decreased, but I was almost afraid of being contradicted. But, as regards the people who have made most money in small towns like Tubbercurry, it is done on the people's poverty, that is, that they cannot afford to go far and they must take credit at home.

Mr. Thomas Connor examined.

Mr. Thomas Connor.

30815. Chairman.—What is your address?—Doongeelagh. I first deal with the Doongeelagh estate. This estate is situate in the townlands of Doongeelagh and Coultalough, in the electoral division of Killadoon, in the rural district of Boyle Number 2. A particular grievance that the tenants have to complain is a multiplication of landlords, there being four landlords collecting rent off that estate.

30816. Sir Francis Mowatt.—Four landlords to the one estate?—Yes.

30817. How is that managed?—The estate is in the Land Judges Court, or the best part of it. There are four landlords, Mr. Robert Hamilton, Mr. Keogh Williams, Mr. James Shirley, and Mr. Robinson, of Dublin. He gets two parts of the rent from some of the tenants. They have the estate divided between them.

30818. Mr. O'Kelly.—Do you pay one landlord so much, and another so much, and four altogether?—The way it is with the landlords, they have the tenants divided, but at the same time the four landlords are on the property.

30819. You are a tenant on the property?—Yes.

30820. To how many landlords do you pay rent?—Two.

30821. How much is your rent?—£8. I pay £5 6*s.* 8*d.* to Mr. Robinson, and £2 13*s.* 4*d.* to Mr. Shirley.

30822. Do you pay to an agent?—Yes, lately to one agent, Mr Cox, and he gives me a receipt for each separately.

30823. It does not matter to you how much it is divided afterwards so long as you pay your £8?—It does; for he will come at me and process me. Mr. Robinson does not come at the tenants so severely as the other man. Mr. Robinson lets a year's rent run with us, while the other does not, and you have to pay one landlord up to the day or he serves you with a process.

30824. How long has this system been in existence?—I could not tell. The land is of the very worst quality, being extremely hard to till, and the crops, even in a favourable season, are deficient both in quality and quantity.

30825. Sir Francis Mowatt.—How much is your holding?—About fifteen acres, Irish. The tenants are unable to make out a living without constant remittances from their friends in England and America, and when those resources fall short, the tenants have to bear a very heavy burden in the shape of law costs as they have to bear those expenses at the suit of the four landlords. The estate is a portion of the Tawnagh grazing lands, at present let as ranches for grazing cattle.

30826. Do you know what acreage is let for grazing cattle?—About 100 acres. It is the desire of the tenants that the Estates Commissioners or some such public body would acquire the property, and if a scheme of migration was carried out by moving some of the smaller tenants to that portion of the property at Tawnagh now going to waste and the remainder of the holdings enlarged by the surplus land thus obtained and let to the tenants at a reasonable rent the tenants would be in a better position, and would not be so much at the mercy of a bad season or a shortage in the remittances from their friends in England and

America. This part of the property was formerly a barren waste, and a considerable amount of labour was expended on it by the tenants and their predecessors. One of the landlords made an offer to sell at the unreasonable price of twenty-four and a half years' purchase, which the tenants refused to accept. By a process of chicanery, that the landlords have resorted to, a good many of the holdings have been converted into future tenancies and the tenants in these cases are debarred from entering the land courts to have a fair rent fixed. The holding of one of these tenants, namely, James Conney, has been inundated by a small lake to the extent of five acres, and the landlords have refused any consideration. The four landlords are William Robinson, Keogh Williams, Robert Hamilton, and James Shirley. There are eight tenants under £5, eight under £10, and four over £10.

Apr. 20, 1907

Mr. Thomas Connor.

30827. Your object in coming before us is to state that you would like the Congested Districts Board or the Estates Commissioners to buy the land and migrate some of the poorer tenants on to the grazing land?—Yes.

Mr. Patrick Gallagher examined.

30828. Chairman.—What is your address?—Creevan, Killoran. I am a farmer. It is not necessary to take up so much of your time as some of the other witnesses. I just wish to give you a list of some of the non-residential farms in our district. On the Dodwell estate there are 253 acres of non-residential farms, and there are also Kilcullen, 53, Golden, 58, Conboys, 91, M'Carrick, 48, Phibbs, 108, representative of Stokes, 104, and Dane Heather, 305.

30829. Sir Francis Mowatt.—Where are all these farms?—In the parish of Killoran, in the Coolany division of the Tobercurry rural district. Major O'Hara has 357 acres, and Mrs. Geddes 126 acres.

30830. You are stating the amount of non-residential grazing land in the Coolany electoral division?—And the Carnaskea electoral division.

30831. What is the total acreage?—Over 1,100 acres.

30832. You say there are 1,100 acres of non-residential holdings in your district?—Yes, from which, of course, several families were evicted during the forties and the fifties. It is a very poor district. There are a lot of uneconomic holdings in our district, on the mountain slopes, bad, miserable patches, the occupiers of which come across the river to those non-residential farms and pay a high price for con-acre and grazing purposes.

30833. I gather you think these should be acquired by the Congested Districts Board?—Yes; or the Estates Commissioners.

30834. And the small holders in the neighbourhood should be put upon them or have their holdings enlarged?—If possible.

30835. Mr. O'Kelly.—Dodwells has 253 acres?—Yes.

30836. How is that land let?—Portion in grass and portion in con-acre.

30837. To the local people?—To a grazier on the eleven months' system.

30838. How far does the grazier live from these 253 acres?—About three or four miles.

30839. What is the extent of his home farm?—He is a mountain man. He has probably thousands of acres on the mountain, but he has no arable land.

30840. Has he any other grazing farm elsewhere in the county?—Not that I am aware of.

30841. Take Golden; is he a grazing tenant?—He lets it in con-acre, and takes in grazing cattle.

30842. How far does he live from that place?—About a mile.

30843. How many acres has his home farm?—Fifty or sixty.

30844. He lets this in con-acre or takes in beasts?—Yes, if able to stock it himself he would not do so.

30845. He does not stock it himself or till it?—He does not.

30846. How far off does Conboy live?—He lives in the County Leitrim. He is a grazing tenant

30847. Does he stock it himself?—He does, entirely. He takes in no beasts.

30848. What is the extent of his home farm?—I don't know.

30849. How far off does M'Carrick live?—About a mile.

30850. What is the extent of his home farm?—Fifty acres. He grazes it himself.

30851. What about Stokes; does he live far away?—The representative of Stokes is living there at present, but he has a home farm of his own, about 150 acres.

Mr. Patrick Gallagher.

30852. Major O'Hara, I suppose, lets his in grazing?—Yes, on the eleven months' system. He lives on his property within a couple of miles. Geddes lives about four miles away, and has a home farm of 500 or 600 acres.

30853. Are the districts which comprise these lands scheduled?—They should be scheduled, but are not.

30854. Would I be right in thinking that these districts contain uneconomic holdings which need special treatment just as much as the holdings in the scheduled districts to which the Congested Districts Board devote their attention?—That is quite correct.

30855. Are any of these men shopkepers?—No.

30856. You are aware that there are some men living in towns who have shops in a small way but who make their livings entirely by land out in the country; their land is there but they live in the towns?—Yes.

30857. Suppose it was shown that these shopkeepers in the town who have fifty or eighty acres in the country derive their livelihood from the land, and could not make their livelihood otherwise, would you be in favour of expropriating them from the country and taking up possession of the farms?—Certainly I would, so long as they had a good position in the town.

30858. I am suggesting to you that their livelihood is made on the land. We have cases of that kind all over the country; would you make a discrimination in favour of shopkeepers such as that?—Certainly I would.

30859. Mr. Kavanagh.—I suppose some of these men who have home farms till more on that farm than they would if they had not the outlying grazing farm?—They would.

30860. They use them in connection with their home farms?—They do.

30861. Would you think that the term non-residential would apply to them at all?—I think so.

30862. They are actually using those two farms, one in connection with the other?—No.

30863. My point was, I asked did they till more on the farm than they would if they had not the other farm to graze on?—Probably they might, but that class of men don't live by tillage or by farming properly, but by grazing.

30864. They use the two, one in connection with the other?—They do.

30865 Would you put them in the same class as a man who simply takes in grazing cattle?—Certainly I would.

30866. You make no difference?—I see no difference in it. Another matter is, there is an evicted tenant on a neighbouring estate in the Carnaskea Electoral Division who cost the ratepayers and the State a sum of £384 during the last sixteen years. She was ruthlessly evicted, and had to be confined in Sligo asylum ever since until recently when she died. Her name was Catherine Mullins, and I think the next-of-kin would be entitled to get the place back from which she was evicted.

Mr. Peter Cawley examined.

30867. Sir Francis Mowatt.—What is your occupation?—I am a farmer. I come from the same place as the last witness. My holding is about twenty-three acres. It is on Major O'Hara's estate. What I want to state simply is this. We want, if possible, to get the district scheduled as congested. There are 103 families in the Carnaskea division on the mountain side. The occupants of these small holdings were

Mr. Peter Cawley.

Apr. 20, 1907.

Mr, Peter Cawley.

evicted from some of the non-residential farms which the last witness gave evidence of, and we would like the Commission, if possible, to come and inspect this place. We have these 103 families there. You could compare them to nothing but birds in a cage. When the flood is in the river they cannot come across to go to fair or market with a pig, a heifer, or a firkin of butter. They have to come out the day before. They could not come out at night, and next morning if they want to take back a twenty stone bag of meal they have to make three parts of it and carry it on their back.

30868. You mean that there are no roads?—There are no roads in the mountain places. These same men have to come off that mountain and take conacre on this 300 acres at from £5 to £6 an acre, and the very moment they take the conacre at Christmas they have to sign bills in the bank to draw the money in November.

30869. They have to borrow the money to take the conacre?—No. They give the bills to the owner of the land and the owner draws the money. When these poor creatures have the potatoes taken out of the land they have to leave them in pits. They could not take them over until the flood goes down.

30870. You are putting the same point as the preceding witness, showing the necessity for the Congested Districts Board to purchase part of the estate in order to put these poor people, whose condition you have been describing, on to better holdings on the non-residential land?—That is my point; and regarding evictions, there are several cases of people evicted from those non-residential farms. There was one case in particular that the last witness referred to. The woman was evicted sixteen years ago off the non-residential farm. After the eviction, the agent, Mr. Robinson, ordered his bailiffs to set fire to the poor creature's home, which they did, and the poor creature fled and was found by the police eight miles away, in Ballymote, mad. She was taken from Ballymote station and brought into Sligo asylum. No one knew who she was, but I (as a governor of the asylum) made inquiries and found she was the woman who had been evicted. She died last Tuesday month, after remaining all these years in the asylum and costing the taxpayers £384. If she had been left her small holding of 3½ acres there would have been no expense to anybody. Another painful case of eviction was that at Culhouna, five miles from there. That creature is an inmate of Sligo asylum. The landlord who evicted her is Colonel Campbell, of Sligo. She has been there for nine years at an expense of £24 a year to the ratepayers. What I would suggest to this Commission to do is to call upon the Estates Commissioners or the Congested Districts Board, I don't care which, to investigate those cases, to restore these people or their next-of-kin to the little holdings from which they were evicted. I would ask the Commission to have this district scheduled, because the people were evicted from these grass lands and those who did not die were hurled into the mountains or had to go to America. God knows it would be well worth a drive in the motors to go down and witness the state of that locality.

30871. Mr. KAVANAGH.—The first district you mentioned was not scheduled, where there was no road?—It was not scheduled. If it was scheduled it would not be in the position it is at present.

30872. Is that Major O'Hara's property?—No; Thompson's, of Knockadoo, Sligo.

30873. We had evidence that Major O'Hara had made good roads, and I believe that to be an accurate statement?—He has good roads on his property, but when Major O'Hara was offering for sale he would not sell for less than twenty-six years' purchase and the sporting rights. There is portion of the parish scheduled, namely, where Mr. Gorman holds a farm of 250 acres. That portion is scheduled. The rest of the parish is not.

Mr. PATRICK M'MANANNY examined.

Mr. Patrick M'Mananny.

30874. Sir FRANCIS MOWATT.—You live at Cloonloo, in the Killaraught Electoral Division of Boyle No. 2 Rural District?—Yes. The division is divided by Lake Gara into two portions, Cloonloo, or the northern portion, and Killaraught, or the southern portion. The Cloonloo portion is mostly barren land, bog, mountain, and shrubberies, and is highly congested. The number of householders in the Cloonloo portion is 185. The gross valuation of those 185 is £720, or an average of about £3 17*s.* 10*d.* per householder. There are 96 of those 185 valued at £4 and under. There are 79 whose valuation is between £4 and £10; six between £10 and £15; and four between £15 and £20. A large number of those small farmers have to go to England every year to earn for themselves and their families, and were it not for their earnings and the money they receive from their families in America they would not be able to live at all. Killaraught proper, or that portion south of Lough Gara, is all rich land and chiefly composed of grazing ranches. My information is that there are 900 acres of untenanted land in Killaraught, so that the cure for the congestion in Cloonloo is at our very doors if only the proper steps are taken to relieve it. Those 900 acres would give 20-acre farms to 45 out of the 96 in Cloonloo whose valuation is £4 and under, and in a great measure relieve their condition. But even if the congestion was removed, a large portion of those left behind would never be able to make out a decent living owing to the quality of the land, and would require special treatment which should consist of money grants to enable them to reclaim and drain their land, and make roads, which in some places are also much required. My belief is, taking the half-parish of Cloonloo as a whole, that it is none better than the worst portion of the Dillon estate, which was bought at fifteen years' purchase. This Cloonloo portion of Killaraught division would be scheduled as congested from the start only for the ranches and large valuation in Killaraught. There are two men named Duke in Killaraught whose valuation is £413 15*s.* and £404 5*s.* respectively, or £88 more than the 185 householders in Cloonloo.

30875. Do those two men you mention hold the 900 acres between them?—No; they hold 683 acres.

30876. How are the 900 acres in the southern portion held?—They are untenanted and grazing farms. I thought there would be men here from the southern portion, and I did not get the valuations or the names of the men, but I can send them to the Secretary of the Commission. What I would suggest is that you or some members of the Commission would go visit the district to see for yourselves. I have anticipated a great deal of the evidence which was given here, and cut it short, but there are many grievances and many ways of relieving them.

30877. You say that in the north portion there is this very large number of poor people, and on the south side there are 900 acres of untenanted land, but you don't know whom they belong to?—No; I have not the names, but I could give you the names of the townlands.

30878. Mr. O'KELLY.—Is the Electoral Division of Kilfree scheduled?—Yes. I represent that on the County Council.

30879. They have only 202 holdings under £10 valuation, whereas in Killaraught you have 225. Does not that show that the law as it at present stands is defective and that the present definition of congestion is not altogether satisfactory?—Certainly. It is not satisfactory. Only for the large grazing ranches in the southern portion we would have been scheduled long since.

30880. Mr. KAVANAGH.—I suppose you would recommend migration as a cure for congestion?—Yes.

30881. Suppose you took away two out of three of those small holders would those left behind be any the richer by the amalgamated holdings?—Certainly.

30882. It would make them better off?—It would.

30883. How much can a man and his son till of that land?—As far as that is concerned a man and his son could do what they will do with a loy and a shovel.

30884. How much is that?—Two Irish acres.

30885. Is this a class of land that ought to be all tilled?—It is not. In the half-parish there are only fifty acres on which a plough could run. Therefore it has to be done by the spade, the loy, and the shovel.

30886. If you gave them two holdings would you make them better off?—Yes.

30887. They could not live on it?—They could to a certain extent. Take the case of a man with one cow. If he got a place to keep three cows he could live better.

30888. Would he then leave all the place in grass?—It would be mixed farming, and if you increased the holding of that man and his son it would improve their condition.

30889. How many years would that class of land stay in grass?—About five.

30890. Sir Francis Mowatt.—Then it would go back?—It would go back to its original nothingness. That is the point about the necessity of drainage, which is required very much.

30891. Is it on the hillside?—Part of it is and part of it is level. Part of it is almost the highest land in the County Sligo.

30892. Mr. Kavanagh.—Your opinion is it would improve the condition of the one that is left there to take up the holdings of the other two?—It would.

30893. Sir Francis Mowatt.—If you give a man the land of the next two holders, who are migrated, how many acres would he have?—As far as some of the portions are concerned he might have 100 acres of this mountain land. *Apr.* 20, 1907. Mr. Patrick M'Mananny.

30894. The holding, as a rule, is about four or five acres of land?—Apart from the grazing rights. They are all small farmers. Some of them hold twenty, twenty-five, and thirty acres, but still, owing to the quality of the land, they are not comfortable.

30895. Sir Francis Mowatt.—But to raise them to ninety acres, it appears to me, would leave them worse off than now. They could not keep ninety acres going?—I did not say that.

30896. Mr. Kavanagh.—Even forty acres?—That depends on the quality of the land and how it would be got. Of course, in some places if you gave them 200 acres of land they would not live on it, and in other portions on a twenty acre farm a man might live very comfortably.

Mr. Thomas Moran examined.

30897. Sir Francis Mowatt.—You live at Achonry, and are a farmer?—Yes. I am appointed by the Achonry Branch of the United Irish League to give evidence before this Commission. I wish first to refer to the Armstrong Estate. This estate was purchased by the Congested Districts Board about three years ago. The area of tenanted land is 3,524 acres; untenanted, 326 acres; purchase money for whole estate, £44,000; poor law valuation of entire estate, £1,783 11*s.*; number of years' purchase, 24¾ of the valuation. These are the figures given by Mr. Wyndham in the House of Commons in answer to a question put by Mr. O'Dowd, M.P., on the 5th July, 1904. Most of this estate is situate in Achonry, where there are about seventy tenants under £10 valuation, and would have been scheduled as congested only for the waste ranches which were let to graziers on the eleven months' system, thereby depriving the poor tenants of any assistance from the Congested Districts Board. This estate was bought over the heads of the tenants, and they were not consulted in any way about the matter, nor did they know how many years' purchase they had to pay for their holdings; but at the request of the tenantry the parish priest, the Rev. B. Quin, wrote to the Board to ascertain what price they would have to pay, and the reply received was twenty years' purchase on first judicial rents, twenty-three years' purchase of second. The tenants deem this price excessive for the following reasons:—A great many of these poor tenants never had a judicial rent fixed, but accepted three shillings in the pound abatement each year. They owed arrears and hanging gale, and when they spoke to the agent about having a fair rent fixed he told them he would process for all arrears, which meant ruin to the poor tenants, and thus they were deprived of the benefit of the Act. These tenants, had they a free hand, would have got five or six shillings in the pound. The majority of the tenants would not be able to maintain themselves for one-quarter of the years were it not for the remittances from England and America. There are about sixty migratory labourers who go to England every year to earn the rent and help their parents and remainder of family to eke out a living at home. The Congested Districts Board should make a personal inspection of each man's holding before purchasing, and see if the estate they were purchasing was security for the price they were paying. This was not done on this estate, and the price they paid for it is excessive when compared with the price paid for an adjoining estate purchased under the Act of 1886. Lord Norbury's estate, adjoining this estate, was sold at sixteen years' purchase. The land is far superior to the Armstrong estate, and the tenants will get a reduction of two shillings in the pound at the end of every ten years. The first two estates purchased under the Act of 1903 in the County Sligo were the Marginson Estate and the Armstrong Estate. The former was bought at 13¼ years' purchase and the latter at 24¾ years' purchase, although the number of acres of untenanted land on the Marginson Estate is comparatively larger. The following are the figures given in answer to Mr. O'Dowd's question in Parliament:—Marginson estate, 506 acres tenanted; 405 acres untenanted; £4,412 purchase money; £171 13*s.* 6*d.* rent of tenanted land; Armstrong estate, 3,524 acres tenanted; 326 acres untenanted; £4,400 purchase money; £1,899 11*s.* 2*d.* rent of tenanted land. The tenants on this estate feel aggrieved, for although the Board has purchased the estate nearly three years, the tenants have derived no benefit under the sale up to the present. This is the third year's rent the Board will have collected, and take the average reduction, the tenants would be entitled to 6*s.* 8*d.* in the pound, as five-sixths of the tenants are first judicial tenants. The Board will have extracted from the poor tenants one year's rent, or £1,899 11*s.* 2*d.* If the tenants bought direct from the landlord or from the Estates Commissioners they would get the benefit of the purchase since they bought, and nearly all the first judicial tenancies had expired before the purchase of this estate, and the tenants were prepared to go into court to have a second judicial rent fixed, only they expected to get the benefit of the purchase. It is very unfair of the Board to be demanding the full rent for the third year. The Board purchased all arrears on this property, some of which accrued twenty-five years ago, and the landlord found it impossible to collect them, as the people had no means to pay. The Board sued in all cases for the arrears, and there never was any combination of the tenantry against paying rent on this property. The people were indignant to see that the Board made a rent-collection machine of itself to collect the arrears, taking out decrees and sending sheriff's bailiffs and seizing on these poor tenants' cattle. Mr. Thomas Moran.

30898. Mr. Kavanagh.—Are they not getting the benefit of the improvements those three years?—Nothing.

30899. Has not the Board improved the place?—Nothing on the tenants' lands, only what they are doing on the ranches.

30900. Sir Francis Mowatt.—But they have handed over the holdings to the tenants?—They are handed over, but the tenants derive no benefit from these ranches and they are collecting the full rent all the same.

30901. Mr. Kavanagh.—They have not broken up the ranch yet?—No.

30902. They are grazing it?—I think they have it apportioned now into economic holdings. The Board should not buy the arrears from the landlord unless they get a grant to wipe them out. Another matter which affects the interests of the tenants is that tenants from County Mayo were put in on the ranches before the claims of the small landholders were considered. In answer to Mr. O'Dowd in the House of Commons, Mr. Long, Chief Secretary, and Chairman of the Congested Districts Board, promised that there would be no person imported into the district until all the uneconomic holdings on the estate would be enlarged. I can produce those documents, and yet, in violation of that promise they imported a certain party—I won't mention names—in on the demesne lands. Now, if the Board want to deal fairly with the tenants there is no room on the estate for importation. There are about seventy small tenants under £10 valuation, and, in my opinion, the land

Apr. 20, 1907.

Mr. Thomas Moran.

available will not suffice to give economic holdings to such a number. There are herds who were evicted on those ranches for refusing to herd for the graziers, also young men who left the employment of the graziers, and their claims should have been considered before the Board imported any person into the district. Only for the prompt action of the Nationalists of the district the Board would not have been the purchasers of the ranches, as the graziers were negotiating with the landlord to purchase the tenants' interest of those ranches at the time the agitation was raised against that pernicious system. Now, if Government is serious in its profession of planting the people on the lands of their forefathers, why not give compulsory powers to the Congested Districts Board to purchase those waste and non-residential holdings at a fair price and supply them with sufficient funds to enable them to carry out this project. They would be able to give an economic holding to every young man in Connaught and thereby prevent the bone and sinew of our land from emigrating to foreign lands There is no local industry, only lace-making. There is a nice technical hall in the parish, built by Sir Josslyn Gore-Booth free, and handed over to the Parish Committee. There is a competent teacher in this school, but the Committee are greatly handicapped for not having sufficient funds to work up this industry. I think the Congested Districts Board should give a free grant to this institution and provide a market for the work performed by the young girls attending those classes. Another matter that would benefit this district is the drainage of the Owenmore, as some of the tenants' lands are periodically flooded by tributaries of that river. To sum up my evidence in a condensed form I make the following suggestions:—(1) That the Congested Districts Board should inspect all estates before purchasing and see that the holding of each tenant will be purchased at a fair price. (2) That they get compulsory powers to purchase all waste land and get sufficient funds for to carry out that project. (3) That the Board should make roads for the tenants and drain the lands on every estate they purchase. (4) That the tenants should get the benefit of the sale since it was purchased and that a free grant be given to the Board for all improvements on the estate. (5) That the claims of all small landholders and eligible young men be considered before they import any person into the estate, as there is plenty of waste lands in Connaught to meet those requirements. (6) That the Board should have power to give a free grant to any industry which exists in the locality.

30903. Sir Francis Mowatt.—You say that the Congested Districts Board should provide a market for the work of the young girls attending the technical classes?—Yes.

30904. That is a difficult thing to do?—The Agricultural Department provides a market for other commodities and I don't see why the Congested Districts Board should not do it.

30905. Mr. O'Kelly.—What class of work is done in this school of Sir Josslyn Gore-Booth?—Lace-making.

30906. Must not it find its market as in the case of all other goods?—Yes, but it should not be thrown over for the want of a market at first.

30907. Where did you get the teacher from?—From Banada.

30908. Did you get her through the Department of Agriculture?—Certainly.

30909. Is the school conducted under the Department of Agriculture?—They have a grant from the Agricultural Board.

30910. Have you a grant from the local agricultural centre?—We have to equip the school ourselves.

30911. What did the equipment cost?—We left that in Father Quinn's hands.

30912. Don't you think it fair that the local people should do something to equip the school when a generous local landlord built it?—They did equip the school.

30913. Did they get any assistance in the way of equipment from the Department of Agriculture?—They got only the grant from the county committee.

30914. If you had more funds is that school capable of development; could you accommodate more pupils?—Certainly.

30915. How many have you at present?—Only about thirty or forty.

30916. How many could you have if your finances were more extensive?—There could be 100.

30917. Sir Francis Mowatt.—That is supposing they could sell the lace?—Yes. If there was encouragement for the work they would be able to do so.

30918. You say that the Congested Districts Board should inspect all estates before purchasing and see that the holding of each tenant will be purchased at a fair price. At present they can only purchase it for a price that they can get it at?—It was purchased over our heads. The tenants knew nothing at all about the price.

30919. What do you mean by waste lands which you say the Board should have compulsory powers to purchase—do you mean throughout the congested districts?—Non-residential holdings—the 11 months' grazing land all over Connaught.

30920. You think all non-residential holdings should be purchased?—Certainly.

30921. The Congested Districts Board should be given funds to carry out that project—that is to purchase all non-residential lands that are required for providing a sufficient number of economic holdings for the congests?—Yes, and for eligible young men.

30922. You suggest that the Board should make roads for the tenants and drain the lands on all estates that they purchase—don't they do that now?—They have not done it on our estate yet.

30923. Not on the Armstrong estate?—No, except through the ranches.

30924. We went out there yesterday, and went over a lot of new roads?—It was on ranches you went. You did not go on the old tenants' land.

30925. The ranches have become tenanted land now?—They are paying all attention to them.

30926. The ranches have been handed over to the tenants?—They have, by the Board, but not by the Commission yet.

30927. Mr. Kavanagh.—They collected the rent for three years?—Yes.

30928. Mr. O'Kelly.—Did you pay the rent in full?—Yes. The Board purchased three years ago. The tenants have paid the third year's rent in full. They did not sign the agreement.

30929. How did you get that information?—Through Mr. O'Dowd's questions in the House of Commons.

30930. Are the improvement schemes going on on the property?—They are giving grants in some cases.

30931. Are they expending money on improvement schemes?—Yes, on the ranches that they are handing over to those tenants, but not on the tenants' lands up to the present.

30932. Mr. Kavanagh.—Perhaps the tenants' lands don't want improvement?—They do. Part of the property is affected by the Owenmore.

30933. Sir Francis Mowatt.—When you suggest that the Board should have power to give a free grant to any industry which exists in the locality, you mean any industry that requires development?—Yes.

30934. You don't propose that any industry which exists in the locality should be permanently carried on unless it can be carried on profitably?—Certainly not. It would not be worth carrying on unless it could be carried on profitably.

Mr. Patrick Slein examined.

Mr. Patrick Slein.

30935. Sir Francis Mowatt.—What is your address?—Ballinafad, Boyle. I am a farmer.

30936. What is your holding?—About twenty-three English acres. It is in the Boyle No. 2 Rural District, Electoral Division of Aughanagh. I am anxious to lay before the Commission the following points:—1st. There are thirty-four holdings in the Electoral Division of Aughanagh, Boyle No. 2 Rural District, under £5, and, in addition, there are seventeen families who are unrated. The average valuation of those thirty-four families is £2 10*s*. Many of them live in huts with a few acres of barren mountain around them, and in order to sustain life these people have to send their children to England

and America to earn for them the necessaries of life. American remittances have been received directly or indirectly, I believe, by almost every person in the division. The total valuation of the division is £2,126 1s. Of this four people own £847 worth leaving the average valuation of the remaining 156 at about £8. Whilst this state of things exists there are 424 acres of untenanted land of the very best quality in the district. I consider it only in accordance with common justice that this land should be divided among those poor people. Another difficulty is that the people are paying big rents for bad lands, whilst they are surrounded on all sides by estates sold to the tenants, who in this respect have an advantage over them for the time being.

30937. What is the estate on which the holdings are?—The Phibbs and Ffolliott estates.

30938. The point you make is what we have had before; that the Congested Districts Board should be empowered to purchase the 420 acres of untenanted land and use this land for increasing the holdings of the small holders?—Yes. Offer what you reasonably may, the landlords on which this land is refused to sell. One would sell, but at a price so exorbitant that the tenants could not purchase at that price; the other man would sell at over twenty-seven years' purchase.

30939. So that in both cases the sum asked by the landlords was such as the tenants could not afford to give?—Yes.

30940. And therefore your hope is that compulsory power should be given to some authority, whether the Congested Districts Board or other authority, to compel purchase at a reasonable price?—Yes. Some of this land is very bad mountain land. For this land Mr. Phibbs, of Seafield, has demanded over twenty-seven years' purchase, and said it was more than the tenants had a right to expect. They could not give that. So the people must remain paying these big rents or leave it.

30941. That is what we have had forced on us very much; compulsion is absolutely necessary to enable grass lands to be obtained for increasing the holdings of the small tenants?—Yes. I believe compulsion is necessary. On the Phibbs estate a lot of parties are prevented from going into court. About thirteen years ago one townland was held in rundale. The landlord got this land striped, and fixed a new rent on it. These tenants had to sign new agreements. They found, when they went to get judicial rents fixed afterwards, that they were returned as future tenants and prevented from going into court; so they still have to pay exorbitant rent.

30942. Mr. KAVANAGH.—Was it fixed since 1896?—No. It was about twelve or thirteen years ago that this arrangement was made.

30943. Mr. O'KELLY.—Would you like to have the law so altered as to remedy the grievance?—Yes, so that those parties would have a right to go into court and have a fair rent fixed. One of the tenants who would not agree to the re-striping arrangement, and did not sign the new agreements, went into court and got seven shillings in the £ reduction. There is a lake which causes flooding, and I was asked to bring under your notice that there are about 200 acres in that electoral division which get flooded periodically and do great damage.

30944. Sir FRANCIS MOWATT.—Would you suggest the draining of that lake and relieving those floods as one of the works that the Congested Districts Board should carry out?—Yes. The water comes back from the lake and it costs a lot of money to the ratepayers to repair the road. If the drainage were done no money would have to be expended on the road.

Mr. EDWARD DURCAN examined.

30945. Sir FRANCIS MOWATT.—Where do you reside?—I live at Ballincurry, Curry, Co. Sligo, and am a farmer. I am a tenant on Messrs. Knox's Bellaghy estates, Curry, Co. Sligo. We wrote to Messrs, Knox on 15th May, 1904, asking them to sell their estate to the tenants. In reply to this letter we were told by two of the owners that if we were anxious to buy our holdings we might put the Congested Districts Board in motion. We wrote again to the landlords on the 12th September, 1904, asking them to sell to the Congested Districts Board. We also wrote to the Secretary of the Congested Districts Board, asking the Board to buy. On behalf of the tenants, I received the following letter in reply from the agent, Mr. Weldon Moloney:—"28, South Frederick-street, Dublin, 15th September, 1904; Messrs. Knox's Estate. Sir,—I beg to acknowledge receipt of yours of the 12th inst., enclosing copy of resolutions of meeting of tenants of above estate, and my clients having received similar letters request me to reply on their behalf, and accordingly I have to inform you that I have been in correspondence with the Congested Districts Board office on the subject of a sale, and have had interviews with the officials, and I understand that as the estate is circumstanced at present and owned in individual shares the Congested Districts Board would not purchase, but apart from this fact, having investigated the prices usually given for congested estates, where there are no grass lands on hands which could be included on the sale, the Messrs. Knox are not disposed to go to expense in furnishing all the detailed particulars required by that Board when they feel confident that the price that would be offered could not be accepted, unless there was some prospect of their being offered such a price as they would feel disposed to accept.—Yours faithfully, Weldon C. Moloney." Seeing that there was no prospect of a sale to the Congested Districts Board we wrote again to those landlords on the 7th of October, 1904, asking them what number of years' purchase they would sell the estate to the tenants for. I received the following reply from Mr. Moloney:—"28, South Frederick-street, Dublin, 10th October, 1904. The Messrs. Knox's Estate. Dear Sir, —In reply to yours of the 7th inst., asking what number of years' purchase the Messrs. Knox would be willing to sell their estate to the tenants for. The Messrs. Knox are not at all willing to sell their estate, and therefore they do not see why they should make a proposal; but if some person, who is duly authorised by all the tenants to bind them, makes an offer that is reasonable, I will submit it to the Messrs. Knox, but cannot say whether it would be accepted or not.—Yours faithfully, Weldon C. Moloney." We ask the Government to pass a compulsory purchase Bill in order to deal with landlords of this kind, otherwise the tenants are powerless to deal with them. In order to show the necessity for inspection of holdings I give the following sales under the Ashbourne Act, in the parish of Curry:—Coragan estate, purchased at from five to eleven and a half years' purchase, averaging about nine years. The tenants and landlord agreed at fourteen years' purchase on this estate. When the Government Inspector came on the estate he found it was not value for fourteen years' purchase. Other examples are the M'Dermott estate, purchased at eleven and a half and twelve and a half years'; Lord Norbury's estate, purchased at fourteen and sixteen years.

30946. Mr. KAVANAGH.—That is under the Ashbourne Act?—Yes. It is according to the value of the land, and we think that we tenants on the Knox estate should not be asked to pay more in 1907 than tenants on adjoining estates paid under the Ashbourne Act.

30947. On first term rents?—Yes. Most of the tenants on the Knox estate are first term rents. There may be a few second term rents, but not many

30948. Still the fact remains that you do not appear ever to have made an offer?—We did not. There is another estate adjoining the Knox estate, Sir B. Bromhead. He agreed to sell at fourteen years' purchase nine or ten years ago. He wants twenty years' purchase now.

30949. Sir FRANCIS MOWATT.—How did it fall through before?—Owing to some misunderstanding between himself and an adjoining landlord as to a bog the sale fell through. The greater portion of the land in this locality is very wet and swampy, and we request the Government to start a drainage scheme with a view to having the following rivers sunk:—The Cashill and Ballincurry River, the Drombane, Ballincurry, and Carrowinkeen River, and the Black River, running from Cloonmore to Bellaghy. Those rivers empty into the River Moy and the Corse River.

Apr. 20, 1907.

Mr. Edward Durcan.

All those rivers overflow, and cause great damage to crops and loss to farmers.

30950. Your last suggestion is that the Congested Districts Board should undertake arterial drainage?—Yes.

30951. That would contemplate that the landholders should drain into the central drains which should be carried out by the Congested Districts Board?—Yes.

Mr. Michael Maye examined.

Mr. Michael Maye.

30952. Sir Francis Mowatt.—You are a farmer?—Yes, residing at Powellsboro', Tobercurry.

30953. What is the extent of your holding?—Fifteen statute acres.

30954. In what Electoral Division is your holding?—In the Tubbercurry electoral division, on the Powell estate. I am a small farmer on the Powell Estate, Powellsborough, Tubbercurry, the number of tenants being about seventy-five, the average tenantry valuation, as may be seen by the rate-book, being no more than £2 14*s.* per holding, three holdings alone being valued as high as £10, and the remainder ranging from 10*s.* to £6 10*s.* The landlord lives on the estate, which has not been purchased under any Act, and which, in my opinion, is one of the most congested in Connaught, and deserving of special treatment. Though there is a fairly large supply of bog on the estate, which by providing proper road accommodation could be made more valuable, there are about twenty-four holders of small farms on the property who are not in possession of any turbary, and who, for many years past, have had to obtain bog on adjoining estates, notwithstanding the fact that the landlord has been for years supplying outsiders.

30955. The landlord would not allow them to get turf on his estate?—No, and he supplies outsiders; and as those tenants on the Powell estate who have no turbary have even been refused turbary on the adjoining estates lately, they are in the unenviable position of neither having turbary nor being able to procure it in the district. There is a grazing ranch on the estate in the occupation of the landlord, and the division of this would in some measure relieve the congestion, but though the Congested Districts Board some twelve months ago was approached with a view to having them buy the estate, nothing came of the matter, as the landlord was unwilling to part with the ranch.

30956. What is the size of the ranch?—About seventy acres.

30957. Did the Congested Districts Board attempt to buy—did they make a proposal to the landlord?—I think they did. We sent a petition to them to come and buy, because we had no bog or road accommodation.

30958. Did you get any answer?—Yes. They said the matter was under consideration. He was unwilling to give up the ranch, and they would not deal with him, because they could not relieve congestion unless they got this. In my opinion this shows the absolute necessity of the Board acquiring compulsory powers to take over such ranches, otherwise the refusal of an individual to accept an equitable compensation will render efforts to relieve congestion in acknowledged congested districts futile. Relieving congestion is of essential necessity, and this can alone be satisfactorily and efficiently carried out by giving the Board compulsory powers, so that suitable grazing tracts could be taken over, and tenants from congested areas planted thereon. Much has been said as to the unwillingness of tenants even poorly situated to submit to this migratory scheme, but this unwillingness, I think, arises from a fear that from some circumstance, such as a greater depreciation of value of land, and keener competition under new conditions, they would run the risk of contracting obligations they would not be able to discharge. Besides, they feel it would be necessary to undergo a fairly large initial expense in fitting up a new home; but this difficulty could be overcome by making provision for granting a sum necessary in such cases, and I have no doubt of their willingness to enter into any such arrangement, should provision be made for the welfare of their new take. I know parts of the country where tenants were asked by the Board to remove, and they refused on the grounds that they had not the necessary means to provide stock, etc., to make the new farm pay, and they were afraid that in the course of a year or two they would lose the new take altogether. Some of the tenants on the estate during summer and autumn suffer much from want of water, so that provision in this respect would prove a boon. On the adjoining estate (Cooper's) a number of small uneconomic holdings at present exist, and this state of affairs was brought about by the arbitrary action of the landlord some forty years ago, he having evicted the then holders, and put in their stead "planters," and even after they had been removed land which they reclaimed was subsequently given over to those who were planted in their place. Congestion, of course, prevails here.

30959. That, again, is the general opinion we have heard through our sittings as to the absolute necessity of the Congested Districts Board or some other Government authority obtaining compulsory powers to acquire untenanted land for the purpose of improving the holdings of small holders—that is what you wish to put before us?—Yes.

30960. That is what we have had put before us by a great many witnesses?—My parish is greatly congested—it is mostly reclaimed boglands.

30961. It is scheduled at present?—It is.

The Commission adjourned.

SIXTY-SIXTH PUBLIC SITTING.

MONDAY, APRIL 22ND, 1907.

AT 11 O'CLOCK, A.M.

In the Courthouse, Manorhamilton, County Leitrim.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Rev. PATRICK M'LOUGHLIN examined.

Apr. 22, 1907.

Rev. Patrick M'Loughlin.

30962. CHAIRMAN.—Would you kindly mention any points that you wish to bring before us?—I represent the Kinlough Rural District Council, and the Bishop of Kilmore. I would first make some observations as to the operations of the Congested Districts Board which, we believe, have been very limited in this county. The total amount of the funds which it has expended in the county shows the correctness of this belief. I think the fact that its operations in Leitrim have been so limited is partly due to the want of representation of the county on the Board. The Board threw too much of the work upon the people of the country. They left the initiation of works in the country too much to a simple people who were unable to think out the works that should be initiated.

30963. Sir FRANCIS MOWATT.—When you say you left it to the people to initiate, you mean they should not have waited for the country to apply to them to begin operations, but should have done it themselves of their own initiative?—Not precisely that, but they did not give sufficient assistance to the people in discovering the things that would assist them—then when the people, or their representatives, put before the Board schemes, the Board always found a reason why they would not accept the particular scheme presented by the people. I would consider when that state of things operated, the Board should have assisted the people to a reasonable and beneficial scheme. The reasons alleged by the Board generally were either that they had no funds for these particular purposes, or that their powers and funds were confined by the laws and rules which they had to obey, from which I would conclude since they have been unable to do anything, that their powers and funds should be increased. I think that another reason for the limited operations of the Board in the county is the fact that the county has no representative on the Board. I admit that some members of the Board have been most kindly disposed to the county, but I conceive that every man will take care of his own child best, and although members may have, I am sure, displayed a considerable interest in the county, I don't believe that they will have that enthusiasm, that intensity of interest in the county which a representative should have to enable him to work the different projects proposed by the people.

30964. CHAIRMAN.—I suppose you are aware that at present there are no such things as local representatives on the Board as such. There are people, of course, who live in particular districts, and who know those districts, but they are not appointed to the Board as representatives of any particular district—you are aware of that?—Yes, I admit that, but I would say that theoretically that is very good; but as long as human nature is in it, I prefer having a representative.

30965. That means to say you would like to see the construction of the Board changed in such a way that each district would have a representative?—At least each county.

30966. You would like to see an actual representative from each county in which there are scheduled areas on the Board as a representative of that county—is that so?—I would.

30967. How would you propose that those representatives should be appointed—elected or nominated—would they be elected representatives?—That is a question that I did not consider, but I think in the present condition of the world that elected representatives of some sort would be generally what men would look to, at least, if I am to speak as a popular representative, I would not deny the right of nomination. I believe it is a most necessary thing, but I think, generally speaking, for a position of the kind that an elected representative is the best.

30968. If he was elected, have you thought at all by whom he would be elected?—He might be elected in various ways, by representative bodies. I would not think that he should be elected by individual voters such as members of Parliament, but I would find some way of electing them.

30969. Anyway you would like to see elected representatives from each congested district county on the Board?—Yes, in some way.

30970. Do you think that it would be ever possible to grant to the Board a sufficient sum of money to meet the requirements of all the congested district counties at once?—I do not think it would. I think that these things should be done gradually. The work has to be built up from the foundation. You are concerned in a work in which several interests are involved. You are dealing with a body that has several arrears, and I don't see that you are going to establish things rightly all at once.

30971. You agree, however, that when the powers and income of the Board were increased, some places would have to be dealt with before others?—Even if that were so, the Board, having been twenty years in operation, may have dealt sufficiently in some places, and I think our time should now come.

30972. I am not talking about the past. I am talking of what might happen in the future. Even if you had representatives from each county, I gather from you that you are of opinion that, even so, some places would have to be dealt with before others?—I don't precisely mean that. As I understood it, the question you put me was whether the Board should receive, say, some few millions of money at once, and powers to deal with the questions that have been embarrassing them for a great number of years. My answer would not be precisely that way. What I would say would be this, that a great deal of good in each county could be done by taking the work piecemeal. For instance, I may have something to say by-and-by about the lands, and I may take a view opposed to the grazing system.

30973. Suppose the Board had at their disposal a given sum of money—it does not matter whether it is large or small—suppose it was considerable. Suppose there were things that they ought to spend their money on in County Galway, and there were other things in the County Kerry which did not seem so pressing as the things to be dealt with in the County Galway, would you suggest that there should be an arrangement by which part of the sum which they thought ought really to go to the County Galway

Apr. 22, 1907.

Rev. Patrick M'Loughlin.

should be diverted and spent upon the County Kerry upon matters which were not so important as those pressing for solution in the County Galway?—I don't think any reasonable person should consider that money ought to be spent on things that are considered practically unnecessary.

30974. I don't say unnecessary, but this is a pressing thing, more so than the other. Would you deal with the pressing things first wherever you found them?—I would to a certain extent.

30975. To what extent?—The pressure may be relative.

30976. What do you mean by pressure?—If a county is pressed, we may give it some relief without absolutely depriving another county, say Kerry, of what is requires. If the Board had greater powers and funds it might do a great deal of good in the several counties which are congested without doing all that the several counties required.

30977. My point is this. Has it not struck you that perhaps a system such as you advocate, namely, the adoption of two representatives from each county would have the effect of dividing the funds in the Board's possession amongst the various counties I do not say in equal proportions, but still, making a division to meet the pressure put upon the Board by those representatives, and thereby depriving a particular county where a great deal of immediate work was needed of the benefit of those funds?—I cannot conceive that the Board would allow any individual to rule it in such a fashion as that he could claim for his county a portion of the funds which it was not entitled to.

30978. But wouldn't he think he was entitled to it?—If he was entitled to it, then I think he should get it.

30979. If he was a representative, and the funds were common to all the congested counties, wouldn't he think he was entitled to portion of those funds, and wouldn't his constituents think they were entitled to portion of these funds whether they were or not—it would be impossible for those constituents to measure their need with the need and conditions of other counties, of which they did not know. They would look at their own necessities from a purely local point of view?—Quite so.

30980. They would, therefore, think that they should be entitled to have a certain share of the funds devoted to remedial work in their county, and would not that lead to a division of the funds such as I have suggested, and consequently the deprivation of money from a county in which every penny was urgently needed?—But that is a hypothetical case.

30981. I am only putting it to you whether it has ever struck you that that might be the result of the system you advocate?—I do not believe that as things exist that is a question that I should have considered. As things exist, I do not think the hypothesis is one I should consider.

30982. Sir Francis Mowatt.—You do not think each representative would try and get as much as he could for his county?—Of course he would, because on the hypothesis that I am to suppose a county which does not require assistance——

Sir Francis Mowatt.—Oh, no, I do not say that money would be spent where it was not necessary.

30984. Sir John Colomb.—Have you ever been in West Connemara, Mayo, or the Rosses in Donegal. Have you ever been in any of those districts I have named, and seen their condition as compared with your own county?—I scarcely have ever been out of where I am.

30985. Chairman.—As regards the second point, you say that the Board have failed?—I did not say failed, I avoided that word. What I said was that their operations, as judged by the expenditure of funds, have evidently been very limited, because they have left the initiation of work too much to the people.

30986. I do not quite follow what you meant by your answer to Sir Francis Mowatt. Would you mind developing your point a little further. Can you give us some concrete instance?—Well, in the first instance, with the exception of one or two members of the Board who took a very kindly interest in the county, we received no assistance. It is necessary that where there is a Board with officials and the correspondence and all that, you have to look to it to initiate works in a county or schemes to deal with problems. The peasantry cannot do that, and neither can practically a good many connected with them. Then when they come to inquire about these matters from the Board they are met by a number of objections and they get no assistance that I know of, and then, as I say, owing to the want of funds or the want of powers, whatever suggestions were made by the people or their representatives the Secretary of the Board was forced to tell them that they could not do such things. The people or their representatives could not find out other things to benefit them, and so practically everything fell through.

30987. Tell us what sort of things these were?—For instance, in the improvement of cattle.

30988. What year are you speaking of now?—I speak of all the years generally until the cattle scheme practically ceased as far as the Congested Districts Board are concerned in this county.

30989. You know that the Congested Districts Board do not do that work now?—I am aware of that.

30990. You are speaking of the time before that work was removed from them?—From the want of funds and powers the Board was forced to form a scheme, and the result of the scheme was that the farmers who took the leading animals were robbed by them.

30991. Robbed by whom?—By the animals they received until they had to give them up.

30992. Were they robbed?—Well, that may be a strong word. What happened was this. The price that the farmers had to pay and the system of keep they were forced to adopt and the sum that they received for the animals when obliged to dispose of them left the farmer in such a condition that he was a loser, and all for the sake of assisting his neighbours. The result was that they gave up these things.

30993. The cattle scheme issued by the Board was not satisfactory to the county or the farmers. Is that it?—As far as the Board's idea was concerned it was accurate enough, but when it came to work out it was found that the farmers who took these animals were unable to repay themselves, and so they gave the animals up, and as a consequence the scheme fell through.

30994. But then why was the Board's idea right. Where was the breakdown. To whom was it due?—The breakdown was in the financial system of the Board.

30995. Whose fault was it that the scheme did break down—the Board's or the farmers'?—The Board's.

30996. Then if it was the fault of the Board why do you say the Board's idea was right?—Because the Board's idea was right in their promotion of better cattle and consequent benefits to the people.

30997. You mean their aim was right, but their methods were wrong?—Their financial methods failed.

30998. Mr. Sutherland.—Is this the sum total: that they gave too little money?—Well, they gave an animal to the farmer that was suitable enough, and sometimes not suitable, because they would not pay sufficient attention to the farmer's ideas. For instance, this is a glen country, and you might put a class of cattle on that side of the mountain that would thrive admirably, and the same class of cattle on the lowlands would be of no use to the farmer.

30999. That is a different thing to what you were saying?—I am only making that remark.

31000. Chairman.—According to you the cattle scheme of the Board was unsatisfactory. First, because the financial arrangements were not liberal enough; secondly, because sufficient knowledge was not brought to bear upon the class of bulls that were placed here taking into consideration the varying lands on which these cattle were placed?—Yes, you might send to the county generally a class of cattle suitable to the county, but if you do not put them upon the lands and in the localities for which they are best adapted you spoil instead of improving.

31001. Of course that is all ancient history?—Oh, yes, it is ancient history.

31002. The Board no longer do these things for any congested county The Agricultural Department has taken over the whole of that work?—Yes. I selected this as indicating one of the principles on which they were forced to proceed.

31003. But you would not bring that charge against the Board now, would you?—The thing is out of

existence. Only the Department has changed a bit I would bring it against them.

31004. That is another matter, and does not concern us. You would not be disposed to-day to say that the Board had been backward in giving help to this district?—No; all I would say is that what happened in that case, as a general rule, happened every other project that was brought before the Board.

31005. Very well, now will you tell us another project. Tell us something that applies to the Board to-day?—Well, take the condition of the land, the congestion connected with it, the emigration that is going on.

31006. Sir FRANCIS MOWATT.—Emigration or migration?—Emigration—these were all matters for the Board to deal with. There is a large quantity of untenanted land in this county, though it would not be so great as in other counties in the midlands, but in my opinion a quantity of waste land, or what is practically little better than waste land, might be greatly improved if it was drained.

31007. Then you think the Board ought to do more here as regards drainage?—Yes, I think it ought.

31008. Do you know if that has been brought by the county before the Congested Districts Board, or are you suggesting that the Congested Districts Board should have sent down here and inspected the county and found that out for themselves?—No. The Congested Districts Board did take that question into consideration in the county.

31009. CHAIRMAN.—Did any communications or conversations pass between the local people and the Board on that subject?—Yes. Numbers of communications passed between the public bodies of the county, and clergymen, members of Parliament, and other representatives.

31010. All directed to the Board?—Yes, indicating particular schemes, and the replies all depended upon the very same difficulty, the want of powers and the want of money, knocked all these schemes on the head. Individual schemes were placed before the Board, and officers of the Board visited the localities sought to be benefited. There were engineers who estimated the cost of the schemes and who pointed out the number of acres of land that would have to be reclaimed. When speaking on that point I may say that I think and believe that if all the land in North Leitrim with which I am acquainted, by attention in the matter of drainage, was brought back to the condition in which it was thirty years ago—I know it wants more culture and more lime—you would have a different state of things. Dealing especially with the main rivers, because they act as it were as main drains——

31011. What do you mean by bringing the land back to the state in which it was thirty years ago?—Because the land has deteriorated since then.

31012. So far as water is concerned?—In every way. All the old drains are closed up, and the rivers are stopped and closed up, and there has been no lime, for instance, put upon this part of the country for over thirty years.

31013. Do you think there are more lands flooded now than there were thirty years ago?—Yes. There are half-acres of stones on the best land that is in Leitrim. There are mouths of bridges choked, and the floods turned out on the land.

31014. Sir FRANCIS MOWATT.—That was not so thirty years ago?—No, sir, it was not.

31015. Sir JOHN COLOMB.—That is a very remarkable statement of yours. You have, I understand, spent your ecclesiastical life in this county. You remember it from your early days, and when you speak of what was done thirty years ago and what is done now as regards lime, are you speaking of a matter within your own personal knowledge?—Yes. I am not very old, but I am over thirty years of age.

31016. You said that for the last thirty years no lime was put on the land, and the land has been going back. Is that right?—Yes.

31017. Now, it is twenty-seven years since the passing of the Land Act of 1881. Is it the case that, comparing the time before the Act of 1881, and since the Act of 1881, that the habit of putting lime and attending and keeping the land in heart has ceased?—Yes.

31018. Do I gather your evidence correctly that it is your experience that the land has been going back for about the last thirty years for want of attention?—Well, you are putting in the word attention.

31019. Well, I will take it out, and make it simply a question of putting on lime?—What I say is that owing to various circumstances the land has deteriorated. If lime is necessary for the country generally, you must suppose first the possibility of getting the lime, and in the second place that there is plenty of labour to put it on. For instance, about the time I speak of there was a large population in the country, and the people used two kinds of manure in this part of the world, lime, and what is known as blue sand, or gravel, and the people were engaged in the manuring of the land from this blue gravel in a way that human beings should not be engaged, but by this system they had the land in a state of cultivation which was very different from what it is to-day. I saw myself, for instance, when I was a boy, seven or eight, or even fifteen ricks of oats at the people's houses, and you would not get as much as that in the whole parish now.

31020. Leaving out the blue gravel, and taking the lime, you properly said that it involved the questions of getting the lime and the labour. Was it more easy to get lime thirty years ago than now? Has anything happened during the last thirty years to make it more difficult to get lime now than then?—Well, thirty years ago it was easy to get any quantity of corn in this place.

31021. But I am speaking of lime?—I know that. Thirty years ago it was easy to get any quantity of corn, but for various reasons since then you can get no corn now. In the same way with the lime. The lime has disappeared.

31022. Then is the limestone exhausted?—It is not, but fuel is exhausted—the means to burn the lime is exhausted.

31023. The turf?—Yes.

31024. Then do you attribute the falling off in the supply of lime to the fact of the diminution of the turf available for burning?—I do as one of the reasons.

31025. In this part of the country are the turf bogs worn out, and is there now a difficulty in getting fuel?—In a great number of cases you could get no fuel unless you went to the mountains.

31026. Then, is the Commission to take your answer that the reason the lime is not used and put upon the fields now is that the turf is gone which was formerly burned to produce the lime?—Partially so. If you go into any parish in North Leitrim, to put the case practically, I will ask you to find the farmer who is in such circumstances to-day that he could build a lime kiln and get limestone to burn in it, and find the fuel. In fact whatever lime kilns there are in the county, and there are only two or three, they are always fed by the remains of coal, turf is not used in them. It is quite a mistake to suppose that even in this county there is bog in any large quantity. A great number of people have six or eight miles to go for turf. How is a small farmer with a few cows to build and feed a lime kiln and bring turf seven or eight miles to it, whereas in the years I speak of the farmer had turf near his door.

31027. But you must remember that there were several lime kilns burning lime which the farmers bought. Isn't that so?—A great many more than we have now at all events.

31028. These lime kilns have now ceased to burn lime, and is it because all the turf near the lime kilns has been cut out, and so though the lime kilns are there they are of no use because the turf near them is all cut out?—That is one of the reasons.

31029. Mr. SUTHERLAND.—Prior to 1881 did the landlord supply the lime?—I never knew the landlord to supply anything in this place except the processes.

31030. Were the lime kilns on a man's holding always worked by the tenant in the old days?—What they generally did was this. The farmer set up the lime kiln and he had the turf on his own farm probably. In some places he might have five or six miles to go for the limestone, and in other places he might have it beside him. Sometimes he had to open a pit, and dig for it, and remove the clay six or ten feet, or more before he got to the limestone. That is a thing impossible now because of the paucity of labour.

31031. Then you consider the chief cause of the cessation of lime burning, is the diminution in the amount of labour now available, and therefore an increase in the price of labour?—If you ask me for the chief cause I say it is the poverty of the individual

Apr. 22, 1907.

Rev. Patrick M'Loughlin.

tenant and his inability to get together the several elements that are necessary for the production of lime.

31032. CHAIRMAN.—How did he do it in the old days?—In the old days everything was cheaper and everything was nearer at hand.

31033. Did they burn turf in the lime kilns in the old days?—Yes.

31034. And at present coal is burned merely because the turf is too far off—is that so?—The turf is too far off and too scarce. Those who have lime kilns might, of course, use a little turf at times.

31035. You told us that coal is now used?—Wherever I have seen lime kilns I have seen coal used.

31036. That is because the turf is too far away from the lime kilns. Is that your opinion?—Yes, too far away, and too scarce.

31037. And in the old days the people burned turf and not coal in the kilns?—Yes, twenty or thirty years' cutting will do a great deal with the bogs.

31038. Do you think the farmers were better off thirty years ago than now—were they richer then than now?—Well, I believe there were more fortunes for girls, and more money in one parish thirty years ago than in ten now.

31039. Mr. KAVANAGH.—I suppose artificial manure has taken the place of lime in this part of the country as in most other parts?—Artificial manure is used to a very limited extent in this place. Farmers use 2 cwt. or 4 cwt. for potatoes, and perhaps a few cwt. for a piece of meadow.

31040. But hasn't artificial manure rather taken the place of lime burning because it is cheaper in the long run to use it than to burn lime?—Well, I believe basic slag is.

31041. Because it is cheaper?—No, I cannot say because it is cheaper.

31042. Then why is it used—you would not suggest it is better than lime, would you?—Well, if it be true that basic slag has the element of lime in it to such an extent as is stated, together with other elements, it should be better than lime.

31043. Sir JOHN COLOMB.—You stated that thirty years ago if a person went into a farmer's stackyard he would see a large quantity of oats there, and that now he would not see that. Do you attribute the falling off in the production of corn to the deterioration of the land, or to what cause do you attribute it?—I attribute it principally to the condition of trade.

31044. Do you mean the price now paid for oats?—Sometimes to the price.

31045. But isn't it the case that the official returns show that the price of oats has rather risen than fallen?—The price of oats in this county has risen this year to £1 a sack. In each county there are different names for the quantity of oats sold, and when we speak of a sack of oats in this county we mean twenty-four stone.

31046. Most Rev. Dr. O'DONNELL.—I am sorry I was not able to reach here at the time your examination was begun by our Chairman. I recollect well that when Father O'Hara and myself visited North Leitrim some years ago you did your utmost to let us know the condition and requirements of the county in its northern parts, at all events?—Well, I did not wish to refer to that, my lord, except to say that the county always felt the peculiarly kindly interest of some members of the Board.

31047. The reason I refer to it is this. I am anxious to ascertain what happened to the projects we then talked over. How many years ago is it?—About six or seven.

31048. Do you recollect our talking over many projects for North Leitrim?—Yes.

31049. Have these projects matured or failed to come into existence?—They have all failed.

31051. You stated in answer to Lord Dudley that you would expect a body like the Congested Districts Board to take the initiative in a county like this?—Yes, to take partially the initiative.

31052. Do you refer to pretty large schemes for developing the resources of the county, or do you refer to commonplace and small schemes?—Well, to both, except in the case of very commonplace schemes. I would not expect that a Board like the Congested Districts Board should be brought into the minutiæ of things.

31053. You think the mineral wealth of the country should be explored by a body like the Congested Districts Board?—Yes, I think so.

31054. Schemes for drainage are much required in a place like this?—Yes, I think so. The Board should have charge of such schemes, because the Board alone knows its powers, and it has engineers at its command to advise it, while the rest of us are only amateurs.

31055. I think you said in answer to one of the Commissioners that Leitrim requires both arterial drainage and field drainage. Is that so?—Yes.

31056. You think both kinds of drainage ought to be promoted and encouraged?—I think so.

31057. Do you recollect whether the Congested Districts Board, after the visit of certain Commissioners, did propose to give a contribution to certain drainage works in the county?—Yes.

31058. And they informed the applicants that it would be necessary to form a Drainage Board?—Yes.

31059. They offered a contribution to the County Council if the County Council would do the drainage?—That is quite so.

31060. Therefore, at all events, it is true that the Congested Districts Board went so far to encourage drainage that they offered in certain cases a contribution to the County Council or to Drainage Boards, if they were formed?—Yes.

31061. But it was considered that the difficulties in the way of carrying out these schemes were insurmountable?—Yes, insurmountable. That is precisely the point I have been at from the beginning about the powers of the Board. There were such difficulties that we could not surmount them. Take, for instance, the question of a Drainage Board. The formation of a Drainage Board is a very expensive thing and involves a multiplicity of difficulties, and the result is that the humble parish priest minding his own business and the unsophisticated people cannot approach such a problem as that.

31062. Not only that, but isn't it very difficult for even a County Council to carry out drainage works?—Yes; and another thing I would say is, that the condition of the Board to contribute to a County Council involves the rates of the people and taxation, and that is a condition which they uncharitably say the Board know very well will knock the scheme on the head.

31063. Please explain that further?—What I mean to say is that the taxes in the county are already very high, and when the Congested Districts Board offers as it did in the case of the Largeydonnel River, £100 for the drainage of that river, it attaches two conditions. One is that the people should form a Drainage Board in a simple rural parish, and the other is that they will give the £100 provided the County Council give £200 towards the scheme. We all say that the Congested Districts Board know perfectly well that the County Council will not do that.

31064. Mr. SUTHERLAND.—But why should the County Council not contribute?—Because the people are overtaxed already.

31065. And the short and the long of it is that you want the work carried out altogether at the expense of the Congested Districts Board?—I would not say that. But I do say that whatever the Congested Districts Board intends to give for any particular scheme, great or small, it should give it on its own account, and have the power to carry out the work.

31066. But don't you think it a very desirable thing on the part of the Congested Districts Board to enlist public feeling and ascertain the *bona fides* of the persons making the proposal by the willingness of the County Council to contribute towards the cost?—I do not think public feeling or sympathy will ever be secured for any Board by imposing additional taxation.

31067. Most Rev. Dr. O'DONNELL.—Your point in the second place is that the contribution promised by the Congested Districts Board was not sufficient proportionately to that asked from the County Council?—It was not sufficient, and the condition was such as to cause any project of the kind on behalf of the Board to be a failure. The condition of getting a subscription from the rates will kill a scheme in this part of the country.

31068. At the period to which I have referred, when you went with some members of the Board into these things, do you recollect if there were large contributions offered for the making of certain roads in the district by the Congested Districts Board?—Yes, but

those contributions were also conditional on the rates of the people.

31069. No doubt, but isn't it a fact that when the contributions were offered it was ascertained in the locality that if such contributions were given very probably the local authority would provide the rest of the money necessary to carry out the work?—Yes, it was thought the local authority would provide the money.

31070. Of course, there could be a mistake about that, but don't you think that the Commissioners going around and suggesting certain contributions from the Congested Districts Board would be likely to ascertain whether, in the opinion of those who know the ways of the County or Rural District Councils, the balance of the money was likely to be provided by them?—Yes, I would think your lordship would find out something about that.

31071. Sir JOHN COLOMB.—Were the contributions voluntary contributions from the people living about?

Most Rev. Dr. O'DONNELL.—No. When the officials or members of the Congested Districts Board go through the scheduled area those who are rightly interested in doing something for that area bring under their notice certain projects. Then the question will at once crop up how much is the local authority likely to give of the total cost.

CHAIRMAN.—Then there were only the two contributors, the Congested Districts Board and the local rates.

31073. Most Rev. Dr. O'DONNELL.—Practically only the two. Very likely both parties considered that the work would go on, but it is quite possible that when the County or District Council met they thought that considering their taxation the amount demanded from them was excessive?—Yes, that is so.

31075. That must have happened?—Yes.

31076. Because I find that there is a sum of £2,000 offered by the Congested Districts Board for roads and drains on condition of certain contributions, and that money has not been taken up?—That is a fact I was not aware of.

31077. You gave the explanation that the balance required from the local authority was in their judgment too much; more than they could make up?—Yes.

31078. Taxation for the existing works in the county is very high?—Yes, and there is another thing. The County Council in dealing with roads consider two classes, roads already formed and new roads. The Council will take up the road already formed much more easily than they will a new road. The reason is that in the case of a new road the Congested Districts Board say to the County Council, make this road at a cost of, say, £1,500, and we will give you so much. But the County Council has to examine how many families this road will accommodate, and they will perhaps find not very many, although the district on account of its remoteness may demand it. Then again the Congested Districts Board in promoting drainage works or road-making practically say they will give a certain amount and will then have no more to do with the works and leave all the further responsibility on the local authority. The local authority is not willing to take this responsibility, especially of putting forward the scheme and running the risk of legal claims. They believe the Congested Districts Board should have the power to deal with all this and save them from this responsibility. Then when the work is carried out the Congested Districts Board look to the local authority to maintain it.

31079. CHAIRMAN.—Is that what passes at the meetings of the County or Rural District Councils when these matters are being considered?—When the project comes before the Council they debate it in the usual way, and that is what they generally say.

31080. Do I understand you to say that the Congested Districts Board say to the County Council, we will give you so much money in aid if you undertake to carry out the work?—Yes, and sometimes in the case of drainage they require the County Council to appoint a local Drainage Board.

31081. Are you of opinion that the County Council even if they had the money are not fitted to initiate works of that kind and carry them through?—I think that I should not give any evidence in reference to the County Council or its work, as there are representatives of that body here to give evidence.

31082. But you are an unprejudiced outsider, and much more likely to give us unprejudiced information than a member of the body we are inquiring about?—I am a most unwilling witness. I would not be here at all only I am commanded to attend.

31083. I only want your view as to how the matter should be carried out. Do you think the Congested Districts Board should provide the money and do the whole thing themselves or throw some of the expense of carrying out the work on the local authority?—I think the Board should have sufficient power to execute their own works, be they great or small, and sufficient funds for this purpose. Apart from everyone else they should have absolute powers as beneficiaries of the community.

31084. Does it amount to this, that you would rather see works such as drainage, road-making, and road improvement initiated, carried out, and paid for by the Congested Districts Board apart altogether from the local authorities?—In the question of roads especially, where there would be large projects, I say the County Council should have a look in, but where there would be small works involving an expenditure of only £30 or £40 or £50 or £100, I say the Board should have absolute power and ample funds to carry them out.

31085. What is there to cause the difference between large and small works. Why do you think there should be a difference?—The large work will involve an expenditure of £1,500 or £2,000 on a long road of 2,500 perches or so.

31086. But apart from the money question altogether, why do you think there should be a difference in the system adopted in the two cases?—Well, I will give you one reason. Where, for instance, there are old roads in existence, the rights in reference to them have been already determined. Where you have short cuts to bogs, they are not put in as rateable property—as works that the County Council is responsible to maintain and keep up.

31087. Does the District Council not look after these roads?—No local authority generally looks after these bog roads. The people have to keep them up themselves. If they get a small contribution from the Congested Districts Board for a bog road the people make that road and are done with it. I think that is a good system.

31088. In that case the people would initiate and carry through the scheme and not the Board. Who is to make the bog road—the Board or the people?—Well, there are, for instance, six or seven persons going to a bog, and they have a common roadway. These people will gather together some day and say the road is in a bad way, and requires foundations and repairs. They are not able to do this work themselves sufficiently well, and the Board gives a contribution of, say, £20 or £30. The road is then made and the County Council should have nothing to say to that as they are not responsible for further repairs. On the other hand, if you have a large project involving £2,000 for a long road, you cannot get rid of the District Council because they have of necessity to take over that road and keep it in repair afterwards. In a large scheme of that kind you cannot do without the County or District Council.

31089. Mr. SUTHERLAND.—And who do you think ought to keep up the road?—The County Council should keep it up, of course, but the Congested Districts Board gets off with the best of the bargain.

31090. What bargain? What return does the Congested Districts Board get?—I do not believe the Board should get any return.

31091. Do you maintain that the Congested Districts Board should first of all make the road and subsequently maintain it?—No.

31092. How far then ought they to go?—I am afraid we have gone a bit off from the question.

31093. I think you said that in the case of the roads to the bogs you did not want the District Council to have anything to do with them?—Yes, I say that.

31094. Mr. SUTHERLAND.—These are roads made at the expense of the Congested Districts Board and the people, and the people for whom they are made should guarantee the upkeep of them in the future. That is a most essential condition?—Yes.

Most Rev. Dr. O'DONNELL.—Perhaps Father M'Loughlin will answer that by saying that the people in the district will keep up such roads.

31096. Mr. SUTHERLAND.—But these people pay road rates?—They do for other roads.

Apr. 22, 1907.

Rev. Patrick M'Loughlin.

31097. Then they pay both for all the other roads and for the maintenance of their own roads?—They maintain the bog roads.

31098. Is there any other class in the community that does that?—I am not aware of it.

31099. CHAIRMAN.—With regard to the small roads, you think the Congested Districts Board should make the contribution and allow the people themselves to make the road, and then, having done that, throw upon the people the duty of maintaining the road?—Yes.

31100. That would be apart altogether from any reference to the local authority, but in the case of the large roads for which the County Council would undertake the upkeep after they are made, you think there should be direct communication between the Congested Districts Board and the County Council before the work is done. Would you suggest whether the County Council or the Board should do the work?—The County Council should carry out the work and keep it in hand.

31101. Sir JOHN COLOMB.—The Board should pay a sum of money to the County Council and the County Council should carry out the work through their engineer?—Yes. What I maintain is, that for the Congested Districts Board to pay one-third of the money and ask the County Council to pay the remaining two-thirds and also be responsible for the further up-keep of the road is a heavy responsibility on the shoulders of the County Council. I think the Board gets off too handy.

CHAIRMAN.—That is a question of finance. I was asking you about details of the method you suggest.

31103. Most Rev. Dr. O'DONNELL.—I think you have already said that there were no large grazing tracts in the county, or not many that could be acquired for the purpose of new holdings?—Well, there is a good deal of evicted land in the county.

31104. Is that land in the hands of the owners or of large tenants. I do not want the details?—Well, about equally in the hands of large tenants and the landlords. I do not wish to make reference to these grazing farms or evicted tenants outside my own parish, but if you wish to examine me on my own parish, which is typical of several parishes, I could give you an idea.

31105. It will be very interesting if you tell us of the condition of things in your own parish?—Well, before we leave the question of drainage, I wish to say that I am informed that the quantity of land and bog that could be reclaimed from the Largeydonnel River by the expenditure of £300 there would be several hundred acres. I regard that in the same light as places made out of ranches. I consider if this place were reclaimed and dried up it would be just the same as the purchase of ranches.

31106. And a much easier way of bringing great improvement to many occupiers?—Yes, my parish is a glen, and when the floods come they dash down in the usual way carrying all before them. One river runs through the parish in one part, and another in another part. Both rivers are stopped up by a few rocks and they have flooded hundreds and hundreds of acres of land. The crops are torn away in the harvest time, and what happens in my parish happens in practically all the parishes, because they are of the same geographical formation.

31107. Sir FRANCIS MOWATT.—You say the rivers are stopped by a few rocks. Do you mean rocks brought down by the flood or rocks which have always been lying there?—Rocks which have always been there. The rocks are there, and the flood being once stopped, it does whatever it wishes afterwards.

31108. Most Rev. Dr. O'DONNELL.—You consider that the example you have given is a good one. The river is in great need of a large scheme of drainage?—Yes, I brought before your lordship the question of the Bonet River, for instance, and nothing has been done with it. It rises in my parish out of a little lake, and just as it starts out of the lake there is a bridge, and the eyes of the bridge are completely filled. Of course there is not a bit of use in opening the eyes of the bridge as long as the outlet is as it is. The flood will go back, and recently there was a very sad accident by the flood getting further up into the country and crossing a road. A man lost his horse and almost his own life.

31109. The Commissioners might be able to see that place—it is quite close?—Yes. It is not in my parish, but other witnesses can speak of it.

31110. Mr. SUTHERLAND.—But isn't it the duty of the County Council to keep their bridges clear?—I am not representing the County Council, and I would prefer not to answer any question in reference to the County Council.

31111. Most Rev. Dr. O'DONNELL.—Are you not impressed with this fact from all your experience in the county that a considerable sum of money is required from some source to improve the local facilities and provide for drainage on a large scale?—Yes, I think all the schemes put forward by the Congested Districts Board require greater powers to carry them out. In the place I refer to a great deal of land could be made by the edge of the lake. The river there is ruining the health of the people, because at night one can see a mist rising over the whole place on account of its water-logged condition. The people are sleeping in that mist, and it is as bad as their poverty, as everybody can feel the result of the damp. One of the Commissioners has referred to the price of corn in the district. On that point I would say that one of the members of Parliament put a question on the condition of the potatoes in this part of the country and received an answer that things were dear, and that everything was at a high price, and the price of corn was instanced. It is true to say that corn, which was only 15*s.* a sack a year or two ago, is now £1 a sack, but it might be £100 a sack for all the good it would do this part of the country, for we have no corn.

31112. The land has gone a great deal out of cultivation?—Yes.

31113. You were going to tell us something of grazing tracts in your own parish?—Yes. There is another grazing tract, a townland, on which I am led to understand there were fourteen tenants, and all were evicted with the exception of two. I understand that the Estates Commissioners have at present restored those tenants except in the case of a large farm, which has been recently sold. I do not know of any other, but in the other parts of the county, about which other gentlemen will speak, you will find plenty.

31114. I shall not ask you anything further about that. As regards the animals sent to the district by the Congested Districts Board, I myself have very little knowledge, but are you sure that the representations of the people in the locality were not attended to as to the exact kind of animal that suited a particular district?—I do not say that, my lord. What I said was that the aim of the Board was all right, but that when they came to locate the animals they sometimes failed.

31115. Is that as regards the individual farmer that was selected?—The locality. For instance, they required to be very careful about the district in which they placed a Polled Angus, and also they required to be very careful about the milking strain in the cattle. But what was objected to principally was the financial conditions under which a farmer received the cattle.

31116. You think the terms were not sufficiently liberal?—The result seemed to prove that, because the farmers gave them up as unable to keep them at what they were receiving.

31117. It would look from the returns as if a very considerable number of these cattle had been placed in Leitrim?—In the first years there was, but for the past years they were falling away badly. The Board changed their schemes a little through time, and gave some more facilities in the end.

31118. Now, about the industries that ought to be started, you favour the Board taking the initiative rather than the local people. Do you recollect any suggestion to the local people and yourself about parish committees?—Yes.

31119. Was that taken up?—Well, for the last three years the Parish Committees have been working in this place.

31120. So there have been some suggestions from the outside of projects for the benefit of the people?—Oh, yes, there have been.

31121. How are the Parish Committees working?—The Parish Committees are working admirably. They are doing, what I might say without exaggeration is, an extraordinary amount of good, and if the work they are now doing is continued for some years—the people

and the Committees working honestly together—I expect the Board will be gratified to find a very pleasing change in the situation.

31122. You think these Committees are improving according to their means the condition of the farmers?—Yes, but I would like to point out some extensions. The Parish Committee gets only, say, £70, and it is not easy to improve much with that sum where there are so many bad houses. There are small windows in the houses and these should be taken out and replaced by good windows to admit light and air. There should no longer be the old flagged bedroom floors, or concrete or clay floors.

31123. These are improvements that the Parish Committees intend to bring about?—Well, in my parish that is what they are trying to do; they board the bedroom floors, and do precisely what the Board requires.

31124. In your parish is it a prize scheme or a scheme of subsidy that is in existence?—A scheme of subsidy.

31125. With reference to the point of initiative what has happened to the little industry at Kiltyclogher. Has it gone on?—I cannot say; I am away from there now.

31126. Do you remember making a suggestion about a teacher?—Yes.

31127. Was that suggestion carried out?—It was.

31128. Was it a crochet or lace-making industry?—A crochet industry.

31129. Until you left that district was the class a success?—It was.

31130. Sir John Colomb.—You spoke of your Parish Committee receiving £70. I see there are twenty-one Parish Committees receiving between them £700 and £800 a year. Taking your parish, your grant from that sum was, I presume, £70?—Yes.

31131. Can you give the Commission an estimate, such as we have had from other sources, of the actual amount of work you get done by the people themselves in your parish for that £70. Do you get £150 worth done?—We get three times £70 worth of work done.

31132. And the work is still going on?—Well, the year is closed now.

31133. I understood you to recommend to the Commission that the Congested Districts Board should have absolute powers?—Yes, for carrying out all its works.

31134. Do you include in those absolute powers the power of levying a small rate upon a district they benefit for the maintenance of works done by the money of the Congested Districts Board?—I suppose they might do that.

31135. Another question I would like to ask you is this. You spoke, when contrasting the condition of things thirty years ago with the present, about the burden of rates. Now, I see by a return that in four out of the five electoral divisions that make up the union of Manorhamilton, that the poor rates had fallen in 1891 as compared with 1881—in those four divisions the rates were lower. If the poor rate has fallen is it in county cess that the rates have risen?—As I told the other gentlemen I do not wish to speak on the question of rates or on those matters that concern a County Council representative.

31136. Another question is with regard to drainage. You spoke of the hundreds of acres of land that might be improved by drainage, and said that would be equivalent to taking up a grass farm. In the areas you have described as being flooded by these rivers I suppose the people that suffer are all occupiers. It is all occupied land?—Yes, all occupied land.

31137. And if drainage works were carried out by the Board, and the water all taken away, I suppose that would enormously increase the value of every man's holding?—I do not think the holding would be enormously increased in value no matter what you did with it.

31138. If the holdings suffer so terribly as you have described by these floods, would not the removal of the flooding greatly improve the value of those holdings?—It would improve the value of the holdings. But if you take my parish for instance, the holdings are so small that the farmers will have only about three cows and a little patch of potatoes, and perhaps some of them will have a little oats. It will be very hard to make any increase to the value of those farms to any great extent; all you can do is to make the most of it.

31139. But obviously drainage would increase the productive power of the farms?—Of course I say that.

31140. Then would you not say it would be a perfectly fair and reasonable programme for the Congested Districts Board when they undertook and carried out the drainage work that they should put a small amount of tax upon those people who benefited for the purpose of maintenance. Would you not consider that a quite reasonable thing?—I think if the Board had sufficient power to carry out its scheme of drainage in a proper way, and once and for all, the cost of maintenance afterwards would be of such a trifling nature that either the Board might consider it unnecessary to impose any tax at all, or impose a merely nominal tax. Take the river I have been speaking of. What has to be done with it is that it must be opened to the sea, and if this main river is properly drained and properly opened there should be little or no cost of maintenance.

31141. Most Rev. Dr. O'Donnell.—Where does this river enter the sea?—At a place called Bunduff. There is a salmon fishery there, and an individual like a parish priest will not be willing to get mixed up with a fishery company. It is only a Board like the Congested Districts Board that can deal with such a question. I do not advocate the Board doing everything for the people. I do not believe it is the duty of the Board or the Government to do everything that the people require. But there are things that the Government must do. What it has done in England to build up that country's commerce they must do in Ireland; that is, they must protect them by laws, give them facilities and remove the things that have destroyed them. That is a short cut to it. Now, in reference to this river there are these two rocks and a fishery, and until these two rocks are removed we cannot get rid of the water. I believe that if these rocks are removed the river will keep itself clean afterwards.

31142. Sir Francis Mowatt.—Do the fishery people object to that?—No, I never heard that they objected to it, but we all know what fishery people are.

31143. Sir John Colomb.—You mean by the fishery people the Board of Conservators?—Well, the Board of Conservators are one Board and the men who use the fishery are entirely different.

31144. But isn't the Board of Conservators a Board constituted by Act of Parliament for the preservation of fish for the benefit of the public generally, so that the fish shall not become extinct?—Well, I am not well acquainted with the legal constitution of the Board of Conservators. All I know is I would be afraid to touch a fisherman least I would get booked.

31145. Sir Francis Mowatt.—You drew a distinction naturally enough between main and bog roads, and you said, with regard to the large roads, involving an expenditure of thousands of pounds, that you thought it right that whatever the Congested Districts Board did with reference to such roads that the County or District Councils should have a look in because they would subsequently have to maintain them?—Yes.

31146. I understood you to say you thought it was no part of the District Councils' business to subscribe to the construction of these roads; that these large roads should first of all be made by the Congested Districts Board and that the District Council should afterwards keep them up?—Oh, no; jointly make the road.

31147. Then you propose that the District Council should contribute?—That both should join and make the road.

31148. Then in the cases you mentioned what you mean is that the proportion of the cost of making such roads offered by the Congested Districts Board was not sufficient?—I think not, having regard to the expenses subsequently arising.

31149. Chairman.—Is there anything more you would like to say?—The only thing I would make reference to is the condition of the people. The work of the Parish Committees in the congested areas is confined to a valuation under £7, and I think, as the work develops, that valuation should be increased to at least £10.

31150. At present the Parish Committees are not allowed to do anything for people whose valuation is over £7?—That is so, and if the funds in this respect were increased and the Board take partially the initia-

Apr 22, 1907.

Rev. Patrick M'Laughlin.

tive in matters for the improvement of the condition of the people a great deal more could be done through the Parish Committees. For instance, they intend, in my parish, to ask the Board when the houses of the people are improved to give permission for the expenditure of one year's grant in planting alone.

31151. Most Rev. Dr. O'DONNELL.—Trees for sheltering belts and fruit trees? Well, sheltering belts and beauty spots. I am afraid fruit trees and bushes, with the exception of gooseberries and currants,, would not live in our part of the country. I am of opinion also that the present prices of the rents will be impossible for the tenants to pay in my district.

Rev. JOSEPH MEEHAN examined.

Rev. Joseph Meehan.

31152. CHAIRMAN.—You have already furnished a statement of your evidence*?—Yes.

31153. Will you please tell the Commission any points upon which you feel strongly?—There is a part of my evidence in which I refer to the neglect of this county by the Congested Districts Board, and I only gave the heads. From the Blue Books, the Reports of the Congested Districts Board, we are able to see how far County Leitrim has benefited. These reports are particularly well done, because they sum up the operations for all the years up-to-date, and then give what has been done for the year under consideration. I am taking the Fifteenth Report of the Board, which is the Report for last year, and turn to the Table of Expenditure, Appendix 5, page 47. The first point is administration costs. But I need not mind that because administration will, of course, be proportionate to the amount of trouble that is taken in a particular county. Then, there is technical instruction, and a good deal of the work going on for the last eight years in other counties is now disguised in that. But I come to the purchase of estates. You will see that the total amount spent on acquiring estates in congested districts is £557,847, and all that has been done in that direction in County Leitrim up to the present is the purchase of one estate at a place called Kilgariff, at a cost of £850.

31154. CHAIRMAN.—If the Commission will turn to page 27 of our Statistical Abstract† they will find the whole of the figures taken out so far as they relate to County Leitrim.

31155. Mr. O'KELLY.—It is given here as £1,205?—I cannot account for that because the Board's Report gives the amount as £850. I may say I know the estate very well. It was purchased in 1903. But perhaps the money spent in improvements is included in the larger figure?

31156. Sir JOHN COLOMB.—It is given as the amount of the purchase money?—Then it is for the compiler of the Report to reconcile the figures.

31157. Most Rev. Dr. O'DONNELL.—Do you say that estates in this county have been offered to the Board?—Yes, I do; estates and farms have been offered in the county. Take the parish I am attached to. We wrote to the Board asking them to buy a tenant-right farm in order that they might carry out the work of migration, and the Congested Districts Board refused.

31158. On what ground, do you know?—The ground they gave was that they were unable to buy tenant-right farms. I was not satisfied with the reason given because I see from the Reports of the Congested Districts Board that they actually did buy tenant-right farms elsewhere.

31159. In the particular case you refer to was it only the tenant-right that it was proposed to sell?—I have three cases in this parish, and in other parishes there would be a great many more. In one, Holmes' case, it was the tenant-right only. In another case in which they were asked to buy, it was a small estate in Lisnagowan, which contained three or four farms, and by purchasing it the Board could have done a great deal for the improvement of these farms, but it was not done. That place has been sold inside the past four or five years.

31160. Was it grass land?—Yes, good grass land and mountain ranches beside it, which could have been taken and added to the farms and so improve them.

31161. Were any of the holdings in rundale?—There are none in rundale that I am aware of in Co. Leitrim.

31162. CHAIRMAN.—What is your next point?—By one of the rules of the Congested Districts Board the Board can take up an estate alongside of, or anywhere in, a congested county. There was a splendid vacant farm which, consisting of about one hundred acres, could have been easily utilised for migration schemes. There was no tenant whatever on this farm, and it was immediately adjoining a congested district. The matter was put before the Board. They sent a circular and an acknowledgment, and stopped at that.

31163. Most Rev. Dr. O'DONNELL.—When was that?—Last year. I have the letters of the gentleman, Dr. Roden, here.

31164. CHAIRMAN.—Was this an untenanted farm; untenanted land?—Yes.

31165. Is it in that condition now?—It is.

31166. Where is it?—It is Dr. Roden's, in the district of Drumkeeran, Manorhamilton.

31167. Sir JOHN COLOMB.—With regard to the three cases in point which you are giving us, do I understand you that it was through you that the applications for purchase were put before the Congested Districts Board?—I suggested to the tenant farmer to write to the Congested Districts Board. He did so, and has the letters. That is Holmes' case. In the second case I wrote myself to the Board, and I have the reply.

31168. Is the second case that of the untenanted land?—No, it is not. It is the case where the Congested Districts Board were asked in the first instance to buy an estate with a view afterwards to benefiting the tenants living on it, as the Board are doing elsewhere.‡

31169. In the particular cases you are referring to did the owners or occupiers communicate with the Congested Districts Board themselves, or did they ask you to communicate on their behalf, or did you do it as an outside matter according to the wishes of your parish?—There were only two or three occupiers of the land, and they asked me to communicate with the Board, and I did so.

31170. Most Rev. Dr. O'DONNELL.—Did the owners communicate with the Board?—Not that I am aware of.

31171. Neither agent nor proprietor?—Not that I am aware of.

31172. Sir JOHN COLOMB.—Was any communication made to the owners by you on behalf of your flock, because obviously the Congested Districts Board has to deal with owners or occupiers?—There was not, because it did not occur to me it would be necessary, as I pointed out to the Board that the land was being sold in Court, and they could, of course, see to it there.

31173. You were aware that there were transactions going on for the sale of the land in the Estates Commissioners' Court?—I presume it was under the Estates Commissioners. There were negotiations for sale between some parties.

31174. Most Rev. Dr. O'DONNELL.—Did you make any representation to the owner that it would be well to sell to the Congested Districts Board?—No, I did not.

31175. Are you aware that the Congested Districts Board has not considered it advisable to take the initiative in approaching the owner?—I have not seen that in any of their Reports. These Reports are the sole means by which we came to know of the Board's schemes.

31176. You were dealing with the third estate, and told us it contained one hundred acres of land. That seems to be an interesting case?—Yes, that is Dr. Roden's estate. It is just lying along the congested district of Killarga. It contains at least a hundred acres of very good land, and in my opinion it would have been suitable for the migration of tenants from the adjoining district.

31177. Who brought that case under the notice of the Board?—Dr. Roden himself on my suggestion.

31178. You have that correspondence?—Yes, and

* See page 251.

† See page 347.

‡ *Note by witness.*—The failure of the Congested Districts Board to do anything in this case is mainly my own fault, as the plan of reclaiming mountain tracks had not then occurred to me.—J.M.

also a reply of Dr. Roden's written during the last week, when I asked for particulars of this.

31179. Most Rev. Dr. O'DONNELL.—I remarked that the Congested Districts Board does not take the initiative in inviting owners to sell, but it frequently does in an informal way when they have been aided by others. Without someone coming into contact with the owner the Board would scarcely consider it politic to approach him. But an officer of the Board, for instance, has frequently brought the fact of a particular estate being for sale under their notice, and the owner has been approached, and the sale carried through.

31180. Mr. KAVANAGH.—Don't you think the Congested Districts Board would be placed at a disadvantage by offering to purchase from the owner his estate?—I quite understand that, but I say however it has happened it is a pity that while a great deal has been done in other districts, practically nothing has been done for Leitrim, in the purchase of estates.

31181. Most Rev. Dr. O'DONNELL.—Give a few cases where the Board could have bought. That will be interesting. In the third case you mention the owner brought the case under the attention of the Board himself?—He did.

31182. Did he state the price?—There was sent a letter of acknowledgment, together with a circular. I looked down the circular very carefully to see did it contain any reason which would justify the Board in not looking into the matter. I could find none.

31183. Did the owner fill the circular?—He told me he got no further communication from the Board.

31184. But did he fill the circular and return it?—I cannot say.

31185. But isn't that the very essence of the preliminaries to a transaction? Isn't that the next stage when you get a series of inquiries?—I should expect if the Board were anxious to do this work that in the case of a person selling an estate they would fill up a little deficit of that kind.

31186. But how can the Board proceed? What would be the basis of negotiation unless these queries were answered?—Well, supposing they were not answered, as the gentleman might not be much of a correspondent, I should think that the Board, seeing there was an estate offered to them which they should purchase, would make further inquiries.

31187. But how are they to know it is an estate they should purchase until the inquiries are answered?—From the representations made by the gentleman and put before them that it was a suitable estate.

31188. Do you credit to the full extent all that everybody says in his own case? Isn't it well to sift the information given by definite inquiry?—Yes, but I still adhere to the point that there is a *prima facie* case made for the purchase of this farm or estate by the Board, and it should not have fallen through owing to the mere fact that the gentleman offering it did not go through a very elaborate series of replies.* The Board had other channels by which it could have obtained information, and it did not try them.

31189. Did any of these outside sources of information suggest to the Board to resume the matter?—This has been very recent. It happened last year, and I cannot say that they have. The next steps should, I think, have started at the other end.

31190. CHAIRMAN.—Before you pass away from this subject, when you speak of the Board purchasing the tenant-right of a farm, I suppose you are aware it can only do so out of its income?—Yes, I gathered that from the Reports.

31191. That makes a difference?—Yes, but it has sometimes bought estates in that way.

31192. That was some years ago. There is this difference, that if the Board purchases an estate it gets an advance from the Land Commission for that purpose, but if it buys simply the tenant-right of a holding it has to do that out of income. You are aware of that?—Yes, I am aware of that.

31193. Most Rev. Dr. O'DONNELL.—And the tenant-right would generally be purchased in the neighbourhood of estates with which the Board was dealing?—It is unfortunate that the purchase of estates, which is the great work of the Board, has not taken place in County Leitrim. The Board has done absolutely nothing, I may say, for the county in that respect.

31194. You may take it as extremely unfortunate that no estates were offered which the Board could acquire?—I urge that the initiative should not be put on the people. I came into the parish of Killarga, in which I am now living, in 1895. The Congested Districts Board was then in existence for four or five years. All the Board had done for the district up till then was to send down a sort of Spanish donkey. The donkey was particularly annoying, and I inquired where it had come from, and somebody said it was "a foreign donkey down from Dublin Castle." I thought it came from the Royal Dublin Society, as I had not heard of the Congested Districts Board at that time. Then in 1897 the Board after some trouble sent down a lot of fowl, but through some accident they were a wretched set. I happened to have taken a fancy for fowl for some time. These were Minorcas; some of the hens were grey, while others had spurs of great length, and this wretched set were sent to improve the breed of fowl in the county. There was some accident or other in it, and that was all there was about it. In 1897, when the Board was then six years in existence, all they had done for the district was to have sent down these fowl and an old donkey, which I found from Reports had come from Kerry, where it had been for years.

31195. CHAIRMAN.—Then it was not a foreigner but a naturalised donkey?—In 1898 and 1899 we got a flock of very suitable fowl, and that is all the Board did. Here is my case. I, perhaps, knew as much as the simple people round about me. I knew nothing of the Congested Districts Board before 1897, and how were they to know? No member of the Board ever visited the county until 1903, and then, for the first time, two members of the Board came motoring round on an outside car. (Laughter.) Well, that expresses it very well, as they ran down as quickly as they could, and got through the county as quickly as they could and that was all we knew of the Congested Districts Board.

31196. Most Rev. Dr. O'DONNELL.—What followed the motoring? Were any projects of yours put before the party?—It was by pure accident I happened to meet the party.

31197. Sir JOHN COLOMB.—With whom did they communicate locally?—They called on the parish priest, of course. I happened, by accident, to be calling on the parish priest at the same time, and by that accident I came into contact with them.

31198. Most Rev. Dr. O'DONNELL.—Would you consider it fair that they should call on the parish priest? Must they call also on every curate?—Decidedly fair. They did the correct thing.

31199. Then what complaint do you make on the score of their not calling on you?—I do not want to make any complaint or wish to imply a complaint. I am a bit indignant only at their not coming for twelve years. I happened, it is true, to be living in the congested district, and the parish priest was not, and I happened to have written numbers of times to the Congested Districts Board, but it made no odds whom they called on.

31200. Do you know were any projects put before the motoring party?—Yes; one was the making of a road.

31201. Were there three roads put before the party?—I think only two roads.

31202. Did the Board give the grant and subsidy that was asked for?—Yes, they did. But I should suggest that we say nothing further about these roads.

31203. Mr. O'KELLY.—You say in the statement of evidence you furnished to the Commission that you are a thorough partisan, and that you began the study of the land question, biassed, if anything, against the tenant?—Yes. But I did not say I was a partisan. There must be a mistake of transcription there.

31204. On which side are you?—I am trying my best to tell the truth.

31205. Quite so. That is what I expect; but on which side are you on, the side of the tenant?—I have tried my best to find out the truth from all sources.

31206. You say you began a study of the question biassed against the tenant. Tell me the facts that made you biassed against the tenant?—I refer you back to where I state that a brother of mine suffered very much as a landlord.

31207. Was it that fact that led you to be biassed

* *Note by witness.*—I am able now to say that the Query Sheet was filled up and at once returned. When giving evidence I was not sure of this. A succeeding witness who described this as an evicted farm must have confounded it with some other. At all events his remarks do not apply—J.M.

Apr. 22, 1907.
Rev. Joseph Meehan.

against the tenants?—No, but on the contrary I thoroughly sympathise with them. The sentence means that I approached the subject with a perfectly clear mind. That would be a much better way of expressing it.

31208. I would like to ask you this. What were the reasons that induced you to be biassed against the tenants before you commenced to study this question?—I have stated that I am thoroughly in sympathy with the tenants, and I have given one reason already why I had opportunities of seeing the other side of the question. I am in thorough sympathy with the tenants, but I have left it to better men than I to be more energetic on their behalf.

31209. That is hardly an answer to the question I put. You say in your precis that you began a study of the question biassed against the tenants. I want to know the reason that induced that bias?—I have already tried to explain that. Translated into clearer language, and to express my mind more directly, it simply means that I approached the study of the subject with a perfectly clear mind.

31210. But before you approached a study of the subject at all you were biassed against the tenants?—I think I have fully answered your question, and I am afraid I cannot make it any clearer.

31211. Very well. I won't press that any further. The reason I put that question is that I notice in the precis you say:—"In Leitrim we have had no beneficent landlords. We have had some who were as bad as the laws allowed them, and the landlord evicted when a man showed independence, and had a notice to quit printed on the back of the receipt." You also stated that the tenants were treated mercilessly, and felt themselves in practical slavery. It was the fact that you had these things in your mind that led me to ask you how you could write that paragraph about being biassed against the tenants?—I have given that as exemplifying the way the tenants were treated, and I say something about the duties of the bailiff on an estate. I did not go on to develop that point. I will touch on what you are saying if I continue on that.

31212. CHAIRMAN.—Better finish the first point you were on—the definite point about the improvement of estates?—In the improvement of estates the sum total spent in Ireland is £480,362. The total spent in Leitrim, in Kilgariff, is £131 10*s*. I should say that the Board raised from that estate £147. Therefore there is no net loss to them in its improvement. Of course, that may happen in some of the other cases.

31213. You are aware that their receipts correspond with that expenditure?—Yes.

31214. And your general regret and complaint is that there have been very few estates bought in County Leitrim and consequently very little expenditure?—Yes, and I presume the improvement of estates would go as a rider to the first.

31215-16. Most Rev. Dr. O'DONNELL.—If estates could not be bought they could not be improved?—The third point I wish to make is with regard to the agricultural schemes, and I try to contrast elsewhere how Leitrim has been treated with other districts. If you take the population of the congested districts as the basis of comparison, or the number of scheduled districts as the basis of comparison, you will find that County Leitrim has not received proper attention. If you take the population of the congested districts as the basis of comparison, then for every £15 5*s*. spent by the Board in all the congested districts in Ireland, we fancy in County Leitrim that we are entitled to £1. The populations entrusted to the care of the Board will justify that proportion. Then if the number of electoral divisions scheduled under the Board as congested be looked to it will be found that there are 423 such divisions so scheduled. There are 78 electoral divisions in County Leitrim, and of these, 38, or one-half, have been scheduled as congested. The proportion scheduled of County Leitrim to the rest of Ireland is as 38 to 423 or as 1 to 11·02. That is to say, for every £10 spent elsewhere, on this basis of comparison, County Leitrim should have £1 spent here. But I particularly wish to bring out this—that it is not the money matter that we wish to principally draw attention to, but the absence of that wise guidance which the Board exercises elsewhere. We have had none of that guidance in County Leitrim. Of course the money spent is an index to the wise counsel and the trouble taken to improve the conditions of the people.

31217. Take the question of the money expended. Of course the people of Leitrim greatly need expenditure in many ways?—Yes. I do not think there is a county in Ireland where the capital held by the farmers is so small.

31218. The previous witness told us of the need for drainage, and that would require money. But, suppose we agree that a valuation of 30*s*. per head is a low valuation, would it not follow that a valuation of 6*s*. per head was very much lower?—Yes, certainly.

31219. Now if you were a member of the Congested Districts Board and found in Swineford Union or elsewhere that the people were valued at 6*s*. a head, would you not consider that their claims should come first?—Well, we are not patriotic enough in Leitrim to sacrifice ourselves for even the people of Mayo. To your question I would say certainly, if you look at the valuation of Swineford, which is the very poorest place in the jurisdiction of the Congested Districts Board. But let me point out that the sum of £375,000 has been there spent for the purchase of estates and only one-half of the union of Swineford is congested, or, to be accurate, 19 out of its 29 electoral divisions.

31220. Mr. O'KELLY.—How much of that represents the purchase price?—It will also include a large amount represented by the improvement of estates.

31221. The estates are improved out of the rents paid by the people themselves?—Yes; the Board drops 5½ or 10 per cent., and of course they also take a great deal of trouble in arranging about migration and striping.

31222. Most Rev. Dr. O'DONNELL.—You said Swineford was the poorest Union in Ireland, but on the other hand I gave the higher figure of 30*s*. per head because that is the limit of the Board's valuation?—I presume so. But comparing how Swineford Union has been treated with all Leitrim put together you will see that we have been extremely neglected. In the one parish of Kilmovee, in Swineford, there has been spent on parish committees' schemes the sum of £1,390, while for the total of Swineford Union under the same head there has been spent £7,855 13*s*. 6*d*. In County Leitrim the total expended under the same head for the same time was only £729. The same disproportion holds good for all items of expenditure. What I mean to say is that twenty times more money has been spent in Swineford Union than in all Leitrim put together.

31223. Are these figures up-to-date?—Yes.

31224. Are you perfectly sure of that?—I am taking them bodily from the Fifteenth Report of the Board.

31225. The figures for County Leitrim which you have given are for one year?—No; that is the total amount expended on Parish Committees in County Leitrim up to the date of the last accessible returns.

31226. Have you a Parish Committee in your own parish?—Yes.

31227. What is the grant?—£50.

31228. For how many years have you had that grant?—For two or three years.

31229. Did that grant come as a suggestion from the motoring party you referred to?—It did not.

31230. How did it come?—It came from my reading up the Congested Districts Board's Reports. I then put the matter before a little agricultural society we had to start it. I said to them, as an experiment, "Do this yourselves and do not throw everything on me." They did not do it, and I started it myself when I saw they would not do it.

31231. The Parish Committee work began in Mayo, and then came to Leitrim?—There is a great deal of money spent on what was practically Parish Committee work not included in "List of Parish Committee Grants and Expenditure" at all, because you will find they were working at that in other districts as far back as 1894, *i.e.*, before they formulated what is now known as the "Parish Committee Scheme." I refer you to the Fourth Report, p. 7.

31232. Would not you consider it was right to begin with the very poor district?—I would not consider it right to utterly ignore us.

31233. You were not utterly ignored, because through your own enterprise you came under the notice of the Board?—We were utterly unrecognised up to 1903. I am not sure whether this is the second

or third time we have had this committee grant. But let me say that I think the work of the Parish Committee is run on wrong lines. For this reason. The great work of the Board is to convert uneconomic holdings into economic holdings and so have farmers living on such holdings put into the position that they can live decently on them. The Parish Committee does not allow any grant to the person whose valuation is over £7. Consequently the committee are helping people to improve houses which they will be more loth hereafter to leave. They will be more reluctant to leave these houses, and you are therefore helping to stereotype congestion.

31234. Have you made any representation to the Board to the effect that the limit of valuation should be extended to £10 or £12?—It has been represented to officials of the Board several times.

31235. Has there been any suggestion that it would best suit this county if the limit of valuation were extended?—I am nearly certain yes. I am certain that fact has been indirectly suggested through the officials of the Board numbers of times. Then as regards the grant, the amount of money is so very small, £50, to Parish Committees, that naturally we think the very poorest people in the district have the greatest claim upon it. It would be useless to scale up the farms to £10, unless, at the same time the Board gave a larger amount of money.

31236. Is the whole of your parish congested?—Not the whole of it.

31237. And this £50 is available for the congested area?—Yes

31238. Do you thing any body like the Congested Districts Board have any reason for fixing the limit of £7 unless they had ascertained the wishes of the localities?—I should think that the Congested Districts Board ought to be able to form a better opinion on the matter than the people of the localities in which they would be working.

31239. Do you think would the people in your parish to-morrow be for extending the limit up to £10?—Decidedly.

31240. Most Rev. Dr. O'Donnell.—Why didn't you represent that to the Congested Districts Board?

31241. Mr. Sutherland.—Because he thinks the Congested Districts Board should come and find that out for themselves?—The Congested Districts Board in thinking this over and fixing the limit should have seen that the limit would be better at £10, and as to my opinion of the Parish Committee going on wrong lines and that the valuation should be fixed at £10 at least I should like to strongly bring out this fact that if the present sum is to be so small then in a district where the Board has done almost absolutely nothing, there is no good in extending the limit to £10.

31242. Most Rev. Dr. O'Donnell.—Would not £50 coming for a great many years do a great deal for your parish?—It would.

31243. Especially if you were able to represent to the Board that there were estates they could buy there?—Yes, of course, and provided the Board attended to our representations.

31244. So that the work of the Parish Committees would not stand alone, and if the estate work and the parish work went on together things would be pretty much to your satisfaction?—Well, there is this objection to the lines upon which the Parish Committee is run, namely, if there are estates to be purchased the Parish Committees are rendering it more difficult for the farmer who has made a pretty little place out of his home by the encouragement and assistance given by the money of the Parish Committee to leave that place.

31245. Do you then contend that the man valued at £7 may have a holding that will not become an economic holding by-and-by?—It will never become an economic holding looking at the way things are going on at present.

31246. Take the man valued at £7, if his land is drained might his holding become quite economic?—Not in County Leitrim.

31247. Up to what valuation then must you go?—The valuation, in my opinion, should be £14 or £15, particularly in the more backward parts of County Leitrim.

31248. And you say that the homes of those under the economic level of £10 or £15 are not to be improved at all?—Well, you are between the devil and the deep sea.

31249. Then make a selection?—I would say one does not like to deprive the very poorest people of this benefit.

31250. You have said that the economic level is £10 or £15: Now, I want to know are you going to leave those homes unimproved until land can be got for the people occupying them?—No; there has been too big a temptation put before us to improve them. We could not say to those people: "We won't give you any of this money." The prospect of getting more land through the mediation of the Congested Districts Board is not in view. It is not to be reckoned with.

31251. Then would you leave the people on an uneconomic holding without any improvement under the Parish Committees' schemes until by an addition to the land, got some way, the holdings are enlarged and made economic?—No, I would not. The prospect is too remote.

31252. It comes to this then, that whether you like it or not you have got to improve the homes of the people?—Some of them are extremely wretched certainly and should be improved in every possible way.

31253. Why would not the Parish Committee, if it does not like to improve the household, improve the drainage?—Because we think that the greatest necessity of all is the improvement of the home, because that directly affects the health, the welfare, and the happiness in every way, of the people. Of the two, it is the more important matter.

31254. Then you come to this conclusion, that the Parish Committee is doing exactly the right thing?—I do. I say the Parish Committee is doing the right thing under the circumstances imposed upon them, but there is that drawback to it. You may do the right thing and have a drawback in doing the right thing. The net result is good, but there is that radical drawback. The car has been put before the horse.

31255. Is there anything under the sun that has not a drawback attached to it. On the whole isn't the Parish Committee good for the small farmer?—It is particularly good for Leitrim, because in no other way are we able to reach the Board at all.

31256. Does it come to this, that you have been able to reach the Congested Districts Board through the Parish Committee because it is a feasible scheme. Has the Congested Districts Board ever turned its back on any feasible scheme put before it?—It has.

31257. What was it?—A scheme for drainage at any rate.

31258. The Board has no power to do drainage on a large scheme, I am sorry to say?—But it has done it.

31259. It is able to do drainage when it acquires ownership of a large area of country, but if it does not acquire the ownership of a large area, it has not the authority?—Then I am afraid I have been led astray, because I wrote about the drainage of a particular river running along a congested district. That letter was answered in six months. I wrote again and the correspondence went on for two years and nothing has been done.

31260. Mr. Kavanagh.—Does the Board own that property?—No; but it was perfectly aware that, as Dr. O'Donnell now informs us, it had no power to do the work, and why didn't the Board forthwith put that reason before me, and that would have stopped the matter? Why wasn't my letter straightway answered, and why state as they did that Mr. Doran was busy elsewhere and could not attend to the matter just then.

31261. Most Rev. Dr. O'Donnell.—It works out that way in practice when the difficulties of drainage are so great. In some cases it might be that these difficulties would be thinned down, and then the Board might be able to do the drainage, but in my experience they have not been able to do drainage on a large scale except where the property has been acquired by the Board?—Then all the worse for County Leitrim.

31262. Mr. Kavanagh.—What would be the valuation of economic holdings in County Leitrim?—As well as I can make out I am afraid there could hardly be an economic holding at a lesser valuation than £15.

31263. How many acres does that represent?—If you ask me how many acres a man should have in order that he might have an economic holding I will say that it altogether depends on the class of land he has. In County Leitrim where we have the particularly bad

Apr. 22, 1907.

Rev. Joseph Meehan.

class of land that I have described in the first part of my notes of evidence, the amount must be very large, and in different parts of the county the holdings must be of different sizes to constitute economic holdings. In the mountain districts it should be a very large holding. In fact fifteen or twenty acres in the low lands from which the people were driven would be far better than twenty or thirty acres in the high lands.

31264. But you have not got very good land or very large low lands in the county?—It is very bad land as far as I have been able to gather.

31265. Sir John Colomb.—Taking a holding of £15 valuation, would a man with that valuation, generally speaking, keep a horse?—I expect he would. I have tried to bring out that there are almost no ploughs in this part of the county. In my parish I do not know of more than two or three ploughs, and working bad land with spade labour is particularly difficult. It is extremely difficult, and that accounts perhaps for the rather small amount of acreage that is cropped in County Leitrim.

31266. How many holdings in your parish, approximately, are of £15 valuation and upwards?—I am afraid I could not well answer that, but I have given you, in my notes, the fact that the holdings in County Leitrim that are under £15 valuation form 83 per cent. of all the holdings in the county, and in my opinion the holdings under £15 valuation are uneconomic. Taking the parish as an average one, 83 per cent. of the holdings would be uneconomic.

31267. What is the name of your parish?—Killarga.

31268. Of how many electoral divisions is it made up?—It is made up of Cloonlogher, Belhavel, Killarga, and part of Mahanagh.

31269. Chairman.—Is it possible to turn these poor holdings you have described from uneconomic holdings into economic holdings, merely by enlargement—by the addition of land?—Yes, if there is some land adjoining uneconomic holdings that could be striped and attached to them.

31270. Take this case. You have three men living on uneconomic holdings beside one another. In your opinion if you were to migrate two of these men to some other part of the country and throw the land they vacated into the holding of the man that remained would that make the enlarged holding of the man that remained there an economic holding?—I should expect so.

31271. Then would the addition of more bad land to an uneconomic holding of bad land turn that enlarged holding into an economic holding?—Yes, on the principle I have already stated, that by the addition of more land you run the valuation over £15.

31272. Well, the valuation might be anything?—I should expect in the case you state you would make the holding economic.

31273. Then in your opinion it is quite possible for a man to have bad land, and nothing but bad land, yet, if he has sufficient bad land, he has an economic holding?—He would have, by industry. Of course the difficulty is he would have no cropped lands, still if he had some good meadows——

31274. Oh, yes, but supposing there was none available. If you were able to carry out a large migration scheme and get rid of two out of every three of the men who have uneconomic holdings and enlarge the holdings of the men that remained by the addition of the vacated holdings, now unless there was some good land on the vacated holdings would the mere enlargement turn the holdings into economic holdings?—I should expect it would, because the man who remained would be in the position of having lived on his own farm for many years and having cultivated it all he could, so that there would be some good land on it. That would also apply to the vacated farms. There would be some good land on them, and I think all this taken together must render the enlarged holding economic.

31275. That assumes that on each holding there is some good land—I mean land fit to bear some cropping?—Yes.

31276. You think that giving a man three patches of tilled land where he had only one before would make all the difference?—Yes, assuming that the other farms were equally cultivated with his own he would be three times better off.

31277. That would entail three times the labour in order to keep up the land to the extent of tillage it was in before he got it all?—Yes; it is peculiar that unless you cultivate the land of Leitrim it goes back and is soon as bad as ever. I am looking at the case you mention in this way, that this man with the larger holding will now be able to labour all this land, because he may now have a horse, and so be able to use more than mere spade labour. As I have told you, it is almost all spade labour in County Leitrim.

31278. You think that if he got a bigger holding that would make it worth his while to keep a horse, and by the possession of a horse he would be able to do the labour three men did before?—Yes, I should think so.

31279. You don't think it would be necessary for that man to employ labour?—Well, not only himself but all the women and children would work.

31280. You think he could work such a holding with his own family?—I should think so.

31281. Supposing he could not, would it be worth his while, would it pay him to employ labour?—I am afraid that at the present time it hardly pays to employ labour on any farm in County Leitrim.

31282. Supposing a man had a large holding, treble its present size, do you think that the whole difference between profit and loss would lie in whether he could do all the work himself?—I do. I am nearly certain that if you employ labour on any farm in County Leitrim it will not pay to do so as agriculture is carried on at present.

31283. You do not think it would give a farmer any return to employ labour?—No; I do not think so.

31284. In enlarging such a holding it would be very important not to give a man more land than he could readily cultivate by his own and his family's labour?—Well, I not only look to the present, but to the future. If that man gets a horse he will be able to do a vast deal more than previously.

31285. I am taking into account the horse, and I ask would you give a man more land than he could really and properly till with the help of a horse?—I think that would be a good principle to go on.

31286. So that in carrying out enlargements of that sort you could make the mistake of going too far and giving a man too much land if you were not careful?—Yes, the principle might possibly lead up to that.

31287. Most Rev. Dr. O'Donnell.—How many families are in the scheduled area of your parish?—I am afraid I could not straightway give you the answer. I think there would be about 202.

31288. From a previous answer you gave me I think the remedy you suggest for most of these people is to migrate?—That would be one of the remedies. The other remedy I suggest is that mountain land would be brought into cultivation by the Government.

31289. How many of these families would you migrate?—I would first consider some scheme by which their uneconomic holdings could be rendered economic without migration, and that would be a much better plan, I think.

31290. It would be much better to improve the holdings, but I want to work out your point about the Parish Committees. You do not want to improve the homesteads of these people, because ultimately they will have to be moved. Now, how many are you going to move out of your parish?—In the first place I would move, if it could be done, the people back to the lands from which they have been driven. The people of two townlands, which would mean nine or ten, were driven from the very best land in the parish, which was taken over by the landlord, and their houses razed to the ground. These people were driven out without any compensation for improvement. One of these men, for instance, got 17 acres 1 rood and 4 perches of Irish measure, and it was completely tussocks and bog. I think he and his descendants have the first claim to getting back to the lands from which they were driven.

31291. That is one remedy. You would bring them back to the lands from which they were put away. What is the next remedy?—This man has converted the tussocks and heather on which he was planted forty years ago into a fairly good farm. What he has done could be done by others who had capital enough to expend.

31292. That means the improvement of the holding?—Yes, by a loan from the Government at a small rate of interest, which would be a first charge against the farm.

31293. Have you any other remedy. You have not migrated anyone out of the parish yet?—No; nor if it could be helped would I suggest it.

31294. What, then, is your objection to improving the homesteads of the people. You won't migrate them, and yet you have some objection to improving their homesteads?—I have the objection that when you have an uneconomic holding that by no means could be rendered economic, that it is not wise to fasten that man deeper in that uneconomic holding, and that is what is being done by the Parish Committee. It is both unwise and a waste of money and labour.

31295. We have to verify the hypothesis in your parish, because you are not going to move anyone out of it?—But it is migration if some tenants are moved from one part of the parish to another.

31296. How many would you move?—I could not be definite.

31297. I should like you to be pretty definite?—I think you could easily obtain the farms of eight or nine, at all events, who should be moved.

31298. Their places would have to be improved whether they are sent out of the parish or not?—I have not said that because the other remedy is forthcoming—namely, the improvement of the mountain lands and bogs which are adjoining.

31299. Which would leave them their present homes, and that would seem to indicate that their present homes should be improved?—In this case it would. But I have just expressly excluded this case.

31300. Mr. KAVANAGH.—You said a little time ago it would be possible to give too much land to some people. What family would you have in your mind's eye?—I do not think anybody would object to having too much land at a fair rate.

CHAIRMAN.—I do not think the witness had any particular family in his mind. It was only an academic point, and not a concrete instance.

31302. Sir JOHN COLOMB.—You have already told me of the divisions in your parish, and I gathered from your answer to the Bishop that you suggested moving tenants from one part of your parish to another. Now, it appears there are 1,020 holdings, and 90 per cent. of these are under £15 valuation and 335 holdings are under £4. You have stated that a holding to be economic should not be under £15 valuation. Now, I want to know as an arithmetical calculation how you propose to enlarge and deal with 90 per cent. of the holdings in your parish, and make them all economic without any migration out of the parish?—If we confined our attention exclusively to agriculture, and thought of no other industries then what you put before me might present a good many difficulties. But there are a good many other ways besides agriculture and the bye-industries of agriculture by which congestion could be remedied, and the people assisted to live in a decent manner. There could be a number of industries started which would enable the people to make something, and without going to a very great distance.

31303. Is not that an argument that you must look to other industries for giving employment and improving the small homes of the people. Does that not rather cut the other way to what you suggest?—Yes, it does; but we are to consider things as they are, and as far as I can see, except in one direction, there is no prospect of any great industry on which you could put any great value as enabling the people to live on the holdings on which they are at the present time. That one industry I hope to refer to before I leave.

31304. Sir FRANCIS MOWATT.—I understood you to say that as regards the schemes for the improvement of the houses of small tenants you are rather disposed to try hard to get them extended to economic holders?—To some extent, but I do not want to overstrain that.

31305. In cases where it is hopeless for the present to obtain economic holdings you do not question that it is better to make the present holding meanwhile as comfortable as you can?—I should be glad to see that.

31306. CHAIRMAN.—Isn't it a fact that quite recently the grants to the parishes in this county have been largely increased?—It is not quite correct to put it that way. The parish committee grants have begun only recently in the county. That is indicated by the fact that only £729 has been spent in that direction in this county up to the present. I am not positive that these grants have been increased.

31307. Take your parish of Killarga. From a return which I have here it appears that up to the 31st of March, 1905, a sum of £37 16*s.* 7*d.* had been paid to your parish committee. In the next column there is given as the gross grant for 1905-6 £50?—That would indicate that for the first year only £40 was given, and next year £50 was not given, but offered.

31308. I see that is so in every case. Take the parish of Glenade. Up to the 31st of March, 1905, the grant was £37 9*s.* 2*d.*, and the gross grant in 1905-6 was £70. Then, again, Glenfarne. Total grant up to 31st of March, 1905, £14 13*s.* 2*d.*; gross grant in 1905-6, £70, and so on all down?—If you take the last instance, £14, it does not indicate that only £14 has been expended. The accounts were made up for the financial year ending 31st of March, and there may have been a larger amount received in that year, because they did not understand things exactly, and were not quite in time, and there may be a larger additional sum which does not appear there.

31309. Why should it not appear here?—Because the return ends at the 31st of March, 1905, but perhaps there were instances in which the people had not quite completed their works and did not get the money, but might have got it later.

31310. For the year previous to 1905 or the first year of the establishment of the parish committees?—These committees were in existence a number of years before they came to Leitrim. The last time I made up these accounts was in 1905, and at that time only £50 had been expended in all Leitrim, although thousands had been expended in other counties—to be exact, £22,094 13*s.* 0*d.* altogether.

31311. How many years has County Leitrim had parish committees?—I think ours was the very first, and I think this is our third year.

31312. Then 1906-7 would be your third year?—Yes.

31313. And in your first year, 1904-5, you spent £37?—Yes.

31314. And the following year, 1905-6, you got £50?—Yes. That was the gross amount sanctioned.

31315. So that 1904-5 was the first year in which parish committees were established in County Leitrim?—To be absolutely correct, I should say there was one parish committee before that. It was established in Mahana, in the parish of Inismagrath, and it expended very nearly £50.

31316. That committee appears to have spent £21 7*s.* up to the end of March, 1905, so that they could not have been established very long, could they?—The committee may not have been under the same name, but I am certain this committee was in existence a year before ours.

31317. It had not spent anything apparently?—I am sure it did, because I remember seeing from the returns that there was a sum of £36 expended.

31318. They succeeded in spending £16 less than you did?—That was last year.

31319. No, up to 1905. This return shows not only the amount spent for the year previous to 1905, but the whole of the amounts spent by any parish committee up to 1905. The parish committee to which I refer, though existing in the parish of Dromkeeran, may have been known by some other name, because I am quite certain of the fact that they expended £36 before we expended anything.

31320. Will the parish of Tullycleevan explain it?—That is it—that is in Inismagrath.

31321. It does look as if it had been in existence for more than one year before 1905, but there is no grant for 1905-6?—No, because it has ceased to exist as Tullycleevan, and is now merged in the parish of Inismagrath.

31322. Most Rev. Dr. O'DONNELL.—You told us there was something over £700 as a total amount expended on parish committees in Leitrim?—Yes.

31323. Are you aware of the amount of the grant for the year ending 31st of March, 1905?—£729 18*s.* was the amount expended up to that.

31324. Are you aware in addition that for the year 1905-6 the sum was £1,090?—That covers the financial year 1905 and 1906, and the totals of that expenditure are not yet published. £1,090 is the gross grant sanctioned. There is nothing to indicate it has been obtained.

31325. That is a substantial omission?—No; I think it is natural and in accordance with the way

Apr. 22, 1907.

Rev. Joseph Meehan.

these reports are brought out. I got last year's report on the 15th September, 1906, but the financial year was up in March—the report did not come on until the September following. In the next report the return of actual expenditure for the year 1905-6 will be given.

31326. Not to mention this year the amount spent on parish committees in County Leitrim is £1,796?—Well, I should like to compare that with what has been given to other counties in Ireland to see is it in the proportion of 1 to 15 or 1 to 11, which I claim County Leitrim should have. There is no use putting forward this county's subsidy by itself.

31327. It is not put forward except to correct your figures and bring them up-to-date?—I am not sure that I have brought forward any figures that are incorrect. Here is the last issued report of the Board; they are in perfect accordance with it.

31328. The figures you gave were for one year, but two years have since passed in addition to that, and the expenditure for past years was £1,796?—The figures I gave covered, I think, two years and they represent the total amount spent in Leitrim, whereas thousands and thousands had been expended elsewhere up to the same date.

31329. At all events the total amount expended up to a year ago was £1,796?—I accept your figures, as I presume you have a later source of information than the last published Report of the Board, but I have no way of knowing the relative amount actually given to Leitrim in comparison with other counties later than the date I gave. Your figures, I submit, should not be put forward by themselves, but in comparison with those for other congested counties.

31330. You are quite right, because if you get along with the other departments of the Board's work in equal proportion to what you have done under the parish committees' schemes you would be very well off indeed?—Well, I should like to go into these figures, but I should expect that to be the case for this reason, the Congested Districts Board's efforts were expended almost in no other way in County Leitrim except in parish committee schemes.

31331. That was the easiest way they found they could be of most use to you?—It was the easiest way for them to let us do all the work for the district and with very little supervision or assistance from the Board.

31332. Don't you think it is the best principle of enterprise in Ireland to get the local people to do as much as they can for themselves?—I do, but I want to bring out this fact that the Board's officers were experts in the matter and could have done a vast deal more than we, who were simply groping our way, could have done for ourselves.

31333. Mr. SUTHERLAND.—But don't you see if every locality was dealt with in that way what a huge staff the Congested Districts Board would require?—I do not know that they would require such a large staff. The present staff could sometimes come and see us. It is too bad that for years and years they never came near us at all.

31334. The general principle throughout the whole of your evidence is that you took a certain statistical basis of population and you say Leitrim has due to it so much in money?—That is substantially the basis.

31335. You are aware that in the administration of business like this there are a great number of circumstances that have to be taken into account that would modify that basis, such as necessities and opportunities?—I fully recognise that the Congested Districts Board must necessarily have been totally unaware of the necessities of Leitrim, because they made no effort whatever to remedy them.

31336. Most Rev. Dr. O'DONNELL.—Why do you say so?—Because they were not here at all.

31337. Mr. SUTHERLAND.—But is it not the duty of the people of Leitrim to let the Congested Districts Board know of their work and requirements?—Yes, but I think the evidence I have given will go to show that as far as the people of Leitrim are concerned the Board might as well have been in Mars, because they were unaware of its existence.

31338. Most Rev. Dr. O'DONNELL.—How could they be unaware of its existence with so many animals placed in Leitrim?—I have told you about that, and that I was not aware of the Board before 1896 or 1897.

31339. Mr. SUTHERLAND.—But the people of Leitrim should be like the people of any other congested district. You know the law assumes that every one knows the law? Well, if you do not see much of the Board or its officers, and you don't bother much reading the papers how are you to know about the Board?—I have had far more opportunities than the majority of the people for knowing about the Board, but if with my opportunities I was in a state of ignorance what must have been the condition of the humble peasant in the matter? From the outstart, from 1891, the other districts were overrun with their officers and instructors. That brought them into touch with the Board. They never appeared here.

31340. I have heard a great deal about the ignorance of the people since I came on this Commission, but I am bound to say I have seen none of it. All the small farmers who have given evidence gave it in a most intelligent way?—If you have 67 or 68 boards in Dublin how are you to expect the peasants of Leitrim to know the particular board to go to?

31341. These peasants have come here and have given as intelligent evidence as any person who has come before us. I cannot conceive that such intelligent people would not know of the existence of the Congested Districts Board?—Well, even if they knew of it they did not know that the Board is ready and willing to do any benefit whatever to County Leitrim, and I am afraid that all the work the Board accomplished in the county up to 1903 or 1904 would supply them with substantial grounds for holding that belief.

31342. I would recommend you, if I may make a recommendation, that you should try and strengthen the hands of the Congested Districts Board rather than be hypercritical about it?—I concur that the Board are doing their very best and working almost heroically, but it has not been in Leitrim.

31343. Most Rev. Dr. O'DONNELL.—How many domestic science classes were instituted?—I know of four.

31344. Under the Congested Districts Board?—Yes.

31345. Were they a success?—Yes; I think it was the very best work done by the Congested Districts Board, and excellent work of its kind.

31346. Do you know did any of the other parishes apply for classes?—I could not say. It is not in my power.

31347. Do you know of any place that applied for a class and was refused?—I cannot say that I do. But that throws us back again to what I was at, that a great many parishes did not know exactly all about these things. You cannot, I think, argue away that fact. It was not their fault, as they had no opportunity.

31348. Mr. KAVANAGH.—From your experience do you think the people would be willing to migrate from your parish to a good holding in another part of the country. How far would they migrate?—I have said that migration would be best if it could be done within the parish, and, furthermore, if there were lands in other parishes from which tenants had been driven, those tenants or their descendants should naturally have first claim on them or in any redivision of them, and that, I believe, is the case in all waste lands in County Leitrim.

31349. But supposing such lands were not available in the parish, how far, from your knowledge of County Leitrim and speaking in a general way, do you think the people would migrate?—I have put the question to numbers of farmers and they said they did not care. They would not mind going anywhere they got a good farm. I have seen it stated that farmers are reluctant to migrate, but if the people of the district they would be migrated to would have no objection, the migrating farmers would have no objection whatever to go.

31350. Even to moving out of their own county?—Yes.

31351. Singly?—Well, of course, it would be better if they went in colonies, but, as I have said, provided there was no objection in the other county the farmer would go anywhere. The man who is living on the top of a mountain and is not able to make ends meet is most anxious and prepared to better his condition in any way in the world. But I am afraid that the farmers of County Meath or Westmeath would hardly welcome the Leitrim farmers in the way that the Leitrim farmers on their part welcomed the farmers of Donegal, Fermanagh, and distant Kerry who were sent in on them in the

time of the Cromwellian settlement. We have men here from Donegal, some of its best, like the O'Donnellis, and men from Kerry and other parts of Ireland. The people of Leitrim divided their lands with them at that time.

31352. Don't you think the objection of the people of other counties could be got over by a little judicious management?—You would be in the position to know the people of Westmeath much better than I can. If lands which had lain long untenanted were bought and striped up I cannot see any reasonable objection, any genuine reason, why the farmers should object to that, provided, of course, that they got a fair price for the land. I rather fancy they would be glad to get rid of their land and see it turned into tillage, because everybody knows that the belief prevailed some time ago that grass land bullock walks were a paying concern, but that opinion is now exploded. The large farmers do not find that these bullock walks are paying them now as before.

31353. Is tillage going out of this part of the country, do you think?—Looking at the statistics issued by the Department of Agriculture you will see that the amount of tillage in Leitrim is practically stationary.

31354. I notice by a return in the "Freeman's Journal" that it is going down in the province of Connaught. Can you tell me whether you think in your locality tillage is decreasing or not?—In my opinion the amount of tillage is a constant practically, and that would be borne out by the figures I have referred to. Labour is becoming difficult to get, and on that account there would be a tendency for tillage to go down to some extent.

31355. I understand it is nearly all spade labour in this county?—It is almost exclusively spade labour, and, furthermore, the Leitrim farms are extremely hilly, and even on an economic holding, I do not think it would be possible to plough the land. It is bad land and practically all of millstone grit, and in a soil of that kind the material is very bad for cropping and extremely hard to work.

31356. You do not think they could work a horse on it?—In all parts of Leitrim, perhaps 50 per cent. would, I am afraid, find it extremely difficult to do so.

31357. In reply to Lord Dudley you said you thought a man would be better to have two extra holdings thrown in with his own, and then he would be able to work with a horse and would be able to till more than he is able to do at present by spade labour?—In giving that answer I must have had in my mind farmers who had, at all events, tillage lands that were not on the side of braes. Of course, if you had level or fairly level flats or fields a horse would be all right.

31358. Then your answer would not apply to those on the poor lands on the side of the hills?—Even in some cases if you have hills you might also have some fairly level fields, and then it would apply.

31359. Then why don't they use a horse more in this county?—One reason is that the farms are so uneconomic that farmers could not afford to do so—they could not afford to have a horse. Another reason is that the soil is not deep and it would not suit for a plough to go down and dig up sub-soil of such a bad nature.

31360. Aren't they good neighbours, and could have a horse between two or three of them?—They manage in some instances in that way.

31361. Sir JOHN COLOMB.—Do you find a good part of the work of the Parish Committee that of inducing people to remove manure heaps from the front of their houses?—Very little of that work.

31362. I notice that in the Union of Manorhamilton there is very nearly £50 a year paid out of the rates and State money for sanitary inspectors?—Yes.

31363. Do they do much work for their money?—I am afraid just now they are active enough.

31364. Is it the Parish Committee that quickens the wheels?—They are sporadically active—when an epidemic arises they are extremely active.

31365. And sleep the rest of the time?—Yes.

31366. Do I understand your general description of this district to be want of employment and absence of a demand for labour?—Yes, there is very little labour to be had. If you look into Fox's returns you will see that Leitrim is in the very lowest list of the wages of labour. It is only 9*s.* 3*d.* a week. There is a gentleman present who told me, and also said it in the House of Commons, that he could get any amount of labour for 6*s.* a week here, provided employment were fairly constant.

31367. I see that in the Union of Manorhamilton there has been a very considerable expenditure, nearly £2,500, sanctioned for putting up labourers' cottages?—Yes.

31368. They are uneconomic holdings, are they not?—Well, I am doubtful if you would call them holdings at all. It is only as a convenience, as a home for the present, and the labourer is expected to labour the land about. You would hardly class them so high as holdings.

31369. But money is being spent and great efforts being made to reduce the number of uneconomic holdings, and here is a considerable sum of money sanctioned and to be spent in the erection of labourers' cottages. Is that because the small holders want a supply of labour. Take the 335 small holders in your parish who are under £4 valuation, they are really in the position of labourers with allotments?—Well, I do not know whether any of these people would be able to procure employment.

31370. But they cannot be all the time occupied in working their holdings. They must have surplus time and energy if there was a demand for labour?—From the figures I have given you will see that tilling one acre of potatoes costs a man at least seventy-eight days' work, and if you follow out the suggestions made by the Department of Agriculture it will cost forty-eight days' additional. That is a large amount of tillage work, and tillage on bad land is much more laborious than tillage on good land. On bad land it occupies more time, and there is a less return for it. It should be borne in mind that at times it is constantly raining here, and the 78 fine days cannot be had just as wanted, but in bits and scraps.

31371. But surely the holder of a £4 valuation, if he is a strong man, cannot find absorption for all his energies and labour on his own farm; does he not go out to labour?—I do not know any instance of it. He would be delighted to go out if called upon, but there is no demand.

31372. Then where are those labourers for whom cottages are being erected at the cost I have given you going to get labour if there is no demand for it?—A great many of these men are tradesmen and they labour. The houses have been put up for them.

31373. Sir FRANCIS MOWATT.—Do tradesmen also go out and labour?—Yes, masons and carpenters. I would like to point out that we are practically a non-maritime county, and get no benefit from fisheries, and to those schemes the Board seems to have devoted a vast amount of attention. Of course if the officials are employed in that work then they have no time to spend coming to Leitrim.

31374. Mr. KAVANAGH.—How much of a sea coast have you in this county?—About a mile and a half.

31375. Sir FRANCIS MOWATT.—In the summary of the disadvantages which you gave you say Leitrim has at least half a dozen disadvantages; one is that it has no fisheries, and that you have explained. Another is that it has no public institutions of any kind or description, not even a jail. I should like to know why you put it as an annual drain in the county, not having a jail?—I explain in my notes of evidence that the asylum for Co. Leitrim is situate in County Sligo, and Leitrim sends out of the county over £8,000 annually for the support of that institution. That is a large amount, and I consider it a great drain. For the year 1906-7 the net charge on the county after deducting the "Rate-in-Aid" (£3,101) was £5,078. The previous year the Sligo Asylum cost the Leitrim ratepayers nearly £150 more.

31376. Would it be a drain supposing you spent the same amount in your own county?—No; because then we would have the circulation of money in the county and it is one of the great disadvantages of the county that we have not that. The whole £8,000 would then be spent in Leitrim.

31377. Then you go on to say you have double or treble the average amount of absenteeism, and you place that down as a loss of £100,000 a year. I think it would be well if you would develop that a little?—That is a very rough estimate, and it is based upon a return in Thom's Directory. Looking down that I can say that at least seven-eighths of the landlords are living outside the county and taking the rents away and spending them elsewhere.

31378. By absenteeism do you include those large

Apr. 22, 1907.

Rev. Joseph Meehan.

grazing ranches that are left here with nothing but a herd upon them?—No, I did not include that in the £100,000.

31379. You mean by absenteeism the case of a landlord owning a country place in the county, but who does not reside in Ireland, and the rents are paid away out of the county?—Yes, that is what I mean. A few of the absentee landlords may have shooting lodges, but none have seats or residences, I think, in the county. At least, in all North Leitrim there is not a single one.

31380. Can you tell us whether that absenteeism includes the gentleman who has two estates, one in this county and another in another county, and he lives in that other county, or do you refer solely to men who are absolutely absent from Ireland?—I mean to say that of the estates in Leitrim the vast majority of the landlords live elsewhere, having an agent, an extremely clever man, and it is he alone who has to deal with the tenants.

31381. Do you mean by elsewhere out of Ireland?—For the greater part on the Continent or in England. Lord Massey, for instance, takes about £24,000 out of the county and no one has ever seen him in Connaught. Then there is Mr. Clements of Glenbuoy. I have it on the authority of his agent that even he only saw Mr. Clements once. That is a sample of absenteeism.

31382. I am not arguing the question; I wanted to know the fact?—Yes, and I want to bring out the fact that that is one of the great losses of Co. Leitrim, no money being spent in the county. If we had these landlords living here the money would be spent and circulated in the county. The rent raised would not then be a dead "loss" to the county.

31383. Sir JOHN COLOMB.—Isn't it a fact that Lord Massey lives and keeps a large staff in Co. Limerick?—If he does, that is no benefit to Leitrim.

31384. You mean Leitrim against the world. Is that it?—I should prefer he would live in Limerick rather than in London, and in London rather than on the Continent, but I should prefer, first of all, that he would live here and spend his money here.

31385. Comparing Leitrim with Sligo you consider that by reason of absenteeism Leitrim is a great deal worse off than Sligo?—Yes, a great deal worse off.

31386. The presence of the landlords who live in Sligo is a great advantage to that county?—Yes; one of the best landlords in the country, Sir Josslyn Gore-Booth, lives in Sligo.

31387. You consider that landlords living in their demesnes is a great advantage to a district?—Decidedly.

31388. Sir FRANCIS MOWATT.—You estimate the loss by absenteeism at £100,000 a year. I wish to understand how you come to those figures?—I take it on the valuations as given in Thom's Directory of the several estates in the county, and I include the landlords living in the county, and I find that the total valuation is something like £120,000. Then deducting the valuation of those residing in the county I say, roughly, that £100,000 is the amount of money taken out of the county and expended elsewhere. I have no better means of getting at it. It is a very rough estimate, and I do not rely very much on those figures. Checking this return by what I otherwise know, I am nearly sure it is not less, but it may be a great deal more.

31389. Mr. SUTHERLAND.—Is emigration from Co. Leitrim on the increase?—The statistics establish that. I have been watching Whittaker's Almanac, and the emigration from Leitrim seems to be about a thousand constantly. It was so every year between 1891 and 1901. In the ten years the population sank from 78,618 to 69,343, *i.e.*, by 9,275. Allowing for the natural increase of population, this would in fact average a good deal over 1,000 a year. Again the authority just named states that in 1903 1,082 abandoned the county. Of course, the population is going down, and 1,000 upon 69,000, or rather upon 67,000, which was about the actual population in 1903, is a far greater drain than 1,000 upon 78,618, the population of County Leitrim in 1891. In the last return—that for 1905—the emigration was 835, *i.e.*, 1·20 per cent. on the 1901 census return. It would be a much higher percentage on the real population of 1905. During the decade 1891-1901 the average annual decline was 1·17 per cent.*

31390. At what age do the people emigrate?—Just when they are strong enough to earn a living abroad.

31391. You consider that a very great drain on the energies of the county?—It is.

31392. Is that the principal drain?—It is certainly a drain of £120,000 a year on the county. Take the case of a thousand people who leave Leitrim every year, full of energies which go to the building up of another country. I think economists agree that each of these persons costs £120 to the county to rear and educate him until he is fit to leave it, and most economists say the figure should be £200. But if we take the thousand at £120 each, that gives us £120,000 a year. But that is hardly the worst feature of it, because the best and most energetic men and women go, and the wastrels remain behind.

31393. A great deal of the difficulty arises from the fact that it is the people least qualified to make the best of the country that remain?—Yes, and naturally the race will go down in a very short time too. Some people maintain that the Celtic race is not as good now as it has been, that this is already telling on it.

31394. CHAIRMAN.—I wish to ask you one general question that arises out of an answer that you gave to Sir John Colomb. You seem to hold the opinion that it is an advantage to the county that the landlords should live there and spend their money amongst the people of the county?—That is my view at the present time, but I should be very sorry to have living in the country a landlord such as we had in Killarga, who spent his money in the country, but who knew the state of every farmer, and whenever he saw a farmer able to bear an increase of rent he put it on. But with the landlords' power clipped we should be glad to have them in the country.

31395. Take it as a general proposition, you would think it a good thing that the landlords should live in their places, and spend their money in the country?—Yes, and not only that but take a leading part in promoting the welfare of the country, as for instance the individual landlord mentioned does.

31396. Would you be disposed also to agree to the general proposition that no man of energy and brains is likely to voluntarily reside in a place where he has nothing to do?—Yes, but I think he would be a very unfortunate kind of man who did not get plenty to do anywhere he is placed.

31397. Take an energetic man of intellect; he is not likely to live in a place where he has nothing to do. As a general proposition you would agree to that?—Yes; I think a man like that will go to where most life and work are to be found.

31398. Such a man would look for work to do?—Yes, and he would find heaps of it to do in this country.

31399. Now, if you buy from the landlord compulsorily or otherwise all the land that he possesses what is there that you can suggest for him to devote his energies to?—In the first place if you have a landlord, a member of an old family that has lived in the country for a couple of hundred years, I think he ought to have a taste for stopping on and improving the place known to him as his old family home. I think he should take a very great interest in elevating all the people round about him, and so on. If he lived in County Leitrim he would find a great deal to do ready at his hand.

31400. Many landlords are fond of farming in their own way?—Yes, and taking one instance, I know of a landlord who has devoted a vast deal of time to daffodil culture. Let a man develop any taste, and he will find plenty of opportunity for cultivating it. It is only a man with a want of intellect or energy that won't find enough to do.

31401. But even for daffodil culture you require some land?—Yes, but we are supposing he has not given away his acres, and the family home remains to him.

31402. Would you be disposed to agree that in order to retain landlords in the country that a certain amount of land on which they could do these things should be left to them. You would not be disposed to agree to the compulsory purchase of land right up to the front door of the landlord's house?—I should be reluctant to let them have land from which they evicted tenants and left them to live or die on the mountains and morasses. In any case experience shows they never prosper on such land.

31403. Where would you draw the line?—I am afraid you would have to take up each individual case, and draw the line in that way.

* "The number of emigrants from County Leitrim who left Irish ports during the [calendar] years, 1901–6 (inclusive), was—1901—597, 1902—817, 1903—1,082, 1904—976, 1905—835, 1906—1,005." (Return kindly supplied witness by the Registrar-General.) It will accordingly be found that the exodus last year on the genuine population reached 1·54 per cent., about the highest percentage on record. Leitrim's inhabitants have now shrunk to about 64,000 in number.—J.M.

31404. You do not think any general rule could be found to apply in all cases?—I am afraid I have not devoted any thought to this matter at all.

31405. Would you be disposed to support any claim that might be made to acquire land within the demesne wall?—No, I would not, except the landlord was making no use whatever of his land and these lands were going back. But where there is untenanted land going to wreck and ruin, and people at the same time starving for want of land or means of subsistence, then I think it becomes a question whether the demesne wall should not be invaded.

31406. You mean there should be a committee of experts in the country side who are to decide whether the place was properly or improperly farmed?—No, I would not decide it in that way. But if ever that be contemplated—and I do not know that it is—I certainly think there should be a Court of Appeal of some kind.

31407. You agree with the general proposition?—Yes, that the landlords should remain in the country and spend their money here, and the more good men of means and leisure we have in the country the better for the country.

31408. And in order to achieve that object it would be necessary for the landlord to retain a certain amount of land?—Yes, and a large amount of land.

31409. Sir John Colomb.—I know that this is a thorny subject, but it is somewhat important, that of sporting, and if you are attracting men to remain in the country sporting has, at all events, an influence with the young men. Now, do you not also think that if men are to be induced to remain and spend their money in the country, that sporting is an attraction for them?—Yes, certainly.

31410. Game and fish looked at from a national point of view are a national asset?—Certainly, but I would not reserve it exclusively for the landlords, because if you do, the result, I think, will be that the game will deteriorate. If the landlord, for instance, has the total game rights of hunting hares and can go on tenants' lands for that purpose as he likes, do you think the tenant will have any hesitation in killing a hare any time he comes across one? But if the tenant and the landlord have combined rights I think that would be a great advantage, because you are not excluding the tenant. Rural life, compared with town life is dark enough, and a great many people have a taste for hunting, and I think they should be allowed to indulge it.

31411. Mr. O'Kelly.—You answered Sir John Colomb that game is a national asset?—I may not fully understand the question. I should like to have a definition of national asset.

31412. Sir John Colomb.—Take the case of salmon fishing. That industry affects the riparian proprietors and the general welfare of the country. Do you propose that where a landlord had a salmon river passing through his land, and the land passed to the tenants, that then the exclusive right of fishing and preserving the river should cease to be the landlord's?—I should say that it would be far better that that exclusive right should cease, and that the tenant should be allowed an interest in the river and so be induced to assist in keeping up the fishing.

31413. Take the case of the property of a landlord who has a residence in the neighbourhood, and there is a salmon fishery going through untenanted land?—Perhaps I should simply say that the tenants have the first right to the salmon in the river going through their lands, and certainly the landlord should not go and grab all that right to himself.

31414. But the landlord now owns the property and exercises an exclusive right to the river and the tenants are not charged in any sense of the word for the river?—Well, in my opinion the tenants have quite as good a right to the river as the landlord. Of course the landlord took that and every other right he could gobble up.

31415. We were agreed on the desirability of attracting landlords to stay in the country, and I am now taking a concrete case to get your opinion. Before the sale of the land, the landlord has the exclusive right to a salmon river, but the property passes under the Purchase Acts into the hands of the tenants. The exclusive right of fishing has been in the hands of the landlord, and by the statutory terms of the agreement has been excluded from the tenants. Now when the property passes, do you propose that the tenants are to pay for their new right of fishing, or that it should be thrown in with the bargain of the purchase of the land?—My view is that since the landlord has the right, even his right is not to be confiscated. He has that right for, I suppose, the prescribed time, but he has that right, and it is a legal right, and he is not to be deprived of it. But, in my opinion, it would be much more wise for him to share that right with the tenants on some basis or other, because then he would get up a public spirit to preserve the fishing both for himself and all others. If that asset were run on economical lines it might be made a valuable property for the whole community.

31416. Do you mean that the landlord should have a right, but not the exclusive right, to fish, that the tenants and the landlord are to have the fishing rights amongst them, and that anybody can fish there who likes?—Decidedly not.

31417. I am glad to know that—what do you propose?—There should be some set rules so that anybody wishing to go there and fish must first get permission from some authority. Suppose the landlord and tenants had a committee and owned the fishing rights between them, then you would have the public spirit of the tenants trying to put down poaching for the sake of being able to fish there themselves when they got permission, and also in order that the fishing might be an economic benefit to the whole district. As things are they are running to riot. Of course it is now quite natural that any man who can get a fish takes it provided nobody is looking.

31418. Mr. Kavanagh.—You do not object to dual ownership in sporting rights?—They are not at all on the same basis, but on different principles altogether.

31419. Mr. Sutherland.—What you then want is a Board of Conservators, the same as there is in England, where the fishing is managed in the interests of the people and there is no question of private rights?—Yes, that seems to be what is wanted.

31420. Mr. O'Kelly.—Who derives the profits from the fishing?—As far as I know it is in the hands of some gentlemen in Sligo. At all events Leitrim people get no advantage out of it, except they nab an odd stray fish.

31421. Even in Sligo or Leitrim who derives the profits from the salmon fishing?—Well, I can only say that certainly it is nobody in Leitrim.

31422. Would you say it is anybody in Sligo?—I really am not aware.

31423. Do you know what the constitution of the Board of Conservators is?—No, I don't fish, and I know very little about it.

31424. Can you give any opinion on the matter?—My opinion on the subject would be very worthless.

31425. Do you know that the people along the Moy do not derive a particle of benefit from the fishing there?—I should expect they did not since the people along the river here do not derive any benefit from it, but if things were right they should derive some benefit.

31426. What description of things do you apply the right to?—That the people have the main right to all the fish that go past their doors. It is naturally God's provision for their food, and they should have it.

31427. Are you satisfied with the constitution of the authority that at present administers these matters?—I am decidedly of opinion that the rights of the people in the matter are in no way regarded. The natural rights of the people to these fish that go past their doors are utterly denied to them.

31428. Therefore you are not satisfied with the present constitution of the Conservators?—If the present constitution of the Conservators be of such a nature that this, which I describe, is legal, then I am decidedly against it.

31429. What are you describing?—Fishing on the Bonnet, on rivers about here.

31430. Mr. Sutherland.—Are you aware on what basis the right to salmon fishing rests in Ireland. Is it purely a prescriptive right?—All I know about it is that the people have no right to fish here, and if they tried to catch a salmon, unless they were very quick, they would get jail for it.

31431. Most Rev. Dr. O'Donnell.—Does this seem to be your view:—That game and fishing are great national assets in the sense that they could be made great and developed for adding considerably to the

Apr. 22, 1907.

Rev. Joseph Meehan.

resources of the nation?—Exactly. That is precisely what I mean.

31432. And to do that the best plan would be to transfer them to the occupier on reasonable terms of compensation?—Yes, at least in part.

31433. Mr. SUTHERLAND.—That is just my point. If there is to be a transference of the fishing there is no need to compensate the man who had no rights to begin with, and hence I asked what is the foundation of the salmon fishing rights in Ireland?—I have stated I am unable to say, but in the case put by Sir John Colomb I understood him to make out that the landlord had prescriptive rights, and, of course, in that case I would not confiscate his rights

31434. Sir JOHN COLOMB.—That is one of the things in property which is called an incorporeal hereditament, which is a valuable asset to owners. All I wanted to know is, if you are going to take those rights from the owner who is legally in possession of fishing in the river and transfer them to numerous people who live along the river would you compensate the landlord in respect of that?—I would look at his right, and if he had a long tenure based upon a good right, I would compensate him for being deprived of it.

31435. In depriving the landlord of a valuable and lettable asset would you give that to tenants who had never enjoyed it, for nothing?—If you come to look at what rights the landlord enjoyed originally I think the tenants have the superior right. I think it is based on natural right, and nothing legal can do away with natural right. That is my opinion.

31436. Mr. SUTHERLAND.—But surely the tenant has no more legal right than the landlord if they enjoy the same fishing. The fishing should be used in the interests of the general public?—If it be natural rights. If the people have the right to live and God Almighty sends fish past their doors, I think they should have the first claim to them.

31437. Take the case of sea fishing, you would never think of making a provision like that in that case?—They are in quite different positions altogether.

31438. I do not wish to argue the point with you, except to point out to you that if the landlords' rights to exclusive fishing are bad in the case of a salmon river then the rights of the tenants would be equally bad?—I do not admit that. The landlord wants the right to sport, but the tenant wants the right to live.

31439. Sir JOHN COLOMB.—This is not a case involving the question of the use by public and the preservation of the fish. In that case in England there would be boards instituted for the purpose of regulating the fishing, and any income would go to the rates, and everybody would profit by that. If in this case the fishing is a natural right, would that not include the right of everybody to fish and not merely those who happened to have holdings bordering on the river. If you base the right to fish on natural rights, then why should the man who has a holding bordering on the river have the right to fish and the man with a holding not bordering on the river have no such right?—If that argument is to hold good, then it would also be the natural right of the French, Dutch, and Spanish to come within the three miles limit of the Irish coast and fish as they liked.

Mr. SUTHERLAND.—No, that is a conventional regulation.

Witness.—Naturally the people living along the shore have the first right to the fish.

Mr. SUTHERLAND.—Oh, no.

31440. CHAIRMAN.—Is there anything else you wish to mention to the Commission?—The last point I wish to put before the Commission is in regard to the question "What changes are suggested for bettering the people of the congested areas in Leitrim?" There are a number of points I want to bring forward. The first is that of railway making. I presume that the Congested Districts Board would not have funds to do railway making itself, but it should do as it did in the case of the Killybegs Railway, that is, get the Government to grant a sum of money for the making of the railway. That seems absolutely necessary for the betterment of particular parts of the areas entrusted to their charge. That is the principal need of the district I belong to. It was also the opinion of Mr. Tuke that the best thing for the improvement of congested districts was the making of railways and other means of communication. The case for the railways is made in an article I happen to have written for the *New Ireland Review*,* and I will hand in a copy of the article.

31441. Mr. O'KELLY.—You say in your memorandum of evidence, "Let it be clearly understood I do not favour confiscation—righting wrongs by other wrongs." Will you kindly explain what you mean by that language?—Suppose you decide to carry out migration, and that a man has a large farm which he has held for a number of years, and which could be utilised for the easement of congestion, I decidedly would not advocate taking that farm from that man unless it were obtained at a fair valuation.

31442. Would that be a wrong?—To seize upon a farm and take it would certainly be a wrong.

31443. I want to understand what you mean by saying you would not be in favour of righting wrongs by other wrongs?—The other wrongs to which I refer are the wrongs which were inflicted upon the tenants of the country by confiscating their property and driving them to the morasses and mountains: and by piling on rents whenever the tenant was seen to be strong enough to bear it.

31444. I am afraid we are getting away from the subject. You say "Let it be clearly understood I do not advocate confiscation; I do not commend righting wrongs by other wrongs." What other wrongs do you object to?—In my opinion, it would be a wrong to take from a man a large farm even if he did not need it without giving fair compensation for it.

31445. Quite so; but did anyone ever suggest taking a farm from a man without saying that fair compensation would be given for it?—Never, but it is well that our ideas on the subject should be perfectly clear.

31446. I quite agree; that is why I put the question?—I wrote that pretty hurriedly, and it may not be as clear as I should wish it.

31447. Did you ever hear a Nationalist Member of Parliament or any man on a public platform in Co. Leitrim suggest that if a grazing farm should be taken for the purpose of enlarging or improving the holdings of the small men, that they were not quite prepared to give full value for the land so taken?—No, never.

31448. And so there is no case in Co. Leitrim where righting wrongs by other wrongs was ever exercised?—Never to my knowledge.

31449. Therefore I dare say that sentence of yours is purely academic?—No, I do not know that it is that.

31450. I mean in relation to the actual facts of public life in Co. Leitrim?—The sentence is put in in order to enable us to have clear ideas on the subject.

31451. Then, again, you say†: "Personally I accept the situation, and I only urge." What situation do you accept?—As things are. You have numbers of tenants living ——

31452. I know, but might I suggest to you it is rather apologetic in the way you put it. Do you mean you are sorry for the present position?—I am utterly sorry, and thoroughly sympathetic with the tenants. I think no people in the world have suffered such wrongs as I know them to have suffered in my own parish.

31453. What is the meaning of "personally I accept the situation?" Doesn't that suggest that the situation that existed before would be more commendable in your view?—I am afraid not. I am afraid you and I are rather disputing all along on points of rhetoric, and not on points of fact.

31454. What do you mean by accepting the situation? You do not mean that you are sorry that the tenants have got a grip of the land?—Decidedly not. I am delighted that they have, and I think that is entirely due to their own exertions and the exertions of their leaders in Parliament.

Mr. GEORGE HEWSON examined.

Mr. George Hewson.

31455. CHAIRMAN.—You have been asked by the Landowners' Convention to give evidence here?—I have.

31456. You are a landowner in this district?—I am.

31457. What is the size of your estate?—I own about two thousand acres.

31458. Tenanted or untenanted?—All untenanted.

31459. Do you farm that principally?—I farm a good deal of it. The bulk of my land is mountain, and I keep Scotch sheep on it.

* See *New Ireland Review*, May, 1907.

† See Appendix V., p 259.

31460. You have no tenanted land at all?—Not in Leitrim.

31461.—Sir JOHN COLOMB.—You are also a considerable land agent?—Yes.

31462. CHAIRMAN.—What is the first point you wish to make?—That a blot in the present system is the present classification of congested districts. There are slums in Kildare and many other counties which want re-settling and re-adjusting as much as any other part of Ireland. The great tendency of the Congested Districts Board is to spend money on places which have in the past been advertised, to the exclusion of less known districts, where help may be wanted just as much. The time has not arrived for the transfer of the duties of the Congested Districts Board to the Land Commission. The latter has a great deal more to do than they can do, and any addition to their duties would probably lead to great confusion. In order to get districts properly represented, the Board might be increased by, say, three members, and half the Board should retire by rotation every three years, and not be eligible for re-election for a further period of three years. The outgoing members might be replaced by persons from different districts, and this should insure the wants of all districts being ultimately attended to. The Board would be the better of a small *ex-officio* element, which might be composed of those members who have been the best attendents at committee meetings since the creation of the Board.

31463. CHAIRMAN.—You mean by *ex-officio* members honorary members?—Yes. A great many members appear to attend every meeting of the Board, and the Board would be much at a loss without them.

31464. You would not allow them to retire?—No.

31465. Mr. O'KELLY.—You say half the Board should retire and not be eligible for re-election for three years. I suppose you are aware that the work of the Congested Districts Board is a highly technical work?—I think it is more practical.

31466. It is highly practical work?—Yes.

31467. I suppose you will agree that it is both practical and technical?—Yes.

31468. How long do you think it would take a man after joining the Board to understand the business of the Board?—If an intelligent man, I do not think it would take him very long. In addition to that the new members would be kept straight by the old members.

31469. Do you think it wise that just when a man had learned the technique, and had acquired a knowledge of the Board's work that then he should be disqualified from further service?—My object is to get the various congested counties represented on the Board.

31470. Do you think it wise to have a representative from each county?—Not from each county, but men from Leitrim, Clare and Mayo for one term. When these men had served their term of three years, and had seen that all the wants of their respective counties had been attended to to a certain extent, they would be replaced by men from some other counties.

31471. Have you any reason to be dissatisfied with the present personnel of the Board?—Not at all.

31472. Then why are you suggesting a change in the constitution of the Board?—Because I think the present personnel of the Congested Districts Board have very rightly and properly looked after their own districts very well, and other districts require the infusion of local blood to get their interests looked after.

31473. You say that the present members have looked after their own districts. Have you got any data to substantiate that statement?—Yes, I have, for instance, the Swinford district, which has been exceedingly well looked after, and exceedingly well worked. I think it is perhaps now time that the Board moved on elsewhere.

31474. Do you think that is due to the membership of Father Denis O'Hara, or due to the great and urgent need of the people living there in very great congestion?—I think that Father Denis O'Hara lived in that district, and knew the needs of the people and urged them perfectly rightly, and I wish there was somebody from here to do the same.

31475. Don't you think if there was somewhere outside Connaught so much steeped in poverty as Swinford, that Father Denis O'Hara would do as much for it as he has done for Swinford?—I am sure he would, but he has not got the local knowledge. I do not suggest for a moment that Father Denis O'Hara should retire from the Board, but I suggest some three members should be added.

31476. That leads us into a very big question. Do you think that the Congested Districts Board have paid so much attention to Swinford Union simply because Father Denis O'Hara belongs to that district, or simply because of the urgent needs of the district?—Both. I think Father Denis O'Hara on the Board urged the urgent needs of that district very properly, and I should like to see somebody from this part of the country on the Board to urge the needs of this place also.

31477. Suppose Father Denis O'Hara was not a member of the Board, do you think Swinford would have been neglected?—No, but possibly the Board would have begun with Leitrim if we had had a representative there.

31478. You won't be surprised to hear that long before Father Denis O'Hara was there at all a great deal was done for Swinford Union?—Yes, I know that—a great deal.

31479. Sir JOHN COLOMB.—Have you a personal knowledge of Mayo and other counties?—I have.

31480. CHAIRMAN.—Don't you think that a system of having men on a public board like the Congested Districts Board to a certain extent representing districts would lead to a division of the Board's funds?—A division or a diversion?

31481. Division and diversion?—Yes, quite so, and I should like to see that, because I think when you have thoroughly looked after a district as Swinford has been so thoroughly looked after, it is time to move on.

31482. There are eight congested counties, and do you think it would be a good thing to give each of these counties so much money no matter what the peculiar necessities might be in any one of them?—No, I do not think so.

31483. Would not that be the effect of having representatives from the different counties on the Board?—No, I do not think so. You must go in some sort of order. You could not change all the congested districts in Ireland at once. If you like to do the thing without any suspicion of partiality put the names of the different counties in a hat, and take them up one by one.

31484. That is assuming that each congested county is as badly in need of funds as another?—Personally I think certain districts are.

31485. Can anybody judge as to that except those who have all the details of the questions before them?—Quite so and that rather accentuates my point. If you have these three extra members on the Board who will retire by rotation, the claims of all the districts will be brought before the Board. The gentleman from Leitrim, for instance, would urge the claims of his county, and they would be thoroughly attended to by the Board. That is my point.

31486. Don't you think your object could be best attained if the Board were to hold a sitting more often than they do in the congested localities?—Possibly this would be of use, but the object would not be so well attained, as by having a representative from the county who thoroughly knew the county, and would urge its claims.

31487. Sir JOHN COLOMB.—Represent each congested county in turn on the Board?—Yes, that is my suggestion.

31488. CHAIRMAN.—What is the next thing you wish to say?—It is as regards the areas outside scheduled districts that ought to be dealt with as congested. All electoral divisions where there are fifty families or more whose average agricultural rent does not exceed £5, or whose holdings do not exceed ten acres, should be provisionally declared congested. The Board officials should by degrees visit these places, and make short reports on which they could decide whether they should be finally declared congested or not.

31489. Mr. O'KELLY.—What do you mean by provisionally declared congested?—I mean that you could get to know in certain districts whether there are congested spaces, and they should report to whoever the authority is that these slums—to use a short word—want re-adjusting, and they should be put on the schedule. Put it that way if you like.

31490. CHAIRMAN.—What is your opinion on schemes of migration?—Any question of migration

Apr. 22, 1907.
—
Mr. George Hewson.

must depend on whether the lands to which migration takes place are situated in a district where the habits of the occupier are of a similar nature to those of the migrant. You might as well bring a Meath man to live in Connemara, as bring a Gweedore man to live in Roscommon. Part of Roscommon could, perhaps, be suitably used to relieve congestion in that county, and there are large tracts in Mayo which could, no doubt, be bought to enlarge holdings there.

31491. Mr. O'Kelly.—Of course you know County Donegal?—Yes.

31492. And Connemara?—I do know it, but not very well.

31493. Whom have you in your mind when you speak of the Gweedore men?—I have any man who lives in a congested district, who has plenty of turf, seaweed, and mountain grazing; if you bring him to Meath he goes to an absolutely different class of life to that to which he is accustomed.

31494. But you talk of bringing him to Roscommon?—Yes, exactly the same thing applies there too. Their habits and nature are quite different, and you cannot successfully bring men from a country where they have had turf, etc., to a country where they will have none of the accessories to which they are accustomed.

31495. Who is the Gweedore man you have in your mind?—I mean a West Donegal man, if you like.

31496. What type of man is he?—Some of them live on a bog holding and others a holding along the sea shore. These people have large rights for grazing sheep and seaweed for their manure.

31497. Take the bog man?—He is the man who lives on a bog holding. He lives beside his turf; he has a grazing run for sheep, and seaweed for manure. All these things are to his hand, and if you transplant him to Meath you transplant him to a new country.

31498. Suppose he got a farm in Roscommon, why should he not be able to work it?—My opinion, for what it is worth, in the first place is, that he would not go.

31499. But assuming he does?—Assuming he does, then you land him on a farm in Roscommon where the ways of the people are absolutely different to his own ways. He has no turf and no water, and he has to look after a class of cattle he is not accustomed to.

31500. What do you mean by saying no turf or water?—Well, the bulk of the farms from, say, Carrick to Elphin are miles from bog.

31501. What I want to get at is would the man be so deficient in the knowledge of agriculture that he would not be able to work a farm there?—I do not suggest that, but I think he would rather be where he is than in a country which he does not know. The class of agriculture and the quality of stock is so different in these districts that I do not think a man removed from West Donegal to Meath or Roscommon could adapt himself at once to the altered circumstances unless he got assistance and instruction.

31502. You mean that he would be better steeped in congestion than go to where he could make a better living?—It is altogether a problematical matter if you can improve him.

31503. Then you say part of Roscommon would be suitable to relieve congestion in that county. Now, don't you think if you transplanted a family from Donegal to Roscommon, the head of the family having a knowledge of agricultural work, that they would get on well there?—I rather doubt it.

31504. What is the basis of your doubt?—The basis of my doubt is that life is absolutely different in Roscommon to life in Donegal. A Donegal man going to Roscommon would have to start afresh as if he was in a foreign country.

31505. Mr. Sutherland.—But all these disadvantages would occur in a greater degree in a foreign country?—Not in a greater degree, because in a foreign country the immigrant would probably get virgin soil and he would not be going into a place where the people were so absolutely different from himself.

31506. Mr. O'Kelly.—Then in your opinion a Donegal man would have greater difficulties going to live in Roscommon than if he emigrated?—I think it would be as difficult for him, at any rate.

31507. What class of land could you put him on there. Isn't there a great part of it what you have described as virgin land?—I do not suggest he should be put there, because I do not think he should.

31508. But suppose he is?—Suppose he is, I do not think he would get on.

31509. Why? Because he does not understand agriculture?—No. Because he does not understand that class of agriculture he would have to take up to keep going.

31510. What class of agriculture is that?—I understand he would be put on a holding of twenty-eight acres——

31511. I want to know why a man migrated from Donegal to Roscommon, a man who is able to make a living on the bogs of Donegal, why it is if that man got a good farm in Roscommon he could not make a living out of it?—I have not said that a man can make a living of bogs. I do not think he could.

31512. But if he is living on bogs it must be assumed that he makes his livelihood on them?—As a matter of fact, he does not. The man who lives on the bogs sends most of his children to Letterkenny hiring fair, turns his wool into cloth, and makes his own clothes, and lives there very cheap. His bog holding is merely a kind of accommodation letting—that is the only way in which I can put it.

31513. You know Roscommon very well?—I do, fairly.

31514. You know the man who occupies a fifteen to twenty acres holding?—Yes.

31515. Suppose you have a surplus of land in Roscommon why not migrate men there from Donegal, bearing in mind that the man from Donegal has a sufficient knowledge of agriculture to enable him to work the new holding he gets to advantage?—We were taking the Gweedore man as a type, and I do not think that that man has sufficient knowledge of agriculture requisite to get on in Roscommon from the first.

31516. Most Rev. Dr. O'Donnell.—In answering that question do you bear in mind that this man from Gweedore has gone as a young man to serve his apprenticeship in a very good agricultural district?—Yes. Very many of them do.

31517. Would that modify your answer to Mr. O'Kelly?—I do not think so, because, as I have said before, they are being sent from their own district to an absolutely different country.

31518. But on the mere score of knowing tillage?—On the mere score of knowing tillage I do not think there are any better farmers of their class than the industrious Gweedore man, who has fairly decent land.

31519. Chairman.—You admit that there has been no case at least that you know of where a man has been migrated in this way and has failed?—Well, I will tell you a rather curious case that I came across in County Donegal the other day. I saw when going over a townland there the names of a number of Leitrim men. It is a very well circumstanced estate, and these men, who had all come from Leitrim to Donegal, are all exceedingly poor, and they are called by the Donegal men planters.

31520. Were they moved there by the Board?—No, but as herds for these farms.

31521. They had not been put there on holdings arranged for them by the Board?—No.

31522. Do you know of any case where a man failed who has been moved by the Board to a holding which, in the Board's opinion, was economic and under conditions which the Board thought were favourable to him and would enable him to make a living?—Not where they have been moved from a distance, but I know of other cases. I do not know of any case where persons have been moved from one county to a new farm on another, and I cannot say whether they have failed or not.

31523. Therefore it is purely a matter of opinion. You have no actual case of experience to quote of a Donegal man who moved to Roscommon and failed?—No actual case, except a knowledge of the different classes of the two counties.

31524. Do you know of cases where men have been moved from a bog holding in a county to a grass holding in the same county?—I do.

31525. Do you know that in these cases many of them have succeeded perfectly well?—Many of them have.

31526. Is there any difference so long as the grass land is more or less of the same quality whether a man is moved to a grass holding in his own county or not? Is there any reason why a man moved to a

grass farm in the county he belonged to should succeed, but if moved to another county he should fail?—I think there is. The people are very clannish in this county, for instance.

31527. Then failure would not be due to the man himself, but to the attitude of his neighbours?—That is possible. I do not think he would be welcomed with open arms, and in the second place the style of agriculture in different parts of Ireland is so absolutely different that you cannot guarantee that the migrant will succeed.

31528. I do not think you quite understood my question. Take the County of Sligo, for instance. It has many grass lands very much like the grass lands to be found in Roscommon. Now, if you take a man from a mountain holding in Sligo and place him in a grass holding in County Sligo and find that he succeeds there, is there any reason why a man taken from a mountain holding in Sligo should not succeed on a grass holding in County Roscommon?—I think there would be much more chance of success in the case of the Sligo man moved to Roscommon, where the habits and class of farming in these two counties are much the same, than there would be for the Donegal man moved to Roscommon.

31529. If you find in both cases the quality of grass land is about the same, and you have experience of success in the first case, is that not a presumption for success in the second case?—Assuming that all the conditions are equal, yes. But if you bring them from a distance, and put them on quite a different class of land to which they have been accustomed, I am not so hopeful. You do not know what certain classes of grass lands are going to do for you.

31530. Leaving Donegal out of the question, is there any reason, in your opinion, why a man from a mountain district in Sligo, Mayo, or Galway should not succeed in the grass lands of Roscommon?—I should group Sligo and Roscommon, if you like. I do not see any reason why they should not succeed in that case.

31531. Won't you group parts of Mayo also?—Well, Mayo, as far as Tubbercurry.

31532. There is very little difference?—Quite so, but you have to know the country to get the type, and where they change. I do not think if you brought a Belmullet man to Tubbercurry he would be quite the same person. If you bring a man from a turf country, where he has always had fuel, you must put him into a country where he will get fuel.

31533. Mr. O'Kelly.—In the case of the Belmullet man, why not?—Because the Belmullet man is accustomed to a type of cattle you have not got in Roscommon.

31534. Chairman.—You assume that all these small farmers have turf?—The bulk of them in congested districts have it in one way or another.

31535. Do you know that in the Islands of Lettermore—for, although connected by causeways, they are really islands—that turf is non-existent, and they have to buy it?—Yes, they bring it over in lighters in exactly the same way as the people of Tory Island do.

31536. If they buy their turf, in that case, is there any reason to prevent the men moved to Roscommon buying it?—For people who are accustomed to it it is a much simpler thing to bring turf by boat than to go thirty or forty miles for it and cart it.

31537. It is a matter of supply and demand?—It is a matter of custom, where you had got it and where you had to buy it.

31538. It only means that the Roscommon man has got a new source of supply. Now suppose for the sake of argument that you break up a great deal of these grass lands in Roscommon into thirty-acre farms, and there was no turf on them, do you think a turf industry would not spring up and that some adventurous individual would not endeavour to supply these people with all the turf they wanted?—I do not think so, or he would have to supply it at such a rate that these people would not pay for it.

31539. Have you anything further to say on the question of congestion?—The problem of congestion as a whole can never be solved. The difficulty may be mitigated by migration in a small way, and the Board might also be given the right of pre-emption, as can be at present exercised by landlords. This, if judiciously used, might in some cases enable small holdings to be amalgamated. The Board should undertake main drainage in congested districts. Establish a bureau which would give all information as to employment to be got in England, Ireland, and Scotland. Small holders should be encouraged to shovel their drains in the winter, and the standard of cleanliness should be encouraged as far as possible. Subdivision should be strictly prohibited by law. Generally the great want is the circulation of money. Now that the landlords, who were more or less a spending medium, are gone, their place must be taken by somebody who will spend money for the general good.

31540. Mr. O'Kelly.—Give me your reasons for saying that the problem of congestion as a whole can never be solved?—My opinion is concerned with congestion *quâ* congestion. To begin with, the people won't migrate in shoals. There is not enough proper land to go round, and the problem of congestion, if it is to be solved at all, must be solved on the spot with the circumstances you have in your hands, and nobody can do that like the Congested Districts Board.

31541. You say the people won't migrate?—I do not think they will.

31542. Give some fact that will substantiate that statement?—I merely make the statement from my knowledge of the people.

31543. You make the very definite statement that the people won't migrate, and I want to find out your reasons. Have you any experience?—My reasons are my knowledge of the people, their habits, and my conversations with them.

31544. Have you any concrete case where the people have refused to migrate?—They have never been asked; it has never been said to them, here is a farm in Meath, will you go?

31545. Have you a case where the people have refused to migrate to any other district?—No.

31546. Therefore your suggestion is merely hypothetical and theoretical?—It is a pious opinion.

31547. It is not founded on actual experience, but is merely an opinion which you advance?—No.

31548. Well, I think the people would be only too willing to migrate if they got fair play. You say "Now that the landlords who were more or less a spending medium are gone." They are not all gone yet, but spending where?—Well, the fashion is to say that all landlords are bad, but I suggest that in a great many places the landlords spent money on their property and circulated money, and I say the Congested Districts Board should take the place of these landlords, take up main drainage and do the work that would have been done by a good landlord.

31549. There were a number of landlords spending their money at home. Are there many in County Leitrim?—When I came to the county there were comparatively a great many to what there are now.

31550. When might that have been?—Twenty-five years ago.

31551. Twenty-five years ago the landlords were spending their income on improving all their property and their tenants?—I say they lived in the county and spent their income in the county.

31552. How many are there at the present time living in the county and spending their incomes in it?—I can give you a return.

31553. Approximately, are there half-a-dozen?—Quite, and over it.

31554. How many absentee landlords are there?—I am afraid there are a great many.

31555. I am afraid there are a great many, too. What were they spending their money on?—On drainage and improvements, and they kept servants and money was circulated.

31556. What did they do in the improvement of their property?—I act for a landlord in Leitrim who spent very large sums in the improvement of an estate between this and Kiltyclogher, and even since the Land Act of 1881 I have personally, both on my own behalf and of my employers, planted over 100,000 trees, and spent a good deal of money in one way and another.

31557. Was that money borrowed from the Board of Works?—No.

31558. It was spent out of the landlord's capital?—Yes.

31559. Any part of it chargeable on the tenants?—No.

31560. Most Rev. Dr. O'Donnell.—The trees would not be planted on tenanted land?—No; I am merely giving instances how money was spent in the country. One gentleman, Mr. Wynne, spent £18,000 in the

Apr. 22, 1907.

Mr. George Hewson.

railway for which he got no return. Mr. George Marsham also spent £3,000 on the same work.

31561. CHAIRMAN.—Have you any general remarks to make regarding County Leitrim?—The Congested Districts in this county are not similarly circumstanced to those in other counties. There is no fishing population, and there are comparatively few large farms let on eleven months' system, hence there is not much untenanted land suitable for migration, and practically none suitable for the enlargement of small holdings. The Congested Districts Board have done very little for this county, no doubt owing to their energies being employed elsewhere. Most of the families in the congested districts have relatives in America. The rents of the holdings in the congested districts is not an appreciable factor in the occupier's yearly budget, but the system of dual ownership has (owing to legislation which did not go to the root of the question) become impossible. Owing to the conditions of agriculture, most farmers find it pays better to graze than to till land.

31562. Sir FRANCIS MOWATT.—You say that the system of dual ownership has, owing to legislation, which did not go to the root of the question, become impossible. Will you develop that?—The old cry that absentee landlords were the curse of the country was looked upon as the right one, and instead of trying to put a stop to that all legislation since 1881 has intensified that and has tended to drive the landlords out of the country and create a state of affairs in which the tenant has more interest in the land than the other party, and therefore we must go back to bedrock, and the only way is to purchase.

31563. To get rid of either the landlord or the tenant?—Exactly. The tenant hopes to get his rent reduced at the end of fifteen years, and therefore is not particularly anxious to improve his holding, and the landlord is only a rent charger, and cannot now be expected to spend money on improvements.

31564. Mr. O'KELLY.—Going to the root of the question would suggest compulsory purchase?—I do not think so.

31565. Do you mean that the landlord should have the power to evict, or that the landlord should disappear?—That he should disappear.

31566. But if the landlord is unwilling to disappear and you wanted to go to the root of the question, what remedy would you apply?—I do not think the landlord would be unwilling if he got a fair price.

31567. But assume that he is unwilling?—Show me a case where he is unwilling to disappear, and I will tell you.

31568. I want to find out what you mean by going to the root of the question?—What I mean is that the legislation which, especially in congested districts, gave a man 2*s.* or 3*s.* reduction in the £1 and nothing else, was no good.

31569. I do not think that is an answer. What do you mean by going to the root of the question?—I think the root of the question is what the Congested Districts Board are trying to do now, that is raise the status of the occupier, to raise his standard all round, and to encourage him to make the most of the opportunities he has at his hand.

31570. CHAIRMAN.—Is there anything else you wish to bring before us?—It is impossible to say what area, or what valuation, ought to be held by each small occupier. It depends on the size of a man's family and his industry. There is practically nothing done in this county with regard to giving occupiers new holdings. As to whether the introduction of strangers from a distance would be acceptable to present occupiers in the same district, the only case I know of is that of the Dromard farm near Mohill. This was bought by some philanthropists to provide houses for the Massereene tenants. The latter were not allowed to come near the place, and the land had finally to be given to natives, who, by the way, have cut down all the timber. Occupiers of congested districts would, in a few cases, if there was land vacant, no doubt go to farms ten to twelve miles off if let at a moderate rent; they would, of course, require houses and offices built for them, and they would require money to stock the farms if they did not sell the interest in their present homes. I doubt if there is sufficient suitable untenanted land in Leitrim to put up more than 100 families at the outside.

31571. Mr. O'KELLY.—In what electoral division is Dromard included?—In Mohill.

31572. Is it scheduled or non-scheduled?—I am not sure.

31573. Are there any uneconomic holdings in the Mohill division?—Oh, plenty.

31574. Anyway the people of Dromard resented the migration of people from a distance?—Yes.

31575. Was it because the people of Dromard said that their condition was not a bit better than the condition of those whom it was proposed to migrate, and that they had a prior claim?—They said they had a prior claim to the land.

31576. Was their condition any better than the condition of those whom it was proposed to migrate?—I do not know what was the condition of the people it was proposed to migrate. They were evicted tenants on the Massereene estate.

31577. How many of them were there?—I do not exactly know, but, as a matter of fact, part of the Dromard farm was let to people who lived in the town of Mohill.

31578. Supposing the farm had been divided among strangers, what land would have been left available for the improvement of the people who lived on the Dromard estate?—There was no land left.

31579. That is my point. Do you think it was reasonable to bring in people from a distance and give over to them a farm which was needed locally, and so stereotyped the congestion of the people of Dromard for all time?—I do not give any opinion. I do not know what induced them to bring these people there.

31580. Do you think the people locally were justified in resenting congestion being remedied in one district for the purpose of perpetuating it in their own district, congestion being remedied in a district at a distance at the expense of the local people?—But it was not congestion. It was the case of people who were evicted tenants.

31581. In any case, the philanthropically-minded man did not succeed?—No.

31582. You also say that the land was given to the natives, who cut down the timber?—Yes, unfortunately.

31583. It was their own, was it not?—Of course.

31584. You have no objection to people doing what they think right with their own property?—None whatever, but I think it is a pity that the timber was cut down.

31585. Mr. KAVANAGH.—Do you think that if this migration had been carried out by a public board like the Congested Districts Board it would have made any difference?—I do not think so, because the suggestion was made by people who would have had as much chance of success as the Congested Districts Board.

31586. CHAIRMAN.—Have you anything else to say about migration?—Yes. I do not anticipate that for years migration could be carried out on a sufficiently large scale to make any appreciable difference in the store cattle trade. If a serious attempt to prevent graziers taking grass lands was successful, it would certainly interefere largely with the store cattle trade, and once this was driven away it would be very hard to restore it. If the small tenants got "economic" holdings they would probably follow the example of their larger brethren and till as little as possible. The modern style of education makes the young disinclined to work land. Those with energy go to a foreign country; others look out for a job in this country; very few take to farming, and especially tillage farming, for the love of it.

31587. Mr. O'KELLY.—Do you consider the graziers necessary to the economic condition of the country?—I think a large infusion of them is.

31588. Could we do without some of them?—You could do without some of very nearly everything.

31589. It was suggested to this Commission that if the grass lands were divided among the people that they would be able to do for themselves what the graziers are doing now: that they would be able to finish their stores, and in that way do away with the middleman's profit, which is the grazier's profit. Do you agree with their view?—I do not.

31590. What is your ground of difference?—First of all you have got to have on the farm a cow which in a dairy country rears a calf, and if a good farmer feeds that calf he will get £7 or £8 for it when it is a year old. I do not see how a man with a twenty-acre holding, half of which is in tillage, is going to keep a calf and stores until two-and-a-half years old. He has not got the room.

31591. Do you think it is possible by a different system of farming for a small man to finish his own stores?—I do not think so. They do not do it in tillage counties at present.

31592. May it not be done in Ireland?—It is not done in Ireland in any place where that class of holding exists.

31593. Don't you think the grazier is the middleman making a middleman's profits?—So is the man who breeds the calf. The only one who is not a middleman is the man who eats the beef.

31594. I see you also refer to education. What do you mean by the modern style of education?—Where the children sent to the National Schools learn about the waving fields of South Africa and to play the piano.

31595. CHAIRMAN.—What is the next matter you wish to deal with?—I want to say that creameries are the principal industry started in this county. They have their good and bad sides. The good side, that proper butter is made, when before the small farmers had not appliances to make it. The bad side is that a source of employment has been taken from the women, and nothing put in its stead, and that, undoubtedly, the breed of cattle is deteriorating from the want of proper feeding of calves. In congested districts in Leitrim, where tenants have mountain grazing rights, much could be done by draining and fencing these mountains, and, incidentally, enhancing the value of sporting rights. Planting is also largely required. There is a considerable quantity of coal, flags, and iron ore in the Arigna district which cannot be properly worked for want of easy access to a port; an outlet to Sligo would most likely largely develop the resources of that country. The Arigna Mining Company was started some years ago by a few others and myself.

31596. Sir FRANCIS MOWATT.—You mention a mining company. Is it a coal mine?—Coal and flags.

31597. Sir JOHN COLOMB.—Is it working now?—Yes, and near Drumkeeran some enterprising gentlemen are also working coal mines, but they are very much handicapped for want of means to get the coal away.

31598. That is their difficulty?—That is their difficulty and our difficulty.

31599. CHAIRMAN.—What is your next point?—That I have advised several clients to sell outlying farms in other counties.

31600. What is the point of that?—Merely that it is stated that the landlords have been unwilling to sell. I would like also to say that the late Right Hon. John Wynne spent large sums squaring farms, making roads, planting, etc., in Counties Sligo and Leitrim. The present Mr. Owen Wynne has done much planting, and spent a large sum in opening up backward districts with a new railway. I have on behalf of owners expended considerable sums in drainage, etc. An uncle of mine altered the whole face of a district in County Kerry in the seventies, squaring farms, putting up buildings, etc.

31601. Mr. O'KELLY.—Did Mr. Wynne make the railway?—Forty-two miles of railway were made. The money was raised by local guarantee, and he spent £580 a year over it for very nearly twenty years, and for that he never got a penny. Three or four other landlords practically took the place of guaranteeing baronies.

31602. Is there any prospect of their ever getting any of their money back?—There never was any prospect of their ever getting a copper back.

31603. Most Rev. Dr. O'DONNELL.—Did some of the occupiers join in that guarantee?—I do not think so.

31604. I was speaking to one yesterday who said he did?—I think he must be a landlord.

31605. He belongs to Ballintogher?—I think I know the name, but he is as much a landlord as an occupier.

31606. CHAIRMAN.—Has not all that railway scheme been rearranged?—Yes, it was swamped with a paper capital which we reshuffled altogether, and the guarantees expired last year. The line was financed at the time of the Glasgow Bank smash, on bad lines, *i.e.*, by paper instead of sovereigns, and these people had to pay on their guarantee.

31607. It is now arranged with certain blocks of debentures?—It is just in the same way as certain classes of stock on other railways, and is doing very well now.

31608. Most Rev. Dr. O'DONNELL.—As regards the fixing of rents, don't you think the rents would have been very much lower along that line if the railway had not been built?—When I mentioned that fact to the Commissioners it was always jeered at. I do not know whether they take the railway into account or not. It never appears on the pink schedule.

31609. CHAIRMAN.—What is the next thing you wish to tell us?—I may say that on small properties on which I am agent for the last ten years I have received the year's rental one year with another in Mayo, Leitrim, and Donegal. As an investment I would rather have a large property of small holders if fairly circumstanced than large tenants. In the latter case, if a tenant is insolvent the loss incurred by his failure is much greater than by the failure of a small tenant. On many congested estates for which I have been agent I have almost invariably collected the year's rent one year with another except under special circumstances. The fact of arrears being allowed to accumulate is generally the result of mismanagement.

31610. Mr. O'KELLY.—That is a grazing ranch?—No, that is a different thing.

31611. CHAIRMAN.—The next point is?—I do not think that the price at which the Board has bought can be taken as a basis on which they can expect to buy other estates. The Board get cheap lots of what may be called bankrupt stock, but there is no reason why others who do not wish to sell, except for public reasons, should be compelled either directly or indirectly to accept such prices.

31612. Mr. O'KELLY.—What do you mean by public reasons?—Reasons for the public good—to change the occupier into the owner.

31613. Do you think many of the landlords would subscribe to your views on that point?—I am perfectly certain that they would be prepared to sell at a fair price.

31614. What do you mean by a fair price?—At a price that will not involve them in too much loss.

31615. Have they accepted a price that would involve them in any loss?—Yes, I have done so myself, unfortunately.

31616. Under the Act of 1903?—Yes, I have sold very nearly thirty estates since the Act of 1903 was passed.

31617. And the result was a loss to the landlord?—Yes.

31618. In how many of the thirty cases?—I will send you in a return if you wish it.

31619. I would rather you gave it now if your memory can help you. In how many of the forty estates has the landlord suffered by the sales?—There are six estates that I have actually got through, and certainly in four of them the landlord has suffered.

31620. Then you have not sold forty estates?—No, but I have lodged agreements for the sale of so many estates.

31621. Out of the six sold you have had four losses?—Yes.

31622. Notwithstanding the bonus?—Yes.

31623. CHAIRMAN.—By loss you mean that the landlord is left with a reduced income?—Yes.

31624. Mr. O'KELLY.—In what did the loss consist?—Well, the landlord investing his money at trustee rate got less than the average net rental.

31625. What percentage did he get?—About 3½ per cent. I will send you in a return if you wish.

31626. This is very important. You say that out of the six estates you sold you had four losses, and that when the landlord invested his money the return at 3½ per cent. was less than the net income he was receiving before the sale?—That is so.

31627. Why did he sell?—There are a great many reasons that induce a landlord to sell.

31628. Will you give the reasons that induced these particular landlords to sell?—They considered that the Act of 1903 having been passed, and sales being general over Ireland, they might as well get out. In the bulk of the estates where a landlord sells at, say, the middle price between the zones, he must make a loss. It is only in a mortgaged estate that he can make money.

31629. Most Rev. Dr. O'DONNELL.—What deductions did you make in these cases? Did you deduct the local rate?—I know what each landlord has been getting every year from his estate. The remittance I make to him every year I take as his net income.

31630. But did you deduct the local rate, because when a landlord sells out he has not to pay it?—He has not to pay it now.

Apr. 22, 1907.
Mr. George Hewson.

31631. Except as occupier?—Yes, that is so.

31632. In the case of untenanted land he had to pay it?—In untenanted land he had to pay it.

31633. Mr. O'Kelly.—Can you give any reason why the landlord sold? He was getting a certain income from his property, and he turned round and sold his property at a sum which meant a less net income to him?—Because the Act of Parliament has been passed.

31634. The Act of Parliament has got nothing to do with it. Here is the case of a man who has been getting £1,000 a year from his estates, and he determines to sell them although he knows he will only get £800 a year in future. Why should he do that?—Because he prefers the money and security in the other case even to money invested in Irish land.

31635. Is it because he knows that the income from Irish land is precarious, and depends a good deal on many circumstances, and he prefers a fixed income?—Yes.

31636. Don't you think there is no loss involved in a case of that kind?—I tell you there is.

31637. Why did he sell then, if there was?—For the same reason that a person may sometimes sell Consols or anything else at a loss.

31638. But I do not see why a landlord should sell a profit of £1,000 a year in order to buy a profit of £800 a year?—You have bought Consols at 114, and sometimes sold them at 88, and you could not help it.

31639. Mr. Kavanagh.—What is the number of years' purchase?—They vary in a number of cases.

31640. Chairman.—Could you give us details on a couple of those estates?—I could.

31641. Most Rev. Dr. O'Donnell.—It would seem from your evidence that, although in these four cases there has been a loss in actual income, there has been no loss in prospective income?—I do not say that at all.

31642. You rather anticipate that when the landlord has sold out?—I anticipate nothing.

31643. I gathered that you anticipated a fall in the value of this security?—I do not know; I think it is a toss up.

31644. Chairman.—Well, proceed, Mr. Hewson?—If it is accepted as a fact that all Irish tenants must have "economic" holdings, an impossible state of affairs is created. In every class most members of the family have to leave home to earn their bread, and it would be disastrous if the money earned by labour in England and Scotland was lost to this country, besides possibly seriously dislocating the agricultural labour market in England. That the question of rent is not at the bottom of the trouble is instanced by the fact that the average rent of a holding of several acres does not come to more than from 1*s.* to 3*s.* per week. By the recent Labourers Act, Government are creating thousands of uneconomic holdings of an acre each, the rent of which cannot be much less than 2*s.* weekly. Small farming cannot be started in this country on a large scale without protection. The present system of education makes most of the young people unfit, and disinclined to work the land, and the result is that the more energetic go away, having a better chance elsewhere.

31645. Mr. O'Kelly.—What concern is it to this country whether the agricultural labour market in England is dislocated or not?—I do not care a rap about that, but I do object to having the money earned there lost to this country. There are a number of places like Swineford where the people send their sons over to England to earn money, and if you alter that it would be a serious thing for this country.

31646. What do you mean by protection for small farmers?—I am afraid that is a large order.

31647. Are you a tariff reformer?—I do not know what I am.

31648. Chairman.—What is your opinion about getting land to relieve congestion?—There would not be any difficulty in County Mayo in getting a reasonable amount of land to assist in relieving congestion at a fair price. I have offered land for sale in that county, but though papers were sent in four months ago the lands have not yet been inspected. I have sold an estate in Mayo where the tenants of a congested district are on the fringe of it, and I have split up a large farm alongside farms of those tenants, and I hope it will work well.

31649. Mr. O'Kelly.—What part of the county is that in?—It is near Ballina.

31650. By whom was the sale conducted?—By myself.

31651. Through the Estates Commissioners or the Congested Districts Board?—To the tenants direct.

31652. Are there any uneconomic holdings on it?—There are, and I am enlarging these uneconomic holdings by adding fresh land.

31653. Would you tell me the name of the property?—Just at the moment I would rather not, but I will let you have it later on.

31654. You are enlarging the holdings from grass land on the property?—Yes.

31655. Are you charging any fines for the grass land?—Not a copper.

31656. Don't you think it would be more fair to the tenants if you sold the property, grass land and unoccupied land, direct to the Estates Commissioners or Congested Districts Board?—Why?

31657. To allow either of those two bodies to carry out improvement schemes necessary on the property?—Why?

31658. Why not?—Because I think if you make a bargain direct with a man and he is satisfied, I do not think anything could be fairer.

31659. That may be so, but you would not be able to carry out the improvement schemes the Congested Districts Board would carry out?—I do not think it will be necessary in this case, as the tenants are very industrious, and all that will be necessary will be to till the holdings that adjoin their own and make fences between the stripes.

31660. Was it any excess of generosity that urged you to do what the Congested Districts Board could have been called upon to do?—Not at all. It is a pure business matter.

31661. It is not to be traced to philanthropic motives?—No. I am not a philanthropist.

31662. Would it not have been easier to sell the whole property to the Estates Commissioners or Congested Districts Board?—I do not think so.

31663. Why?—Because, in the first place, you do not know what you are getting.

31664. Is the price that you are getting within the zones?—Yes.

31665. Is that the explanation of your direct sale?—Yes.

31666. There has been no inspection of the property?—There will, no doubt, be an inspection.

31667. Has there been no inspection as to security for value in relation to the tenants' holdings?—There has not.

31668. Do you think that is wise?—The State has taken the responsibility on its shoulders, and I have got nothing more to say. If the tenants are satisfied with the reduced annuities and I am satisfied with the price, I do not know that there is anything more to say about it.

31669. You know that in the case of improvident bargains the ratepayers are the security and have to bear the ultimate responsibility?—I am not sure of that.

31670. Have you read the newspapers and of what has happened in County Longford and Kildare?—I have. That is not a case of improvident bargains; it is quite a different story.

31671. Don't you know very well that if there are a few hundred defaulting annuities that their responsibility will have to be borne out of the public rates?—No. I am not a financial expert; but as I understand it those defaults of the annuities will have to be made right, but the country gets that back at the next payment.

31672. Let me assume that the tenants upon a property make a bargain that by and by has very serious consequences for them, as they are not able to pay their annuities?—In that case the whole country would go to the dogs.

31673. Is not that an argument for inspection for value, and should not the ratepayers of the country, who are the ultimate security, be consulted as to whether the bargain is provident or improvident?—I am not going to make any suggestion about an Act of Parliament.

31674. But you are selling a property in County Mayo, and it would be far more easy for you to give that property over to the Congested Districts Board or the Estates Commission?—Yes.

31675. Instead of that what you do is to add on all the grass land you have on the property to the farm holdings, and simply to get you over the question of inspection?—No; not at all. These half-a-dozen tenants were just round that grass land, and if I sold to the Estates Commission or Congested Districts Board there is no guarantee that the tenants would get these grass lands at all.

31676. Is this a scheduled area?—It is.

31677. Then why not sell it to the Congested Districts Board?—Because the tenants and I prefer to know what our bargain is to be

31678. Why would you not know that if you sold to the Congested Districts Board or the Estates Commission?—Because the Congested Districts Board might as well bring in our friend from Gweedore that we have been talking of. In the other case the tenants know where they are, and I know, and we are much happier.

31679. To be frank. Is it not a fact that this proposed procedure is due to getting over inspection?—No; because the principal value I am selling is this land in hands.

Mr. O'Kelly.—The tenants have informed me otherwise.

31680. Chairman.—Have you anything else to say on that point?—Some system should be devised by which a landlord who is willing to sell untenanted land should get his cash in reasonable time, at present he may have to wait four years for it. If he does not get cash, the State should give him interest on the purchase money equivalent to his average income out of the lands pending its final distribution. He cannot let his land in the interregnum, as he has no idea when the Land Commission will want to take it up. I have been in communication with the Congested Districts Board about selling to them a farm in County Kerry; negotiations are suspended in view of the sitting of the present Commission. Another financial difficulty that has to be faced by a vendor is that the Land Commission invests your money in certain securities pending allocation, and if these securities drop at the time you are going to distribute you drop your money. I lost a thousand pounds in one case. One possible means of raising money would be to allow tenant purchasers to pay off the balances they owe the State in land stock. Many large farmers who bought early would take advantage of its present low price, and buy enough land stock to extinguish their annuities, *e.g.*, a man who bought his farm for £1,500, and still owed Government, say, £1,200 of the capital, could buy £1,200 land stock for, say, £1,068, which would be a good business for him, and by broadening the market would probably raise the price of the stock. It has been stated in evidence that a landlord selling at twenty-three years' purchase with the bonus, would get more than his present net income if invested at 3½ per cent. The witness apparently forgot that the vendor has to redeem head rents, etc., pay all the costs of his sale, amounting to at least 5 per cent., live for three or four years on at least 25 per cent. less than his income, assuming all interests are paid, of which he has no guarantee, and he has also to submit to any loss that may occur in selling out of securities in which the Land Commission invest his purchase money pending distribution. A point that is somewhat overlooked when the question of the sale of a landlord's estate is considered is the fact that, with the sale of his tenanted and untenanted lands, he loses an asset which in many cases brings him an additional income. For example, an owner who has been accustomed to let his demesne, temporarily or otherwise, will find difficulty in doing so when he has parted with his sporting rights. The cost of selling a small estate is nearly prohibitive. I have sold a very small property where the total purchase money was under £500, where the solicitors' costs alone came to ten per cent. on the purchase money. The tendency of all modern Governments in dealing with Ireland seems to be somewhat on the principle of a child pulling up a plant by the roots to see how it is growing.

31681. Mr. O'Kelly.—When you refer to the tendency of modern Governments in dealing with Ireland, does that remark apply to Tory and Liberal Governments?—Yes.

31682. To all Governments?—Yes.

31683. Would you like to see a change. If the Government dealing with Ireland did not understand it properly would you like to see a change?—I shall not touch upon that thorny topic, which is outside the terms of reference.

31684. Doesn't that paragraph of yours suggest that you would?—No. It suggests to the Government to be cautious as to the carrying on of the principle of pulling up a plant by the roots to see how it is growing.

31685. Chairman.—Your next point is?—That it is a dangerous thing to do to attempt to revolutionise the whole of Ireland's system of agriculture by doing away with the large grazing farms and putting in their place a large number of twenty-acre holders, who will be attempting a system of farming to which they are not accustomed, on land which may not be suited to tillage, and with all the countries in the world competing with them in the growing of foodstuffs. Till you break land you do not know what it will do. For example, I manage a large mixed farm in Kerry, and on the whole of it only one field will grow oats. The experiences of the Famine times should be a warning.

31686. Mr. O'Kelly.—What are these experiences of the former times?—There were a large number of farms very much of that description that were tilled, and one bad year smashed a large portion of Ireland, and the people had to run away.

31687. Chairman.—Is it your opinion that the Famine was due to the failure of cereals?—To a great many causes.

31688. Was not it due much more to a failure of the potato crop than to cereals?—It just shows how a failure in agriculture may damage the whole country. If you had the whole of Ireland again turned into twenty-acre holdings, each growing crops, and each supposed to feed their families, and if these farmers had store cattle and the crops failed, and there was nothing to feed them with, where would they be?

31689. Mr. O'Kelly.—Why do you say twenty-acre holdings? Has anybody suggested that?—I have seen it suggested by many.

31690. Most Rev. Dr. O'Donnell.—Is not it supposing very unlikely things? Might you not as well suppose all the land turned into grass land, with beasts upon it liable to die by cattle plague?—It is not altogether the same. You have now an admitted success, the grazing system of Ireland, and you are going to revolutionise that and turn it into twenty-acre mixed tillage and pasture. Assuming that you put a man into a farm of that class, and he starts to grow oats on it, and tries the whole of it and finds none of it will grow oats, where is he?

31691. But a mere repetition of the Famine would scarcely affect that man?—I am merely suggesting the Famine as a terrible thing that happened and likely to smash up holders of this class.

31692. But a mere repetition of the Famine would not so much affect that man?—By no means, but it might make it impossible for that man to pay his instalments.

31693. Chairman.—Is not it a justifiable assumption to make that the very fact of this tremendous increase of grazing is in itself putting the country in a position of the greatest danger? Doesn't it mean that the whole agricultural interests of Ireland are centred in one particular kind of trade?—I do not think so.

31694. Why not?—Because of the greater amount of tillage in the North. I am not taking the farms for eleven months, but all the large farmers, and I say it would be the ruin of the country if those men's farms were cut up into twenty-acre holdings.

31695. Therefore your statement is this. In the old days tillage was proved to be unprofitable, and that is shown to some extent by the experience of the Famine?—Yes.

31696. You say that grazing is now profitable and successful?—Yes, I do.

31697. And you think that breaking up the grazing lands and going back to tillage might have the effect of bringing back to some extent the conditions of the Famine?—I do not want to put it so far as that.

31698. At any rate, it might endanger the agricultural prosperity of this country?—Yes.

Apr. 22, 1907.

Mr. George Hewson.

31699. Isn't the reverse the case, and isn't it a fact that so long as you continue the grazing system, and so long as it goes on increasing at the rate it has been going on, that all the agricultural eggs of Ireland are being placed in one basket, and that the whole prosperity of the country depends on it?—I want to differentiate between the large farmer and the large grazier. I think it would be a ruinous thing to do away with the large farmer, who is the backbone of the country. You will get plenty of land on the eleven months' system to do what you like with.

31700. In your opinion is grazing, no matter whether it is carried on by an eleven months' tenant, a judicial tenant, or by someone else, a profitable trade?—Yes.

31701. Is it not a fact that this particular form of agriculture has largely increased in recent years—that tillage has gone out, and that there is much more land gone down into grass?—I would not call it recent years actually.

31702. Well, within the last fifteen years?—Statistics will show that, but in the counties I know I do not think it has done that.

31703. In Ireland, generally, has not the last fifteen years seen a tremendous addition to the grazing lands and a tremendous diminution of tillage?—I should go further back and say there was a great deal more tillage forty years ago.

31704. There has been a gradual tendency to increase the land under grass?—Not to a very appreciable degree: unless you have statistics to show that is so.

31705. Does not that mean that in proportion to the amount of land put under grass that more and more attention has been paid to the cattle trade as against tillage?—Yes, because it pays.

31706. And does not that mean, therefore, that the tendency has been a great deal to concentrate the agricultural prosperity of Ireland in the cattle trade?—Very largely so.

31707. If, therefore, anything was to happen to the cattle trade, if it were suddenly to meet with a big slump, would not an enormous proportion of the agricultural prosperity of Ireland be threatened?—Yes, but I do not think that is likely.

31708. But is not it more likely if you have all Ireland practically interested in one trade?—I do not think so at all. All Ireland is not confined to one branch of the trade. The tillage farmers in the North largely buy their stores in the South and West. Ireland is a small place, and with all the granaries of the world at your door more money is made by utilising the land fit to carry grass than by tillage.

31709. Are you one of those people who believe that the importation of Canadian store cattle would be a bad thing for this country?—I think it would be an exceedingly bad thing for Leitrim and counties like it, and I should resist it to the end; but I think the ordinary grazier would make money by it, because he would buy his stores cheaper.

31710. Do you think he could buy Canadian stores cheaper than Irish?—If he could not, then Canadian stores would not do us any harm. It will ruin the small breeder in this country.

31711. Sir Francis Mowatt.—The small breeder being a small holder?—Yes.

31712. Chairman.—The small breeders in the West of Ireland would suffer great loss?—Yes, enormous loss.

31713. Would it be better if the small men of Ireland were encouraged to depend on other things besides rearing young stock?—Well, if you have the information that Canadian cattle are to be let in, perhaps so.

31714. Can anybody say for certain that they won't come in?—No more than anybody can be sure that the Famine times will not come back, but there is not a likelihood.

31715. If Canadian stores came in, it would be a serious blow to the small man who breeds cattle?—Yes.

31716. Would he suffer such a loss if he had other things to depend on?—If you put him on a twenty-acre farm prepared for the advent of Canadian cattle; if he had his crops ready in the next six or seven years, and Canadian cattle then came in he might be all right and if Canadian cattle did not come in he might be all wrong.

31717. But if he is put on a twenty-acre holding and his crops are ready, he would have security for possible loss resulting from the importation of Canadian cattle?—If you are going to tell him that Canadian cattle are to come in this time three years, then shunt him to twenty-acre holdings and let him learn farming and be ready for it.

31718. Then if anyone has the belief that Canadian cattle are to come in, the policy of putting these men on twenty-acre farms is a good one?—Apart from the conditions I mentioned before, it might be. In my experience, in most of the congested districts, the bulk of the real distress consists of cases where an old couple are left without a family; where the husband or wife dies, leaving a family of young children; or where one of the senior members of a family is in an asylum. These factors will occur under any circumstances. Unless something is done to give the country an outlet other than agriculture, no amount of creation of 20-acre holdings will solve the problem. Surplus stock belonging to these twenty acres holders cannot be kept without being sent to grazing farms, and, assuming that compulsion was resorted to, how are you going to decide what farm is to be bought and what left out? A great injustice would be done to those whom you compel to sell, as owing to the restricted market for land the value of the farms not sold by compulsion would be greatly enhanced. Further, the country is likely to be impoverished, not enriched, in the future. You cannot get a worse absentee landlord than the State. The purchase money of tenants' interest in farms sold is likely to go out of Ireland. The management of estates and collection of rent from a Dublin centre will put a stop to the local circulation of money by landlords, agents, &c. Further, as regards the breaking up of grass lands—it is an acknowledged fact that the class of cattle in the north, where tillage is carried out on the best principles, is far inferior to the class of cattle in the grazing districts. This is admitted on all sides, and the reason given by Northerns is that their tillage farms, laid down in temporary grasses, will not turn out good stock in the way they should be turned out for the market. I do not put forward this view for the purpose of damning migration altogether, but to utter a note of caution.

31719. Mr. O'Kelly.—How are you going to assign what farms are to be bought and what left out. That is a very difficult question?—Desperately so, I think.

31720. Tell me how are you to get over it?—Well, you come to a centre where you want to get some farms from the tenants, and one man wants his farm as much as his next-door neighbour. How are you going to make one man sell and not use compulsion with his next-door neighbour?

31721. Wouldn't you leave that to the discretion and impartiality of the Board that does that sort of thing?—I do not see how the Board can be impartial under the circumstances, because they would have to say to one man that he must clear out and leave his neighbour there. I do not see how they are to get over the difficulty.

31722. You do not see how they are to get over the difficulty?—No; not in the way suggested of cutting up large farms held by farmers.

31723. Let me assume that the Congested Districts Board have purchased the property and have so many acres that they wanted to add. Don't you think they would select the nearer rather than the further away farm?—Assuming it was near them they would certainly select it, but wouldn't that be exceedingly hard luck in the case of the man whose farm was selected?

31724. I do not care what the character of the stock in the North of Ireland is, don't you think if we broke up the grazing ranches in the West of Ireland we would have the people upon them?—I am most anxious to see the people upon them.

31725. Wouldn't that be more important than having cattle upon them?—I do not know if it would be if the people are not to succeed.

31726. You do not think it is more important?—I am quite with you if you can prove the thing would be a success

31727. Would you be willing to give it a trial?—I am afraid you would be uprooting one good thing to put in a doubtful.

31728. The people were on the land before?—And did not succeed, unfortunately.

31729. Oh, they did, but they were driven from it?—By the Famine.

31730. By the Famine? Are you not aware that there are a number of landlords in the West of Ireland who, for the purpose of consolidating their holdings, drove the people from the land and turned the holdings into grazing ranches?—In a good many cases, I am sorry to say, they did do so, but in most of the cases it was natural causes that turned the holdings into grazing ranches.

31731. You are aware that in a great many cases the people were driven out in order that bullocks might supplant them?—I admit there were a great many hard cases, and cases that never occur now, but there were other causes that drove the people out.

31732. Sir JOHN COLOMB.—As an Irishman born and bred, you are as anxious as anybody else that the people should remain in the country, but your evidence is to show the many elements that have to be taken into consideration in arranging to induce them to remain so that they may prosper?—Quite so, that is my whole point.

31733. CHAIRMAN.—It is difficult to prove it unless by experiment?—Exactly, and by following it up and seeing what is to succeed.

The Commission adjourned.

SIXTY-SEVENTH PUBLIC SITTING.

TUESDAY, APRIL 23RD, 1907,

AT 11.0 O'CLOCK, A.M.,

At the Courthouse, Manorhamilton, County Leitrim.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. GEORGE HEWSON further examined.

Apr. 23, 1907.

Mr. George Hewson.

31734. CHAIRMAN.—What is the next point that you wish to deal with?—I would like to refer to Mr. Finucane's interesting evidence. A few remarks as to some of the points that he raises may be useful. In question 15585,* Mr. Finucane states that he thinks it would not do for either the Estates Commissioners or the Congested Districts Board to approach the landlord of a congested estate and ask him whether he objects to any of his tenants migrating. Well, personally, I don't think any landlord on a congested estate would object to the removal of any tenant to better surroundings. They would probably rather cooperate with the Estates Commissioners than otherwise. I will illustrate that by the only case of the kind that occurred in my own knowledge. The Congested Districts Board approached me as regarded a tenant on an estate I manage whom they proposed to migrate to a better farm. I replied that I was perfectly agreeable, and suggested that the tenant, if he got this better farm, should sell his holding on my estate to the adjoining tenant. In fact I personally, and as representing a great many landlords in this district, should welcome any suggestion of that class.

31735. It would not be such a satisfactory method as enlarging holdings when the Board has got possession of the whole estate. There are very often other things to be done as well, like re-striping?—There are a great many things of that sort, but what I mean to convey is that these should be subsidiary, *i.e.*, done after the tenant had bought out his landlord's interest. There are a great many cases in which the landlord could not sell the whole estate at the price the Board might offer, and that landlord, I am personally certain, and I speak for a great many in this county, would not have the smallest objection to being approached with a view to tenants who wished to migrate doing so. Personally, I shall undertake to welcome any suggestion of that sort, and I am agent for nearly twenty congested estates in this county.

31736. You are aware that was the process contemplated when the Act was first passed, but I think it was found that unless the Congested Districts Board bought an estate it was not very easy to do it?—I think that is so.

31737. Most Rev. Dr. O'DONNELL.—Quite so. Perhaps, Mr. Hewson, your point is that the owner or agent would not object to reducing the number of tenants on the property, even if the migratory tenant went to one of the Board's estates?—Certainly, and I am perfectly certain that is the general view of the landlords I have spoken to on the subject. I think it is a thing that ought to be done. I now go on to refer to questions 15595 to 15598,* and I say that the point raised in these questions would be easily met by allowing the migrating tenant to sell his interest to an adjoining tenant. He would thereby get sufficient capital to work his new holding. A difficulty will be found in migrating tenants from districts in Leitrim, where occupiers have plenty of turf and water, to districts of, say, Roscommon, where turf and water are scarce. There is no reason why notice should not be put in congested districts to say that any tenant who wishes to go from an uneconomic farm to an economic one should apply to the Board. I do not see how anybody could object to that being done, and thus set the ball in motion. As I have said before, the difficulty would be found in migrating tenants from Leitrim, where they have plenty of turf and water, to districts where both are scarce. I think you will find it very hard to move any of the congested people in mountain districts to a farm in, say, Elphin, where the great question of fuel would come in.

31738. Sir JOHN COLOMB.—I take it, Mr. Hewson, that in carrying out the policy of the Board with reference to acquiring land for migration, you attach extreme importance to proximity to bog and a plentiful and well-distributed supply of water?—Yes.

31739. You regard that as a vital necessity to the suitability of grass land or lots of grass land for settlement?—Yes.

31740. Mr. SUTHERLAND.—Were these grass lands ever occupied before?—The grass lands in Roscommon?

31741. Yes?—As far as I can say, I am certain they were. There are traces of houses.

31742. Are you aware if there was any scarcity of fuel and water then?—There must have been certainly in a great many of them.

31743. Did they manage to subsist all the same?—Of course it is a very long time ago, and I could not tell how they managed or how many bogs have been cut out since then.

31744. But if they lived there before, is not it probable that they would have a supply of fuel and water again the same as before?—My point is this. If you have people living in a country where they have had little or no fuel or water they do not feel the lack of it, but if they have been accustomed to it they do.

31745. That is not the point. What was there before will be found there again?—In many places the bogs all over the country have been cut out.

31746. And the water?—Possibly there was water.

31747. And there is water still?—I do not know the size of the holdings in Elphin and Roscommon. All I can say is that in driving through Elphin you see traces of where people evidently lived; but while there might be an abundant supply of water for a large grazing tract there might be a supply for only one or two people if the said tract was cut up.

31748. Most Rev. Dr. O'DONNELL.—It comes to this that the body promoting migration should carefully attend to the need of the migrants for a supply of fuel and water?—Quite so.

31749. Is there any canal running through the district to which you have referred?—There is not, as far as I know.

31750. You have sometimes seen turf sent by rail to a district?—I have more often seen it sent in boats. I have seen it sent to Tory Island, and turf boats go from Clare to Limerick.

31751. Unless the bridges obstruct, there is no reason why turf might not be sent by train?—There is the reason that it would be exceedingly expensive to do so, and the bulk of turf that could be put in a wagon would be so little that it would have no appreciable effect as regards supply. The country I have in my mind for migration is Elphin, and I do not see how you are to get turf distributed there by rail unless a railway is made between Carrick and Roscommon.

* See Appendix to Third Report of the Commission [Cd. 3414 1907], page 117.

31752. The Great Western Railway pierces an immense bog before it crosses the Shannon?—Yes.

31753. If that bog could be made available, there would be ample fuel?—If that bog could be made available and brought twenty miles and distributed among the people ten or fifteen miles from the railway, there would be ample fuel, but I believe that the cost would block the whole proceeding.

31754. Have you any information on the subject of compressed peat?—I have seen it made in several places.

31755. Do you think that would be a possible means of meeting the difficulty?—I should be very glad to see it futher tried, but most of the compressing of peat has been a failure.

31756. You do not think it has gone much beyond the experimental stage?—We can hardly say it has, because it has failed for want of outlet.

31757. Sir FRANCIS MOWATT.—For want of a market?—Yes, and for cheap means of transport to market.

31758. Most Rev. Dr. O'DONNELL.—The migrants might help the market?—Yes, certainly, if it could be supplied cheap enough.

31759. Mr. KAVANAGH.—Outside the question of fuel and water, you see no other objection to migration to Roscommon, for instance?—There is the great difficulty if you brought people from Garrison and all that class of country to absolutely new surroundings and placed them far from a town and market. I think they would find it very difficult to accustom themselves to their new surroundings. I would be delighted to see it tried and to be told that my view is wrong.

31760. In answer to Mr. Sutherland you said that all these lands were at one time occupied?—I did not say they were. All I can say is in driving through the country it looks as if people had lived there. I do not know what sized farms there were. They might be forty, fifty, or a hundred acres.

31761. Don't you think that Leitrim and Sligo men are good enough farmers to adjust themselves to the new circumstances in a few years' time?—It is not altogether a question of farming, it is also a question of environment, and I should like to see it tried. I should like to see a few men from Rossinver shown such a place, brought to the nearest market town, shown everything they could get and what they would have, and if they liked to take it I would wish them joy of it. My opinion is they would not take it.

31762. It is not suggested that migrants should be brought down there and given a holding without first having an opportunity of considering all the circumstances before they were asked to settle there?—That is what I say. When they have considered the circumstances I think you will find it hard to get them to move.

31763. I hope your opinion may be wrong?—I hope so, too, if you are going to try it.

31764. Sir FRANCIS MOWATT. — You say the point raised by Mr. Finucane's questions would be easily met by allowing the migrating tenant to sell his interest to an adjoining tenant, and that contemplates that the adjoining tenant would thereupon become possessed of that holding as well as his own?—That is my contention, and then the migrant would have some capital to start in his new place. The point Mr. Finucane makes is, if you take a tenant away you are leaving his holding and its improvements to the landlord to do as he likes with. My point is you need not do that, because the tenant who is going away can sell his interest.

31765. CHAIRMAN.—I cannot conceive that, because there would be no object in migrating. At least one of the objects in migrating would be lost if you moved a man to better land and did not benefit anyone in the district he left?—Yes; but I think the argument as regards congested holdings is that they are too small and require enlargement. If you take one tenant away and buy the interest in his holding, you send him away with a little money in his pocket to start with.

31766. And then throw that holding into that of the adjoining tenant?—Yes, that is my point.

31767. Sir JOHN COLOMB.—I want to ask your views as to the probable difficulty of getting migrants to leave very congested districts. Do you think that means for modifying their objection to leave might be carried out somewhat on these lines, say the Congested Districts Board purchase grass lands in Roscommon or elsewhere, and to do preparatory work for the settlement of these farms they drew from a district from which it was thought necessary to migrate people, the eldest sons of tenants as migratory labourers to that district where these new farms were to be laid out and work there and so get accustomed to the place, do you think the expense would be very great?—I will touch on that a little later on. Where the Congested Districts Board have done well, in my mind, is where they have taken farms adjoining congested districts. There labour has been handy and they have been perfectly well able to get plenty of hands to do their work. If you transplant a number of workmen into the middle of what we may call a prairie, you have to arrange to house them, feed them, give more money than to men living on the spot, and the expense would be very much increased. That would be a direct difficulty, to my mind.

31768. CHAIRMAN.—What is the next question to which you refer?—It is number 15606.* If the Act of 1903 prevents the Land Commissioners providing money from the Reserve Fund for the improvement of estates where holdings are sold direct from landlord to tenant, power should be given to do so; but this power must be in existence, as free grants are made to evicted tenants in direct sales.

31769. Most Rev. Dr. O'DONNELL.—The Act makes special provision for evicted tenants?—It does as regards direct sales. I think power should be given to the Estates Commissioners to provide money for betterment, but to my mind Mr. Finucane must have made a mistake, because I know as a matter of fact that free grants are given in case of direct sales, where evicted tenants are sold to direct.

31770. On all estates the Commissioners are free to make advances to evicted tenants, whether the sale is to the Estates Commission or direct from landlord to tenant?—Well, if that is so, it is a blot in the Act that they cannot make advances where there are direct sales between landlord and tenant, and this should be remedied.

31771. For the improvement of small holdings; that is your point?—Yes.

31772. CHAIRMAN.—The position is that the Estates Commission can give a grant out of the Reserve Fund, but they could not make a loan or an advance and get it back from the tenant. It has to be a free grant from the Reserve Fund, and the Reserve Fund is limited?—Then the question is confused as I read it. It may be wrong, but he said they could not give a grant.

31773. They can give a grant, but it is absolutely out of pocket, and they can never get it back?—I think that could very easily be met by arrangement. If the landlord and tenant agree on a price, and do it quite fairly and above board, the tenant to get a certain proportion (on which no bonus has to be paid) to improve his holding, I do not see why that should not be done.

31774. We have heard something of that?—It is exactly the same thing as the Commissioners propose to do in cases of sales to them.

31776. Mr. KAVANAGH.—Lend money at lower interest than anybody had it elsewhere?—Well, they do it in indirect sales, and why not in direct?

31777. Most Rev. Dr. O'DONNELL.—The solution of this question is that when holdings are being sold to the tenants at that stage care should be taken to improve the small holding, and you do not see why it should not be done?—Certainly, I do not see why it should not be done.

31778. CHAIRMAN.—And the cost to be repaid by an addition to the annuity?—You do it in the case of the Estates Commissioners, and why not in every case?

31779. If the Estates Commissioners allowed an arrangement of that sort to be carried on between landlord and tenant, without any sort of control on their part, you might have tenants tempted for the purpose of getting an immediate sum of ready money to agree to pay annuities out of proportion to the capacity of the land?—That could be perfectly easily guarded against by having the form of the agreements varied to a small extent by putting in the price the tenant is paying for the holding and the addition which he is providing for improvement purposes, so that the thing would be quite clear and above board. Where the holding on which an improvement advance was applied for the Land Com-

* See Appendix to Third Report of the Commission [Cd. 3414, 1907], page 118.

Apr. 23, 1907.

Mr. George Hewson.

mission could decide whether the advance should be made. My point is, I do not see why advances should be made to one class of tenant and not to another. I now go on to deal with question 15608. Statistics are not quite reliable, as in many cases two or three holdings have been sold to the same tenant, and the aggregate of the holdings so bought would make a so-called economic holding. As to statistics being not quite reliable in respect of uneconomic holdings, I know of two instances, which must be included in the seventy-nine in that schedule for Leitrim, where I sold apparently uneconomic holdings to tenants, but I had sold other holdings to those same tenants under previous Acts which would bring them up to the term economic. As regards question 15618,* I wish to say that, assuming improvements to be made, and that the capital sum expended is added to the tenant's purchase-money, the sum might still eventually be practically lost if no provision is made that these improvements are properly maintained. That is a point where I think the Congested Districts Board might very well step in. If money is spent in drainage or similar works, unless there is some controlling or parental body like the Congested Districts Board, there is nothing to prevent improvements such as drains being choked up inside the next twenty years and the value of the capital sum lost to the tenants.

31780. There are no rules compelling the maintenance and keeping open of the drains?—Exactly, that is the point.

31781. It comes to this, that while the annuities are being paid there should be some State provision to insure that the holdings are being kept in a proper condition?—Yes; that the main drainage of the district be kept in proper condition. I go now to question 15623, and I say that when a tenant is absolute owner of his farm he can get money from the Board of Works for purposes mentioned. In regard to question 15630, I say:—The migrating tenant is in no worse condition by migrating than if he stopped at home. The point is if a man has been on a holding and has paid twenty-five instalments, he is a long way towards getting rid of the thing altogether. Personally I do not see that he is in any worse position if he migrated, because we assume that he gets an enhanced price for the holding on which he has paid the twenty-five instalments, and it is no harm to him to begin again the 68½ years on a better holding. I may, therefore, put my reply to these questions as follows:—Question 15630—The migrating tenant is in no worse position by migrating than if he has stopped at home. He is given a free grant of land by the State, and has sold his interest in the old holding, presumably for an enhanced price, if he has paid twenty-five instalments. Question 15632 does not apply to Leitrim. There are practically no congested estates with large farms adjoining. Question 15700—I think the Estates Commissioners would be put in a difficult position by assuming that they would not depart from a price they had already fixed. Take a second term rent of £15, on which a third term rent of, say, £10 is fixed, on which they had originally fixed a price of 25 years' purchase, *i.e.*, £375, this would represent 37½ years' purchase of the new rent, which would be outside the zones, and the annuity would be higher than the third term rent. That would mean a general howl as to the terrible number of years' purchase the tenant with a third term rent of £10 was paying? That shows the absurdity of this question of years' purchase. I next refer to Question 15720, etc. The suggestion as to cutting up farms of over £50 valuation would, in many instances, be unworkable. Assume a farm valued at £60. How much of it would be cut off to form an economic holding, and who would undertake the apportionment thereof?

31782. Most Rev. Dr. O'Donnell.—You would fix the limit at a higher figure than £50?—My point is, we have no right to take any of these farms from tenants who have been living in occupation of them; they are the backbone of the country and ought to be kept there and kept in the state in which they are.

31783. You are speaking of residential holdings?—I am speaking of holdings resided on by tenants. Mr. Finucane says everybody should be treated alike, and if the landlord's land does not go round then go to the big tenants. I say that would be an impossibility.

31784. Mr. Finucane began with untenanted land, and in this category he placed land held on the eleven months' system, then non-residential farms, and finally he said if under these two heads you do not have enough land to go round you should take land from the large graziers?—Yes; the large tenants who are residential tenants.

31785. It does not follow that the power would be exercised, but don't you think it would be well that a body charged with relieving congestion should, in exceptional circumstances, have the right to say to a man with a large acreage of grass land that some of it should go at a reasonable price for the relief of congestion?—I do not think so, for this reason. Here is a tenant farming a hundred acres of land at a valuation of £75. He is farming on the basis that he has got that farm and knows what it can make. I do not think you have any right to cut that man off from any part of his living, and by restricting him you would throw his whole farming operations out of gear.

31786. You probably make the case in which that size of farm would be necessary for a man's family. But what would you say to a much larger holding, one of 500 acres?—I say still you ought not to take it.

31787. Mr. Sutherland.—What about a farm of a thousand acres?—I do not think you will find very many farmers in Ireland who have a thousand acres.

31788. What is the limit of the largest. Do many go above 500 acres?—I do not know very many.

31789. Most Rev. Dr. O'Donnell.—Your objection seems to be touching the residential man?—Yes; the residential man who is living in the country and is of use to it.

31790. You do not equally object to taking non-residential farms?—If you give a fair price I think that a person who has a non-residential farm would likely sell it. It is a question of price as regards that farm.

31791. Mr. Kavanagh.—Even if the tenant was working it in conjunction with another farm on which he resided?—I would call that residential.

31792. Two holdings of, say, £25 each?—I would call that residential.

31793. The only non-residential farm then is that held by the man who lets it at eleven months?—That is so in practice.

31794. Most Rev. Dr. O'Donnell.—Or a man who had a second farm at a distance of three miles, where each of the farms was large?—I would not touch that tenant at all. I think if I acted for a landlord in that position, and he was offered a fair price, I would advise him to sell. But if you, as a State, try to do the thing on the cheap, you won't be able to succeed—that is, to get things for less than they are worth unless by confiscation.

31795. Mr. Kavanagh.—But if a tenant lets part of his farm on the eleven months' system, don't you think that would put him in the same category as the landlord doing the same?—If a tenant has let part of his holding on the eleven months' system, and it is a merely temporary arrangement, and he has sons growing up, I would be very slow to move him. If he was a tenant living away and not likely to come back there might be some excuse for touching him, because he is exactly in the same category as a non-residential landlord.

31796. Sir John Colomb.—What about the big farmer who lets in con-acre. Do you put him in the same position?—I do not. He is a tenant, and because temporary necessity compels him to let his land, I do not see why you should take it away from him.

31797. Most Rev. Dr. O'Donnell.—Take another case. Suppose on the hillside there is a population of small men, who out of necessity must take land. But owing to that necessity the large sum of £7 or £8 a year is charged. Don't you think it would be reasonable to stop that system of allowing him to make a great lot out of the land through the necessities of the hillside people?—It is really a question of market, and once you interfere with markets and political economy I do not know where you will stop.

31798. But you would not necessarily interfere with the market by proceeding on the ground that you give him a fair price for his land?—I must decline to go

* See Appendix to Third Report of the Commission [Cd. 3414, 1907], page 118.

into a hypothetical case like that, because it is so far off you may not reach it. It is time enough to discuss that when you find there is not enough land to go round.

31799. You mean the hypothesis that you might not be able to find land for these people elsewhere?—That is so.

31800. And if that were so?—Give me a concrete case and I will try and answer it.

31801. A few days ago we had abundant evidence at Tubbercurry that all round there there is a population such as I have described; they are under the necessity of taking an acre or an acre and a half of the rich land in the plain for con-acre, and they pay at the rate of from £7 to £9 for it?—Well, I personally would not interfere with the tenant who is living in the country in that case; certainly not.

31802. Mr. O'Kelly.—Don't you think it justifiable to apply compulsion to the tenant of non-residential land?—You are talking of compulsion now.

31803. Don't you think it would be as justifiable to apply compulsion to him as to the owner in fee?—Personally I do not agree with compulsion at all, good, bad, or indifferent. I do not think compulsory powers should be exercised except as a very last resort.

31804. Suppose the voluntary principle failed purposely, you would have no objection in the interests of the country to the application of compulsion?—At the next Commission sitting here twenty years after this, I will reply to that question if the voluntary principle is unworkable.

31805. Let me assume that the compulsory system has failed?—If you are going to ask hypothetical questions I fear I must ask you to reply to them yourself.

31806. Most Rev. Dr. O'Donnell.—You must have a view on this question. If the Congested Districts Board provides for these small men at a distance, then apparently this market, which the tenant who lets his land at £7 or £9 an acre has, will disappear, and isn't it as broad as it is long? If the small tenants are removed and go elsewhere the large tenant won't be able to get as much for his land?—He might by taking it out of the land himself. The small man won't pay £7 or £9 per acre for land without getting some profit, and if he is able to do that, the large tenant might be able to do that himself, but land does not make that average price if let for a number of years in succession.*

31807. But if the taking of this land for the small man is a necessity, necessity knows no law?—Quite so.

31808. Sir John Colomb.—I take it you mean that where the market demand for the con-acre of the large tenant has been removed by the migration of the small tenants then if there were no applicants for con-acre letting that would probably drive the large tenant to tillage?—It would, perhaps.

31809. And that would probably lead to the employment of labour?—It would, but I personally do not know any district where there is such an enormous demand for con-acre as that. I know, in Donegal, the other day, a large price was given for odd farms that are taken like that for odd cropping, but not as a constant thing.

31810. Most Rev. Dr. O'Donnell.—I understand it prevails in Tyrone and also in parts of Donegal, the con-acre being on large farms?—In East Donegal, such as Ramelton, you will find a man will take the whole of a small farm for con-acre if the owner happens to be away in America, Dublin, or elsewhere. Other people let land for con-acre, but at nothing like that price.

Most Rev. Dr. O'Donnell.—The price I have given is that to which witnesses testified to at Tobercurry.

31812. Chairman.—Is there anything else you wish to say?—Yes. I refer further to Mr. Finucane's evidence as follows:—Question 15756—There is no sign of a crash in the letting of grazing farms; on the contrary, grazing farms are letting at a better price this year than last, and the importation of Canadian stores would probably make them let even better. Paragraph 3 would mean the spoliation of a certain class of tenant farmers, who would resist such a policy to the last. Question 15821—The improvement of estates is more than a question of staff. The Congested Districts Board have hitherto carried out their work in districts where labour is plentiful. Assuming that the Estates Commissioners cut up and square an estate, say near Elphin, the cost of imported labour would be enormous. Question 15885—Mr. Finucane appears to estimate his figures on the assumption that the landlord has not got to redeem any charges, has no costs of sale to pay, not to speak of the fact that he loses 20 per cent. of his income at least for four or five years while the sale is going through, and his risk of loss in selling out securities in which the Land Commission invest his money pending distribution. Question 15890A—It is quite true that the causes mentioned by Mr. Finucane may have originally created the congested districts, but up to a short time ago the people had not had any chance of learning how to make the best of the material they had at their hand. Taking him all round the Irishman will work well and hard when he is putting in his potatoes and saving his hay, but in most cases he has not seen that by steady industry, in work such as draining, shovelling his land in winter, and the like, he will make much more of his holding. I think that this could be changed by a very cautious system of migration when possible, but more especially by raising his standard of living where he is at present by making him in the first instance owner of his holding, and in every possible way encouraging him to improve it—a class of work that has been most excellently done by the Board in other counties. Question 16051—I do not see on what ground Mr. Finucane can take twenty-six times the tenement valuation as a fair price to be given for land. He gives no reason for his assertion, and further (Q. 16077) he appears to refuse to accept as evidence of value the rent that an owner or occupier may have received in the open market for a number of years for his land. A grazier does not take land for the benefit of the landlord but to make a profit out of it himself, and the Land Commission (Q. 16087) fix a rent, taking into account the fact that there is a sitting tenant in the land. The gross acreable rent in the Pink Schedule is never the full rent that could be got for the land if let to a solvent and respectable tenant who took it to make a living on it. Statistics of untenanted land in Leitrim (in Mr. Ginnell's Parliamentary Return) are quite unreliable, as the bulk of the land called untenanted is mountain. A further reason why the Congested Districts Board should be left to carry out their work is that further duties are being thrown on the Estates Commissioners by the Bill of 26th February, 1907, in which they are charged with the development of mines and minerals, which, by the way, would be probably much better done by the Department of Agriculture.† The Congested Districts Board no doubt have made mistakes, and would be the first people to acknowledge the fact, but they have much more experience than the Estates Commissioners could possibly have, who, if they took up their work, would have to learn the business from the beginning. I am a landlord, a tenant, and a land agent. I own over 2,000 acres of land in Leitrim, most of which is mountain, on which I keep Scotch sheep. I pay £300 yearly in labour, and generally keep a pedigree bull for the use of my neighbours. I have a small estate in Limerick, most of which I farm. I live on an uneconomic holding, and have to send out my family to earn. I superintend farming on an estate in County Kerry, where we do a great deal of tillage and dairying, and pay a labour bill there of £450 yearly. I also superintend the management of a large demesne in Sligo, on which we pay an average labour bill of £1,200, not taking into account the wages of watchers, etc. I manage estates in most of the congested districts in Leitrim, and also in congested parts of Mayo, Sligo, Galway, Cavan, and Kerry, and have had considerable experience of the management of congested estates in Donegal and Clare. I can show rentals comparing the rents of congested districts before 1800 with the present time, and can depose to landlords' expenditure in main drainage, planting, etc. I hand in list of prices received for holdings within the last few years.‡ As regards the list of prices, it is

Note by Witness.—I was not informed by the Commission as to how much land was let at these rates, whether with or without manure, and whether this was a regular price obtainable for a particular plot of land.—G. H.

† *Note by Witness.*—I should like to say that time prevented my giving any evidence as to the stage at which, in my opinion, the Department of Agriculture could profitably take up some of the work of the Congested Districts Board.—G. H.

‡ See p. 264–9.

Apr. 23, 1907.

Mr. George Hewson.

rather interesting to note that in one or two cases where a holding has been sold twice the price the second time is always in excess of the first sale. I will give one instance. There was a holding sold in 1888 for £60, and in 1895 it was sold for £180. There was another holding sold in 1898 for £437 10*s.*, and in 1901 it was sold for £465.

31813. Most Rev. Dr. O'Donnell.—Doesn't that show a most extraordinary demand for holdings?—It does. I have a most interesting return showing 40½ years' purchase. I have rather interesting statistics as to the price of commodities in 1735.

31814. How is that record kept?—It is a book that was handed to me with other documents of the estate. It shows that 37 tons 14 cwt. of straw was sold for £24 10*s.* 5*d.*, and thirty sheep and a cow for £4 10*s.* 3*d.*

31815. Taking that price for the straw and considering the value of money then and now, the price then would not be much lower than now?—I should say as regards the sheep it would certainly.

31816. One cannot know what exceptional circumstances entered in?—You can look it right through here.

31817. Sir John Colomb.—I see you yourself spent £300 a year in labour in one estate of your own?—Yes. I still spend it.

31818. Do you find, as every class of men here and on the other side of the water find, that although you may spend £300 a year in labour in Ireland you have to emigrate your own family—your young people have to go elsewhere?—Yes.

31819. That is the universal experience with all classes in the United Kingdom?—Yes. I had not time to look over Mr. Bailey's evidence carefully, but there is just one point I should like to draw your attention to. He says (Q. 16386) everybody knows as regards a great deal of land in the West of Ireland that were it handed back to the owner he could make nothing out of it.* I do not at all agree with him. If a congested estate was handed back to the landlord, I think the landlord could do a very great deal more with it than probably he is getting for it.

31820. Most Rev. Dr. O'Donnell.—Such an estate as the Hill estate could not be made much of in the absence of occupiers?—I think it could. If you were to migrate all those Hill tenants to a good country, I would very much rather have the whole estate in sheep than occupied by people who are paying 5*s.* to 10*s.* in the year.

31821. That was tried, and did not succeed very well?—But was the whole place cleared?

31822. Well, there was a sufficient quantity of it cleared?—The place was not fenced or properly worked, I am sure. Further, to Question 16386, the witness says we all know as regards a great deal of land in the West of Ireland if it were to be handed back to the owner, and if he could not get a tenant to cultivate or pay rent he could get practically nothing out of it. Well, if you could not work it or get a tenant, of course you won't get anything out of it.

Rev. Francis O'Hara examined.

Rev. Francis O'Hara.

31823. Chairman.—You represent the United Irish League?—Yes, I represent the Ballaghameehan Branch.

31824. What particular point is there that you want to bring before the Commission?—The parish priest of the parish was to have represented the place here on yesterday, but was unavoidably absent, and he asked me to come here. I happened to be here yesterday, and I was greatly surprised to hear evidence that was given against the Congested Districts Board. It is the only Board that has ever done anything for the country.

31825. Sir Francis Mowatt.—Country or county?—I would say both one and the other. It has the confidence of the people, and very justly so, because it has benefited them as far as it possibly could and as far as the people could receive the benefit from it. I was greatly surprised to hear that anyone would have said anything against it, or that it did not do this or that. There was one case mentioned—the case of three properties that were put before the Congested Districts Board for purchase. The last of those three at least I had certain knowledge of. Probably twenty years ago the land was taken over, and if I do not mistake, the land was evicted land. It was an evicted farm, and it was left there for years, and a gentleman came from Scotland, took over this land, and built on it; and then, inside of twenty years he turned round and, I suppose, wanted to make capital out of it, and sell it to the Congested Districts Board. Very probably some of the tenants, some of the people of the neighbourhood in whose knowledge this was went away and gave private word to the Congested Districts Board about it—that it was evicted land. From the evidence of Father Meehan, who made the complaint in this case, I should have assumed that the correspondence was attended to, but the would-be vendor failed to answer the queries of the Congested Districts Board, the correspondence dropped, and the sale fell through.

31826. You say probably they did that?—I don't know anything about it except what I heard on yesterday, but I know this of my own knowledge. This land was for years and years there until this man came from Scotland and took it over and built on it. It was not the residence, and did not belong to the family. It was because no other one would touch it he got it conveniently. He wanted then to make more profit out of it at the first opportunity he got.

31827. Most Rev. Dr. O'Donnell.—You think that is not the class of man to receive a big price?—He is not the man entitled to what we would call the benefits that would accrue.

31828. Chairman.—What particular reason was there that the Congested Districts Board should not buy the evicted land?—We say this, if a man were unjustly evicted from a home that he could not pay the rent of, that he could not do it from force of circumstances, and from the times and from everything else; it was his deepest interest to keep it if he could, because it was the home of his fathers, and if after all these causes he could not keep it, he would naturally like to return to it on honest and just terms.

31829. Is it not a great deal more likely he would get it if the Congested Districts Board bought it than if it remained in the hands of the gentleman from Scotland?—Oh, after twenty years it is hard to say where he would be.

31830. If he was no longer available of course that is different. Then he probably would not get it?—He might be available if the other man had not interfered.

31831. In your opinion where land is what you call evicted land that has become vacant owing to the eviction of the tenant, and that somebody has stepped in and bought that land, the Congested Districts Board should not buy it. I want to know why they should not buy it? It seems to me if your object is to get back the evicted tenant that object is much more likely to be achieved by the Congested Districts Board buying than if they do not. I notice you say that the man was evicted, and the other man came in and interfered with his going back?—He interfered with his going back by grabbing his farm, and he encouraged and materially aided an evicting landlord in his nefarious work—grave acts of such glaring injustice that should not commend themselves to the Congested Districts Board, but cry to heaven for vengeance.

31832. Most Rev. Dr. O'Donnell.—Did he pay any money to the evicted man?—Oh, I don't believe so.

31833. You would not consider he paid the price for this evicted holding?—No. I believe whatever he paid it would be only arrears of rent to the landlord.

31834. He did not pay for tenant-right?—He did not.

31835. That is your objection; and you object to his getting the price of the tenant-right?—Yes.

31836. Because if the Congested Districts Board paid him for the tenant-right and restored the tenant it would have to pay twice over?—Yes.

31837. Sir John Colomb.—You said that twenty years ago a Scotchman came?—Yes.

31838. Do you think the tenant was evicted while the Act of 1881 was in operation—had his rent been fixed by the court?—I could not say that. I do not believe that the rent had been fixed by the court. I could not say exactly what time the man had been

* See Appendix to Third Report of the Commission [Cd. 3414], p. 165.

evicted. I would say he came into possession about the early eighties—about 1881 or after 1881.

31839. Then he came into possession while the Act of 1881 was in operation to protect tenants and to enable them to have their rents fixed?—Exactly.

31840. Tell me, do I understand you to say this Scotchman built a house on the place?—I would say he restored and built the house.

31841. Did he do any improvements—was the farm in a better state than when he went into it?—Oh, I believe so. He had capital—the other man had not.

31842. Did the Scotchman bring Scotch labour or was the labour supplied in the district?—I am afraid he was an Irish Scotchman.

31843. Most Rev. Dr. O'Donnell.—We gathered yesterday in that case whoever he is he did not answer the queries of the Congested Districts Board?—It would be hard on him, if he had honestly and truthfully answered their queries. The Congested Districts Board would fight shy of him. I thought it as well you would know of this case, because it was put forward.

31844. Sir John Colomb.—As I understand you, there was a feeling against a man who came here, employed labour, and raised the value of the land with the labour paid for by him. Yet you think that he should not get the advantage of the increased price due to him?—Well, if everything else was all right they would be delighted, but if the foundation was wrong and unjust, no matter what money he would expend there would be no sympathy.

31845. Simply on the ground that it was originally evicted?—Unjustly evicted, I would say. I would not say evicted. There might be cases otherwise, but they would be very rare.

31846. Unjustly evicted, although the Act of 1881 was in operation?—I only speak about the time the man came in. I do not know exactly what time the eviction took place or when the man was evicted. I am not able to say that. I do believe the tenant was unjustly evicted before the Act of 1881.

31847. Chairman.—I gather from what you have said already you are quite satisfied with the action of the Congested Districts Board in County Leitrim?—The only thing I would say is, as Father M'Loughlin said, I would give more powers to the Board and more funds. I think that would be about the sum and substance of it.

31848. Most Rev. Dr. O'Donnell.—You would expect the Congested Districts Board now should pay considerable attention to Leitrim?—Well, I do not believe they ever neglected it when there was a fair case put before them. I do not believe that Leitrim is, after all, exceedingly congested, and I do believe all the cases put before them were fairly attended to.

31849. You think the cases were well considered?—The people are well satisfied.

31850. Chairman.—You see no reason why Leitrim should have a representative on the Congested Districts Board?—I would rather suggest if the Board had an inspector who would go round and see and report on the representations made to the Board by the Parish Committee. I think the result would be as satisfactory as to have a great number on the Board.

31851. You think the present land inspector of the Board is too much confined in certain districts—he does not travel about enough?—I would think that. I know we suffer a good deal from the want of drainage. Our rivers are in a very bad state. Sometimes the houses are flooded, and the people have to leave the houses at night, with danger to their own lives, in the County Leitrim and in the parish I come from.

31852. Would you like to see the Congested Districts Board holding meetings in County Leitrim?—Nothing would be more satisfactory to each district of the county and to the Board itself.

31853. Mr. Sutherland.—Would it take much money to remedy the drainage?—There is one river—it is called the Kilcoo River—running from Kiltyclogher, in the county of Leitrim, to Garrison, County Fermanagh. There are two rocks in this river.

31854. Those are the rocks we heard of yesterday?—It is a different place entirely. I do believe about one hundred pounds would remedy the whole business and do a great amount of good. It would save the arable land along the banks on both sides or banks, and some hundred acres of bog could be drained and reclaimed as a consequence on the Leitrim side. There are two other rivers, surrounded by the only fairly good land in the parish, that do an incalculable amount of damage to the farmers. Some time ago the landlord borrowed money, as was usual for the landlords at the time, at a very cheap rate, with the intention of remedying these rivers. One ran zig-zag for a quarter of a mile where it flows into Lough Melvin. The landlord made a straight bed from the bridge to the lake for this river, thus affording a straight run for the salmon in the spawning season. He intended to remedy the other river which does the most damage by taking a foot and a half or three feet on either side of the bank for a good distance—perhaps for two miles, the whole length of the valley. Some of the people, perhaps one or two, objected. That is one of the reasons why I say that the Board should have, as was said yesterday, absolute power to do whatever they would go in to do—absolute power, so that no one could oppose them. Though the money was borrowed to do this work, nothing was done except to cut a straight bed for the river from the bridge to the lake.

31855. Would those same people object now?—I am sure they would not.

31856. They have seen the need of it?—They have.

31857. Sir John Colomb.—As I understand you, you meant that this farm having been unjustly evicted, it was natural that the Congested Districts Board should refuse or ignore it, and not take up or buy the land—do I understand you correctly?—Perfectly so—that they would not like to have anything to do with it when there was contention and feeling in the country against it. They would say let us settle that amongst ourselves.

31858. Because this land had been at some date in the past unjustly evicted?—And that injustice had been done that had not been repaired.

31859. Tell me this, if that is to be the principle of the Board how would you answer this question. We have it in evidence from several sources that the grass lands of Roscommon are due to clearances and unjust evictions in the past. Do you say that because that is so, the principle is to apply that the Congested Districts Board ought not to touch the land of Roscommon?—Well, I don't know. I think that is a very big question.*

31860. But there is the principle. I am picturing myself on the Congested Districts Board, and having to deal with this question?—I think in this, that is in the Roscommon grass lands, those in possession have prescription and all the rights prescription gives; but in the case of this unjustly-evicted farm, there was no title—he had not paid for the tenant-right—no prescription, for the tenant protested before and after his taking over possession, and afterwards legal societies or combinations, like the old Land League, the United Irish League in his name.

31861. It is just the element of time?—The element of time.

31862. After a certain time the thing must be accepted?—Very probably all the parties have passed away. Very few of them could be had to make the business so glaring as it was even ten or fifteen years ago.

31863. Can you tell me has the case of the evicted tenants of those lands come before the Estates Commissioners now that all these inquiries are being made?—I am removed from it. I am sorry the question was not put to the gentleman yesterday. With regard to the Congested Districts Board speaking of Leitrim, it is peculiarly a county for good butter. Perhaps in the United Kingdom or in Europe I do not believe you would get better butter than in the County of Leitrim, and it came to my mind frequently if the Congested Districts Board put before them to have dairies, to make an allowance or to make grants to have dairies built. Where they are giving grants under the seven pounds valuation—and it was put whether it should not go to ten or fifteen—we have too many applications for what we can get, even under the seven pounds valuation. I think nothing could be done that would benefit the people more than to have dairies built for them.

* *Note by Witness.*—What I meant by a big question was that Sir John Colomb might as well have made a comparison between the case I put forward and the confiscated estates, as between this case and the evicted grass lands of Roscommon.—F. O'H.

Apr. 23, 1907.

Rev. Francis O'Hara.

31864. Most Rev. Dr. O'Donnell.—Cottage dairies?—Yes, cottage dairies.

31865. Sir John Colomb.—You suggest to increase the amount in working cottage dairies through the parish committees?—Yes.

31866. Chairman.—What is your parish?—Ballaghameehan and the Electoral Division of Ballaghameehan. We have two congested districts in it, Rossinver and Glenariffe.

31867. What union is it in?—Manorhamilton.

31868. Any other point you would like to make?—I remember meeting with Professor Baldwin. He was out on the Sub-Land Commission, and he told me that he had been in Leitrim before—perhaps fifteen or twenty years before. It was during Griffith's valuation. He said he knew Ireland very well, but that he did not know any part of Ireland or any county that had suffered so much as Leitrim.

31869. In what way?—From climatic influences—from the nearly constant rain we have in it. He said that the surface of the land had fallen. I could not say whether it was two or three feet from the time he knew it first up to that time. It is the practical experience of the farmers in the country that the land has deteriorated at least a fourth in the last thirty or forty years.

31870. Sir John Colomb.—Am I to understand that there has been such a diminution in depth of soil by falling?—The surface of the land has fallen as if it suffered from an earthquake.

31871. Might that not be accounted for by taking everything out of the land and putting nothing into it?—The late Colonel Tottenham, M.P. for North Leitrim, once said in the House of Commons that the best manure that land could get was to salt it well with rent. If that be so, Leitrim got plenty of it and more. The people of Leitrim are industrious and hardworking.

31872. Mr. Sutherland.—I presume what the professor meant was that denudation by rain had carried away the soil?—No. He meant the land had fallen of itself.

31873. Most Rev. Dr. O'Donnell.—Mr. Sutherland suggests what Professor Baldwin meant was that the lowering had occurred through the washing away of the soil?—I don't know. I don't think that would happen. In grass lands the soil would not be washed away. The substratum of the land might be such that the rain would make the land fall.

31874. Mr. Sutherland.—The drawback is excessive rainfall owing to your having more mountains than other counties?—Yes.

31875. Sir John Colomb.—Do you know if the rainfall is greater in Leitrim than other parts of Ireland?—In the mountainous districts and bog there is bound to be rain.

31876. Chairman.—I am afraid we cannot labour that point, sad as it is?—I only gave it for what it is worth. Though Professor Baldwin was one of the greatest authorities in the United Kingdom, when he gave his decisions and reductions in rent, in every case his decisions were appealed against, and when they came to the Head Commission the rents were raised back again, even on the Professor's decisions.

31877. Sir John Colomb.—He was well known, and had great agricultural experience in Ireland?—That is so.

31878. Was he not looked up to as a great authority upon the economic and agricultural conditions of Ireland?—Yes.

31879. Is it not a fact that he urged on the Government in Committees of the House and elsewhere the importance of establishing some Board exactly like what the Congested Districts Board is now—are you aware of that?—No, I was not.

31880. That is so?—We thought it very strange that when a man with his authority and experience and knowledge would go and give a decision, that afterwards the Head Commission would come in and a party would drive through, never visiting the land and never examining it, and raise it one-half at least of whatever reduction he had given.

Rev Terence C. Connolly examined.

Rev. Terence C. Connolly.

31881. Chairman.—Whom do you represent?—I have been asked to represent Manorhamilton Rural Council here and the fishermen at the Leitrim coast.

31882. What points do you particularly wish to mention?—I wish, as the other witnesses have been doing, to put a few ideas before the Commission. I would like to point out that North Leitrim is a portion of the country that requires the most parental care from Irish public boards. It has been represented again and again that it is a very poor district. In the past, from various causes, social and political and natural causes, it has suffered a good deal, and very little has been done for it. We are losing about 900 per year of our population in North Leitrim, and our average valuation is the lowest in Ireland, I think. We have lost eighty-six thousand (86,000) people from this county since the year 1841. The people in that year were eighty-six thousand (86,000) more than at the last Census.

31883. Most Rev. Dr. O'Donnell.—What is it now?—The population at the last Census was sixty-nine thousand (69,000), and we lost an eighth of the population between 1881 and 1891, ten years. Now, some years ago we had industries in this county. Flax was a very important industry in North Leitrim some years ago. The flax industry has disappeared from us—absolutely disappeared. In the year 1905-06 there were only three acres of flax in Leitrim.

31884. Sir Francis Mowatt.—Is there a market for it when it is grown?—Well, of course, I expect the market follows produce—not produce the market. If you started a market at present I am afraid it would be a very empty affair.

31885. You don't think that flax is produced to sell in the open market, but that the market is created to buy flax?—I don't think so. The sprigging industry was an important industry for women some years ago, but it has almost disappeared.

31886. Most Rev. Dr. O'Donnell.—Is it what you mean to convey that if the flax were produced there would be a market?—Certainly.

31887. Chairman.—If flax were produced without a demand for it it would create the demand?—Yes. If produced here a market would be available.

31888. What makes you think that?—We had nineteen scutch mills in North Leitrim about thirty-five years ago, and not one to-day, as far as I know.

31889. Does not that look as if the demand for home grown flax has fallen off?—Is there not a market in the North of Ireland—in Cavan and Monaghan, and if there it can be here.

31890. There is very much less grown in the North?—But it has absolutely disappeared here, which cannot be said of the North.

31891. It is grown very much less there, and would they not be the first people to increase production if there was a market?—I am not touching on the question of increase, but absolute disappearance.

31892. Would you suggest that people should start growing flax without any sign that they are likely to be able to sell it when grown?—No.

31893. What do you propose?—You assume there would be no demand, which I respectfully deny.

31894. The only point is this, it looks as if every year more and more flax is being imported from abroad as against home grown?—That is true.

31895. That is probably a natural thing, and extremely difficult to check. There may be very good reasons for it?—I lived in Cavan and I saw farmers taking in forty pounds (£40) for an acre of flax.

31896. You know that flax has to be steeped?—Yes.

31897. Did you ever hear that if it is treated in running water it makes the flax much whiter than any treated in a stagnant pool?—I did not.

31898. I am told it is so. Did you ever hear that flax can be so treated in Belgium and cannot be so treated in Ireland?—I heard there was a difference in treatment, but I did not know in what the difference consisted.

31899. The white flax brings a much higher price than the flax that is treated in a stagnant pool?—That I believe to be one of the reasons.

31900. Most Rev. Dr. O'Donnell.—It is said that in some of the northern counties within the last few

years, there is a little revival in the flax industries, and that more is being cultivated?—I think that is certain. There were eighty acres of flax in County Louth last year.

31901. CHAIRMAN.—Have you any record of what there was in County Louth thirty years ago?—No, but I have known it to be in this county, and I think it is a lost industry that might, to some extent, be revived. It is from that point of view I looked at it. There was a kelp industry in the north end of the county. This county has a seaboard of nine or ten miles, between Sligo and Donegal, and there was a very valuable kelp industry which I think has practically disappeared.

31902. Do you know of any particular reason why?—I know the price has gone down very much.

31903. Why?—I don't know, but I suppose something occurred with the market for iodine.

31904. Sir FRANCIS MOWATT.—Did you hear that iodine is now produced from other things?—Yes, I understand so.

31905. And that it is not the most economical way to produce it from seaweed?—Yes, but those people are content with a very small wage.

31906. Is it not the law of modern commerce that things should be produced from the cheapest and most natural products?—Certainly, except one is a Protectionist. But cheap labour has also to be taken into account.

31907. Is it possible to maintain an industry which has to compete in the open market unless you do so?—Well, I think it is an industry that can and is paying a small wage in other districts in Ireland. These people are content with a very small wage, because they have nothing else to do. In the district I speak of the average valuation is about three pounds. They live by fishing, and I wish to point out that for that district nothing has ever been done. It is in the electoral division of Tullaghan, and in the Union of Ballyshannon, and is at the extreme north end of our county, where we have a seaboard which is almost forgotten.

31908. CHAIRMAN.—Of course the kelp industry would benefit a very small number of Leitrim men. You mean those on the seaboard?—Those people have asked me to say a few words on their behalf. There would be about forty or fifty families of them.

31909. Most Rev. Dr. O'DONNELL.—They applied for a boat-slip or small pier?—They have absolutely no place to land a boat in. It is one of the finest places for the fishing industry in Ireland. They have never got anything in the way of instruction or fishing gear, and they have no place to land a boat except to pull it up over the broken rocks.

31910. Have they made up their minds as to the best place for a pier?—I don't know. I think they are a very deserving party. A pier somewhere would be better than nowhere.

31911. Sir JOHN COLOMB.—Are you aware that Mr. Green, the head of the Fishery Branch of the Congested Districts Board was down there recently and made inquiries?—I heard he was down.

31912. Did the people of the district, or you, representing them, see Mr. Green and talk the matter over with him?—They did.

31913. How long ago was that?—I am sure I cannot tell. I expect it would be several years ago.

31914. Not more recently than that?—It is almost that time now. They take haddock and whiting and codfish and lobsters there. They are very skilful men if they got a chance.

31915. Most Rev. Dr. O'DONNELL.—You know that locality well?—Yes.

31916. Do you consider that a work of the class that would suit these fishermen, would be very advantageously placed near Tullaghan?—Yes. I think it could be economically made at Tullaghan or near it.

31917. You are aware there has been some difference of opinion, locally, as to the place?—I am, but I daresay they would leave it to competent authority to decide.

31918. Has the county surveyor ever been there to pronounce an opinion?—I do not know that. We have, in North Leitrim, a very valuable coal mining area, and it is absolutely, I may say, undeveloped. I think it is a most important and serious thing for it. You could get very good coal for ten shillings per ton at the pit mouth. It is about sixteen miles from where we are sitting (Manorhamilton), going to the south. There are fourteen hundred acres of mining rights. Except what one enterprising man is doing, there is absolutely nothing done. He is giving employment every day in the year to thirty men. While you can buy coal at the pit's mouth for ten shillings, we have to pay twenty-one or twenty-two shillings, because we have to get it drawn sixteen miles.

31919. Sir JOHN COLOMB.—That is the same company Mr. Hewson gave evidence about—Arigna?—No. I presume Mr. Hewson was speaking about a company you are likely to hear about in Carrick-on-Shannon. I am speaking of North Arigna, which is really the best coal and a very important industry.

31920. CHAIRMAN.—I suppose coal from Arigna goes that way?—Yes.

31921. You want some transit facilities down to this side?—Yes, very much down here.

31922. So as to bring the coal this way?—Yes, in North Leitrim on to Irvinestown, and Tyrone, and Enniskillen, which is a place where a good deal of coal is wanted. There would be a market to Fermanagh.

31923. Sir JOHN COLOMB.—What is the distance of the coal from Manorhamilton?—Sixteen miles.

31924. Mr. O'KELLY.—You have not a railway to Arigna?—There is no railway in North Leitrim.

31925. At all?—Practically. The Sligo and Northern Counties line runs by here.

31926. How far is the nearest railway station?—Manorhamilton is a station.

31927. Was there not a proposal to connect Arigna with some local town?—There is a proposal to connect it with Dromahair. Personally I do not believe in the soundness of the scheme, but a good many clever Leitrim men do. I should be sorry to see it go through.

31928. Did not the Government propose to give a grant, conditional on local assistance being forthcoming?—Well, I am not aware.

31929. In the shape of a guarantee?—Even if they did they will give no guarantee in this county.

31930. Would the people affected on the proposed line of route give a guarantee?—No.

31931. The result is they have to give more for their coal. What was the proposed guarantee?—I really do not know.

31932. In County Mayo we have several of our lines guaranteed, and the amount is not very great, while the compensating advantages to the people can hardly be measured?—There is a great deal of turmoil about the guarantee for the Cavan and Leitrim Light Railway.

31933. Do you think if the matter were put impartially before the ratepayers, or before those who would be interested in having the railway constructed, and if the loss would not be very much, that they would agree?—They would, but I presume the men going to America and England and Scotland see railways can be run without poor farmers putting their hands in their pockets.

31934. CHAIRMAN.—Arigna is a terminus?—That is the company at the south.

31935. The Cavan and Leitrim end?—The railway ends in a bog, away about two or three miles from the coal.

31936. As the crow flies from Sligo to Manorhamilton, on which side?—All the pits are to the south of Manorhamilton, sixteen miles south from here. Of course the railway passes just here, but it could never do any good for that district.

31937. Sir JOHN COLOMB.—I see Leitrim pays six thousand seven hundred and fifty-nine pounds (£6,759) for guarantees of railways and harbours?—They are in a very perfect state of contrition about that. They will never do it again. That is just the reason they will never do it again—they did it once.

31938. They won't do it again?—You may guarantee that.

31939. CHAIRMAN.—Where would you like to see the railway?—Coming down from Drumkeeran to somewhere about a mile to the west of Manorhamilton, and down through Glenade to Bundoran, or through Ballaghameehan to Belleek.

31940. Carried on across the other line?—Yes.

31941. The shortest point would be Dromahair?—Yes, but when you got there you could get no further, because you have two big ranges of mountains. Besides, I don't see the use of coal carried over rail

Apr. 23, 1907.

Rev. Terence C. Connolly.

competing with that obtained over water. You will not sell it in Sligo.

31942. You would like it to Drumkeeran and on to Kiltyclogher?—It would not go so far to the east.

31943. Is that the route which this county as a whole would support?—Well, the matter has not yet been put before them very clearly. It will be for it if it comes to practical work.

31944. Mr. O'Kelly.—I see here, in the Statistical Abstract for the county,* you pay six thousand seven hundred and fifty-nine pounds (£6,759) for railway guarantees to make up a deficit?—Yes; the Cavan and Leitrim line.

31945. And you get back in the shape of a contribution from the local taxation account four thousand two hundred and ninety-five pounds (£4,295)?—Yes.

31946. Is that guarantee spread over the entire county?—Over the benefiting area.

31947. How much is it in the pound?—I don't know.

31948. About a shilling in the pound. If it were spread over the county it would be almost infinitesimal?—I have given some thought to what I consider the wants of North Leitrim. We want a railway something like the one I have outlined. The roads are in a very bad state. No county in Ireland would benefit more by some such scheme as Lord Iveagh had in his head.

31949. Chairman.—The motor scheme?—Yes; the motor scheme. We want re-afforesting in North Leitrim. I think it is one of the poorest——

31950. You remember the reason Lord Iveagh's scheme broke down was because the roads were so bad. The County Councils could not spend enough money to put them in order. They could not run up taxation?—We paid five shillings and eleven pence (5*s.* 11*d.*) last year for houses.

31951. How would Lord Iveagh's scheme benefit the roads?—Agricultural produce could reach markets.

31952. But not the roads. He pre-supposes the roads are improved?—Oh, certainly. I am pointing out one of the evil effects resulting from bad roads. I am afraid our County Council will not be able to induce the ratepayers to put the roads in better condition.

31953. Mr. O'Kelly.—To accommodate the roads to the scheme you will have to make an enormous expenditure?—Yes.

31954. In our own county it was proposed to run a service from Ballina to Belmullet and it would cost twenty thousand pounds (£20,000) to put the roads in repair?—I think the few main roads might be put in order. We don't want to do every little scrap of road in the county. I think the few main roads would be enough for some time.

31955. Sir John Colomb.—Is it not the case that the County Councils can borrow money at a low rate of interest?—Yes, but I suppose the interest has to be paid by the ratepayers. That is a way of running up the rates.

31956. I make out from the returns that the poor rates are a little lower. The rate is lower than from 1881 to 1891?—In this county, a little.

31957. The poor rate, certainly, by the figures?—It is one consolidated rate now.

31958. I know, but do you contend that the rates are a great deal higher now than they were?—I don't put it that way. I say at present they are so high that it will be impossible to induce the ratepayers of this county to allow them to go any higher for the benefit of the roads. You will find in Thom's Directory we are supposed to have fifteen hundred (1,500) acres of forest in North Leitrim, but I don't know where they got them. I say it is one of the things we want most—a scheme of reafforesting. There is very little drainage here.

31959. Chairman.—Do you think it would be a good plan?—It is very wet, very damp. It is exposed to the sea. We are within twelve miles of the sea.

31960. Do you think the planting of trees would lessen the rainfall?—No; but the bad results of the rainfall. It will give shelter to cattle and make the country more liveable and help the drainage of the district, the natural drainage. In other words, if you get the land covered with a good piece of forest the roots of the trees have a good deal to do with keeping the district open.

31961. Most Rev. Dr. O'Donnell.—They absorb the moisture?—They say it is a good thing for the public health.

31962. Chairman.—It tends to increase the rainfall?—I am not saying it has any effect on the rainfall, but on the evil effects which follow from rainfall.

31963. Would you suggest that there should be a number of small plantations or a few large plantations?—I would suggest that there should be large ones. Of course, if you asked would I have six large ones instead of twenty small ones I would rather have twenty small ones than the six.

31964. Would you take a hillside and plant the whole of it?—Yes. I would be glad to see the hillsides from the county road covered to the heather. If we could run pieces up of about two acres across I think it would be a magnificent thing. We have no wood in this county. If we want to do anything in the wood industry we are lost.

31965. Sir John Colomb.—The land you propose to plant is on the hillsides?—Yes.

31966. That land is now used in some way, cattle and sheep running on it?—It is. It would be very easy to clear it for this purpose.

31967. There are tenants now using it?—Yes.

31968. You do not apprehend any difficulty over compensation to them?—Not the slightest. You will find some tenants who are public-spirited enough to allow the work to be done and facilitate it without any compensation whatever.

31969. I see there is a great deal in this return of what they call untenanted land on these mountains. That is to say they are sheep runs. Have you gone into this subject deeply enough to be able to know whether it would be likely that trees would pay better than the sheep?—Well, the sheep are not paying, for we have not got them. It is marvellous how the sheep in North Leitrim have gone down.

31970. Are not these mountain tracts occupied with sheep?—To some extent, but the sheep are not doing well on them. The total number of sheep in Leitrim last year was thirteen thousand. There is no other county in Connaught can compare with it. Galway had five hundred and seventy-seven thousand; Mayo, three hundred and six thousand; Roscommon, one hundred and sixty-five thousand, and there is Leitrim with thirteen thousand.

Sir John Colomb.—Thirteen thousand nine hundred.

31972. Chairman.—Are there now fewer sheep than formerly?—Nearly a thousand of a fall last year. We lost a thousand from 1905 to 1906.

31973. Your opinion is these mountain slopes would be more profitable in trees than in any sort of stock?—I do not say that, but I say even for the sheep-walks it would be much better to have one-fourth of the surface in trees, and we will have wood and better sheep.

31974. Most Rev. Dr. O'Donnell.—Better shelter?—The locality will be sheltered for all stock.

31975. To what do you attribute the small number of sheep?—I do not know what to attribute it to, but unfortunately the question can be asked of nearly all our agricultural resources.

31976. Sir John Colomb.—Must you not take it relative to the amount of land. For instance, in Roscommon and Mayo the area is bigger and the land more suitable?—There is no proportion, even relative, between the number of sheep in the counties named and Leitrim.

31977. You worked it out?—Yes. Take County Leitrim. In turnips we had three hundred acres less than the year before, seven hundred and eighty-one acres of turnips in the whole county. In the whole county we had only two hundred and seventy-one acres of mangel. We lost a thousand acres of cabbage from the year before. We had three acres of vetches, and one fine acre of rape! And our total number of acres of flax was five in the County Leitrim. Now, coming to the stock in Leitrim we lost a thousand in the number of sheep. The total number of horses in Leitrim last year was five thousand; Galway, twenty-eight thousand; and take County Roscommon, eleven thousand.

31978. Chairman.—You have not got the number of horses before?—We cannot have the horses they have in Roscommon.

31979. It is difficult to compare one county with another?—It is, but where you see such a relative difference——

31980. Has there been a falling off in horses?—Not a falling off. There are two hundred more, but

* See p. 352.

we have only four thousand seven hundred and ninety-nine. It is the one thing we have an increase in, but still it is an extraordinarily small number. There is no other county in the province has less asses—that is a sort of consolation.

31982. How about cattle?—The total number of cattle has gone up. Three thousand last year—that is horned cattle. Now, take the pig industry. The bacon industry used to be a very important industry in this county, and still could be made a very important industry. The total number of pigs in Leitrim is twenty-four thousand, nearly twenty-five thousand. And take a county like Roscommon, which is largely grazing, where they had thirty-eight thousand in it.

31983. Sir Francis Mowatt.—Did you say the pigs had fallen in County Leitrim?—Not fallen, but there is no comparison in the number. The number of pigs has gone up nearly a thousand from the preceding year.

31984. Mr. Sutherland.—So that there has been no increase except in the case of horned cattle and pigs and horses?—Yes. What I am arguing principally is the absurdly low number still.

31985. But unless you take the conditions of the county into account there can be no comparison?—But really Leitrim should have as good a pig industry as any part of Ireland.

31986. Most Rev. Dr. O'Donnell.—If agriculture were more prevalent pigs would have a better chance?—Yes.

31987. Sir John Colomb.—Taking comparison between Leitrim and Mayo and Galway do you recognise that Galway is three times and Mayo five times the size of Leitrim?—Yes. Of course, I recognised that, but you have some of the worst bog and tracts of the worst land in Ireland in County Mayo. We have no big tracts of bad land here. We have little lots. There is great need of instruction on manuring in this county, to my mind. We have a lot of very grey hills in this county, they are hardly green hills at all. They are actually white, bleached, and there is a great deal of land that is not economic, simply because it is not properly drained and manured. I believe it would turn out properly if drained and manured. I am afraid the people do not understand much about artificial manures.

31988. You attach the very greatest importance to the drainage work of the Congested Districts Board and the raising of the knowledge of agriculture among the small occupiers and labourers?—It is a vital matter.

31989. I agree with you?—We had a large number of corn mills in North Leitrim forty years ago, and I don't know that there are more than two or three to-day. You see the number of acres of oats we have, seven thousand, and that is five hundred acres less than the year before.

31990. Mr. Sutherland.—Of course the mills go along with the decreasing growth of corn?—Yes.

31991. Sir John Colomb.—They are gone long ago. The corn mills have disappeared all over Ireland within the last forty years practically. You see ruined corn mills all over the country?—I don't care in how many counties, it will never sanctify the principle. I think it is a very serious thing for the country—the idea of a man going to buy from foreign countries what he can get from his own farm. A farmer will come into this town and he will sell a dead pig at a price I made up to be fourpence farthing ($4\frac{1}{4}d.$) per pound, and he will cross over to a shop and bring home a piece of Canadian bacon at sixpence halfpenny per lb. That brings me to another point. I do not wish to touch on politics here, but this is a matter that really is as much economic as political. The people of North Leitrim have been bled white with rackrents in the past. It was the most rackrented district in Ireland. I make the statement, and I question if in any other part of Ireland the Land Courts were obliged to reduce the rents so much as in County Leitrim. Therefore, the Leitrim farmer has not the capital. Talking about the pig, if you asked the farmer why he did that for stuff not half as good, his reply would be, "I got three or four pounds of ready money, and the shopkeeper will do without the money for half a year." Hence I think there cannot be too much done in North Leitrim for giving people capital, to buy manure, to work up their little agricultural industries, to do drainage at a cheap rate.

31992. Would you work such a system through the Parish Committeess?—By the Congested Districts Board.

31993. Through the Congested Districts Board, of course, but then, as the county machinery for doing those things, do you think the Parish Committees would be the best?—I certainly think as far as they could act in the area within their ambit, but you will find very poor and deserving men not in the scheduled area at all. I think this is a thing Parliament should be asked to look to at once. Take this Manorhamilton Union—out of twenty-two divisions we have, I think nine of them are scheduled as congested. You will find that a poor lot of men in a division cannot get a farthing from the Congested Districts Board because they have the advantage of living in contiguity to a few rich men. That is a most absurd state of affairs—five or six well-to-do men, who may be professional men, and because they are living in a division with a lot of poor men nothing can be done for the poor men. Such is the way to penalise people for living beside the rich man. I think it would be a most important thing that the Congested Districts Board would be given money and given powers to work everywhere in a county with the farmer who is under a certain valuation.

31994. Mr. Kavanagh.—You have certain agricultural credit societies in this county?—Yes.

31995. Had you any experience of them?—I have a little experience. I think they do a great deal of good, but they are a very small affair.

31996. You have ten?—They are very small, however.

31997. There is one in this locality?—Within about two miles from here.

31998. You recognise the want of credit to the Irish farmer?—Yes.

31999. Why not start one in this locality?—Yes, but you see the amount of money you could handle in one of these is not very great. Besides, there is a great deal of trouble over it. Down here the priest must do everything. He must run the banks, run the creameries, and sale of the estates—why, the fact is the priest should not go to bed at night.

32000. We all recognise you do a great deal of labour for people?—You have no money to pay officials. If the priest does not do the work there will be a man wanted, and you would have to pay him perhaps a hundred pounds.

32001. At the same time you recognise they do a great deal of good?—There is no better spent money.

32002. Most Rev. Dr. O'Donnell.—You will come to the sale of estates later?—The tenants on eight estates in this county did me the honour of making me chairman, and we negotiated the sale of these eight estates within the last ten years.

32003. That is a sample of the work that falls to a clergyman to do for the people?—Yes.

32004. Sir Francis Mowatt.—Did you say negotiated or carried through?—Carried then through.

32005. Most Rev. Dr. O'Donnell.—Have you a Parish Committee, and, if so, how is it working?—We have, and it is doing very well.

32006. Do you think Parish Committees are on a good basis?—I do so, but I think it is a great pity while we can help "A," we cannot help "B," his neighbour, who is as badly off.

32007. You think the system by which the areas are scheduled is indefensible?—It is positively mortifying, simply because of that absurd arrangement that I have mentioned. The Congested Districts Board have given us in County Leitrim, I think, within the last five or six or seven years very nearly five thousand pounds. There is no one will deny we would be glad to have got more—and we should have got more. I believe more good has been done by the contributions from the Congested Districts Board in North Leitrim than by twice that amount by the Department of Agriculture and Technical Instruction. I would be very glad to see the Congested Districts Board getting more money and getting wider areas in this county, and to see them holding meetings sometimes in the districts and getting the views of local men who are moving about and giving some thought to these subjects. I think it should also be pointed out that the Congested Districts Board as far as we are concerned has administered this money very economically. In some cases I have seen every farthing of the cheque reaching the poor man, not a

Apr. 23, 1907.

Rev. Terence C. Connolly.

penny stopped for administrative expenses. Now, that is a very remarkable thing, and no other Board in Ireland can have that said of it.

32008. Sir FRANCIS MOWATT.—You mean no salaries are paid to officers for carrying out the schemes of the Congested Districts Board?—Oh, there are.

32009. Would you not call that expenses of administration?—The statement made was that I have seen cheques coming to his county, and that they reached the people they were intended for without a penny subtracted for administration.

32010. Most Rev. Dr. O'DONNELL.—You alluded to the Parish Committees?—Yes. I think they pay an engineer, but it is very small.

32011. The total cost of administration is cheap?—Yes.

32012. You have supervisors?—Yes, there must be one in each Parish Committee, but of course one man can do ten of them.

Most Rev. Dr. O'DONNELL.—Yes, that is quite so. Each committee must have a supervisor, but one supervisor may do several parishes.

32014. CHAIRMAN.—Do you know how many supervisors there are in the county or what their salaries are?—I don't know the number, but I understand that they are paid 10 per cent. on the grant.

Sir FRANCIS MOWATT.—That will be practically about nine pounds to the Parish Committee.

CHAIRMAN.—Don't they have bicycle fees?

32015. Most Rev. Dr. O'DONNELL.—Sometimes the salary and allowance are paid direct from the Board. Sometimes they are paid partly out of the grant, and partly out of the Board's contributions. Then there is generally a bicycle allowance. In Donegal a sum is given to cover locomotion?—I would say more about that North Arigna coalfield, but the other gentleman who has been asked to speak for the District Council comes from that district.

32016. You have written about this county, and have a very intimate knowledge of its industrial condition—is there anything special you would suggest could be done to improve the general condition of the people?—I think I have touched on everything I care to touch on. There are other gentlemen who will make some remarks to you about getting the waste lands cut up. There are a few big places that should be cut up. I think in these remarks I touched on what is of great importance to industries which are the most suitable for this county and which are based on agriculture.

32017. You consider agriculture as such requires the closest attention in North Leitrim?—I do, and industries based on agriculture. I am afraid for factories we have not the raw material.

32018. I was waiting to hear from you whether you considered that for girls there should be such a home industry such as lacemaking?—There should. I was one of the men who committed what some call the sin of doing what I could to start the co-operative creameries. I spent a good many hard days at it. The idea was where a girl was deprived of the industry of churning she would be turned over at once to a cottage industry like lacemaking or sprigging, or something of the kind. I think that matter has not been sufficiently followed up, simply because after the Department of Agriculture was started those who had asserted it before said, "There is enough money now; we will do nothing." The Department are doing it in a sort of way.

Mr. MICHAEL KEAVENY examined.

Mr. Michael Keaveny.

32019. CHAIRMAN.—Where do you reside?—At Spencer Harbour, Carrick-on-Shannon.

32020. Are you a farmer?—Yes, I would like to put before you the condition of the different districts I represent and their poverty, as well as the poverty of North Leitrim generally. In the parish I represent there are three hundred and ninety-five holdings under seven pounds valuation. There are three electoral divisions in the parish congested—Mahanagh, St. Patrick's, and Arigna. Drumkeeran is within the parish and not scheduled as congested, but should be. In those three congested (scheduled) divisions there are three hundred and ninety-five persons with holdings rated under seven pounds. There are one hundred and nine rated from seven pounds to ten pounds, and a total of five hundred and four rated at ten pounds and under. And in the other division in the parish, not scheduled, there are three hundred and fifty-five ratepayers of a valuation of ten pounds and under, which, I think, it is very necessary to have scheduled as well as the other as there are just as poor parties living in Drumkeeran division as in any of the others. A lot of the holdings are valued from two pounds to thirty shillings, and some as low as five shillings.

32021. Sir JOHN COLOMB.—The valuation you speak of includes houses and land?—It does. I would also like to bring under your notice the division of Garvagh, a very poor district, and the district which I represent on the County Council. The holdings in Garvagh below seven pounds valuation number one hundred and three.

32022. Most Rev. Dr. O'DONNELL.—There are ninety-three rated under four pounds?—In the electoral division of Killanummery there is a number of non-residential holdings. The number of registered occupiers is two hundred and twenty-seven holdings; area five thousand one hundred and thirty-eight acres; valuation, eighteen hundred and eighty-two pounds. Of those two hundred and twenty-seven, seventeen are non-residential holdings containing upwards of seven hundred acres and five of which hold three hundred and ninety-five acres valued at two hundred and fifty-five pounds ten shillings.

32023. Sir FRANCIS MOWATT.—Does that include the mountain sides?—It does. Forty-nine holdings are valued at an average of twenty-four pounds three shillings and five pence; one hundred and seventy-eight holdings at an average of three pounds nineteen shillings; the average value of two hundred and twenty-seven is eight pounds five shillings and ninepence; the average value of two hundred and twenty-two of those is seven pounds six shillings.

32024. CHAIRMAN.—Are those in scheduled districts?—No, and that is where Father Connolly's argument would come in very forcibly. There are a lot of people who are unfortunate enough to live beside large landholders and they are deprived of any benefits from the Congested Districts Board because they happen to be living close to large farms.

32025. And while the poverty is as great as in the scheduled area, it is not scheduled owing to the proximity of farms of high rateable value?—Yes. I would suggest that in the case of those farms any of them that would be ever sold should be bought up by the Congested Districts Board to provide farms for the parties who are living in congested areas.

32026. What sort are those farms?—Non-residential. Some of them under grass, and nobody living on them.

32027. Except a herd?—He might be there.

32028. Are they in the hands of tenants?—Yes. I think there are one or two farms that are for sale there. I think there was an application made to the Congested Districts Board to buy a farm, but they declined to buy.

32029. Is there any one big landlord there?—I could not tell. There is one hundred and thirty-eight acres belonging to Mr. Hamilton. I think it is for sale, and very convenient to the congested district. I think it would be very advisable for the Board to buy it and supply some of the poor fellows who are living there.

32030. Sir JOHN COLOMB.—You mean the Board should come to arrangements with the owner to sell?—I may say he is prepared to sell.

32031. You know it?—Yes.

32032. You, thinking that farm ought to be bought by the Congested Districts Board, knowing the owner and knowing that the owner wishes to sell—can you tell me if the owner has written offering to sell?—I have a wire here from the Congested Districts Board refusing to buy. "Rev. Father Briody, Ballingar, Dromahair. Telegrams received. No particulars here as to the farm referred to, but Board would probably not purchase if holding is not on one of their estates."

32033. Most Rev. Dr. O'DONNELL.—Who is willing to sell?—The Misses Hamilton, the tenants.

32034. Is the landlord willing to sell?—I could not tell you.

32035. CHAIRMAN.—You have got a good deal of mountain land?—Yes, hundreds of acres.

32036. A good deal in Killanummery?—I think there is a wonderful lot in it.

32037. Most Rev. Dr. O'DONNELL.—I understand that farm you referred to just now, is sold under one of the Purchase Acts?—I believe so.

32038. Then if it did not require the staff of the Congested Districts Board to work at a great distance from their present operations, you consider it would be a useful purchase for them?—I consider it would.

32039. You would understand that it is an expensive thing to work a property like that at a great distance from the other work of the Board?—I admit that.

32040. So that you should like to see the Board take up a good deal of work of that kind?—There is nothing I like so well. I might draw your attention to a farm in St. Patrick's that was for sale by auction, but there were no purchasers. It was held under the Land Commission The people are so poor around there there were no persons to buy it. If the Congested Districts Board were to buy it it would be very useful in the district. It would give a farm to one or two poor people.

32041. Sir JOHN COLOMB.—When you say an auction do you mean of the tenant's interest?—Yes, the tenant called the auction.

32042. And the people were too poor to offer to buy the tenant's interest?—There are no people in the locality able to buy it. There are seventy-seven acres in it.

32043. Are there not any well-to-do shopkeepers there buying land?—They did buy a good deal of land in times gone by, but I think the times are going hard with them. The farmers are going to the bad and the shopkeepers had to go with them, I think.

32044. Mr. KAVANAGH.—You think as small holdings it would sell better?—Yes, if it was split up.

32045. Sir JOHN COLOMB.—Was it sold?—No; there was one bid of two hundred and eighty pounds.

32046. What was the rent?—About twenty pounds. I would suggest in order to relieve congestion in the districts that some amount of employment would be found for the people in such districts.

32047. Mr. SUTHERLAND.—What do you suggest?—Well, I don't know what I might suggest. I am not a very good judge of those things. The Board is doing important things in other parts of the country. I see a lot of factories getting assistance from the Board, and if they came to our relief now for a few years a considerable amount of good could be done.

32048. Most Rev. Dr. O'DONNELL.—Is there a large number of girls without employment?—Yes, a very large number.

32049. They have not sprigging or lacemaking?—No. They have to emigrate to America.

32050. Where else?—Sometimes to Australia.

32051. They do not go to England or Scotland?—Very few of them.

32052. Take the men—except the land is there anything you would suggest for them?—Well, there is one thing I would suggest, if the Board would make a line from Drumkeeran to Arigna for us. We have a large quantity of plaster of Paris in St. Patrick's. It could be very profitably wrought. We have some of the finest fire-clay, and if there was some encouragement for manufacturing it it would be very useful in our locality. We had a very extensive industry in that way ten or fifteen years ago, but it failed.

32053. Sir JOHN COLOMB.—Do you know why?—I think I partly know anyway. The company were doing splendidly, and they were not satisfied with the work that they had manufacturing bricks and tiles and all kinds and classes of pipes until they set up a public-house in it, a beer shop for porter and ale, and they failed in consequence of starting such a foolish thing.

32054. Most Rev. Dr. O'DONNELL.—The company you say?—I think it would be a flourishing industry only for that.

32055. Sir JOHN COLOMB.—So the bricks paid and the beer did not?—There was nothing done right after that.

32056. Most Rev. Dr. O'DONNELL.—The drink drowned the bricks?—It certainly did, and very nearly more than the bricks. I think if an industry of that kind could be started again it would pay well.

32057. Mr. SUTHERLAND.—Were those bricks exported?—They were, sir, in a very poor way. We had no train accommodation or no railway.

32058. The people of the country would build of stone rather than brick?—Yes, but if it was started now on account of the line going to Arigna it would not be so expensive to carry out the work, and it would not be so expensive to send them to Ballinamore and on to Belfast.

32059. What fuel did they use?—Coal.

32060. Had it to be imported?—Oh, no, we had it in the locality. The company was started at Spencer Harbour. We had Lord Spencer there to christen the harbour. It is on the shores of Lough Allen.

32061. Sir JOHN COLOMB.—Did they make pipes?—Yes.

32602. Did the farmers use drainage pipes instead of stones?—They did, a great many of them.

32063. Did they find them cheaper and better than the stones?—Yes.

32064. There was the demand?—Yes, there was not one left. They had two large steamers, and they sent them on to Limerick.

32065. If the proprietors set up a public-house in addition to the works that were going on successfully, and when they found it was ruining their success, why did they not shut it up?—The farmers had no authority. The company was making the money and they were all strangers.

32066. CHAIRMAN.—Not local men?—No, they were strangers. The farmers of the locality had no control.

32067. Sir JOHN COLOMB.—Certain people—strangers—came up and started an industry of brick and tile making?—Yes.

32068. The company was going on successfully?—At least they appeared to be.

32069. These men got a licence and established a public-house?—That is so.

32070. Then they began to lose their money, business began going from them, and why didn't they abandon the public-house?—I don't know why they did not abandon it.

32071. Is it not a rather funny thing that men putting their money in and getting a profit back should do a thing to lose their money?—Yes.

32072. Most Rev. Dr. O'DONNELL.—Perhaps men under the company rather liked the drink themselves?—It is one of the things I cannot tell.

32073. Sir FRANCIS MOWATT.—Is the public-house there now?—No, the whole thing is away.

32074. CHAIRMAN.—What were the steamers for?—The steamers carried large quantities of coal on by the Shannon to Limerick, and they came up Lough Allen.

32075. And they took away bricks?—Yes.

32076. Most Rev. Dr. O'DONNELL.—Have you a Parish Committee?—We have.

32077. What are they doing with you?—They are doing very well, but they would do a lot better only their funds are so limited.

32078. They are not allowed to work outside the scheduled area?—No.

32079. Is it at the houses they are working?—Fencing and drains and buildings.

32080. CHAIRMAN.—Is there anything else?—I would like if you would increase the funds of the Parish Committee in any case by three or four times more if we got nothing else, to four or five hundred per year.

32081. Sir FRANCIS MOWATT.—Increase the money grant to them?—Yes. At present we have three hundred and nine-five parties entitled to a share of the grant, and when a hundred pounds is divided amongst them it is not much.

32082. Most Rev. Dr. O'DONNELL.—I think it was represented that in Mahanna and St. Patrick's the completion of a chain of roads would have been a great advantage?—It would, sir. We are at a great loss for roads.

32083. Was there a very considerable sum that was offered as a subsidy?—There was.

32084. What I want to ask you now is, knowing the locality as you do, which would be the better expenditure? Money in aid of the construction of the roads, or money to increase the funds of the Parish Committee?—I think where we are so backward we could do with both. We only got nine hundred and thirty-two pounds for the construction of the roads in

Apr. 23, 1907.

Mr. Michael Keaveny.

County Leitrim, at least in Manorhamilton Union, as long as I know to 31st March, 1905.

32085. Didn't you have a subsidy for that chain of roads which would nearly come to nine hundred pounds?—I don't know.

32086. I think it would be well over seven hundred pounds?—All that Leitrim got for the making of roads from the Congested Districts Board since it was formed was sixteen hundred and seventy-four pounds, while Donegal got twenty-six thousand nine hundred and ninety-two pounds.

32087. There was two thousand pounds not taken up in Leitrim that was offered?—The reason of that was the people are so overtaxed in this union they could not accept; they could not undertake to go to any further expense as far as the ratepayers were concerned. The people are so poor and heavily taxed they cannot accept an offer like that.

32088. Mr. SUTHERLAND.—The Donegal people evidently do undertake the conditions?—There is no mistake if the ratepayers of the country could afford to lose a pound for the hundred you would give they would be delighted to take it, but they cannot afford to pay the present taxation. You don't know the poverty of the people.

32089. We saw poorer parts of the country than this?—I am quite sure North Leitrim is the poorest part in Ireland.

32090. Most Rev. Dr. O'DONNELL.—In the early days of the Congested Districts Board it did not demand a local contribution to the same extent as it does now. Latterly it has insisted on this?—The money must be lying when we did not get it. We should get it still. The Parish Committees in Donegal got two thousand five hundred and fifty-three pounds, and in Leitrim we got twenty-one pounds in 1905.

32091. In the following year how much?—I have no later amount than 1905.

32092. I think you will find in 1906-7 that there was about fifteen hundred and fifteen pounds earned?—The amount of grant offered——

Most Rev. Dr. O'DONNELL.—For the year ended 31st March, 1905, the grant to Parish Committees was seven hundred and twenty-nine pounds eighteen shillings and tenpence; in 1905-6 a thousand and ninety pounds. But your main contention is right, namely, that there has been a comparatively small expenditure on works in Leitrim.

32093. Mr. SUTHERLAND.—Could you usefully employ more money if you got it in the Parish Committees?—Delighted to get it and work for it as well. The people are very much inclined to earn the money if they could get it.

32094. Is it a better way than giving it in support of industries that won't support themselves?—I say it is a very good thing.

32095. Is it the best, do you think?—We are greatly satisfied with the Parish Committees of the Congested Districts Board if we could get something worth taking, but we cannot get anything worth taking.

32096. Starting industries that no one knows may succeed is a speculative thing. It is of no use if an industry is started and kept artificially going. It is really of no permanent use. It is like the other things that have stopped?—A good deal of that would depend on the parties that had the management. I believe if the same chance were got in our country again the parties would not be allowed to do such things. We would give them all the help we possibly could.

32097. How could you oppose this company stopping the iron works—take that case?—We could not and we would not ask.

32098. What is the good of starting an industry that has to be artificially supported all this time?—I do not think it would have to be artificially kept on.

32099. You would not want that done. If you got money for spending in the Parish Committees you would spend it usefully in making permanent improvements?—We certainly would.

32100. You think the money given to the Parish Committees is better bestowed?—I say it is very useful money. It is the only thing we know. We have not anything else.

32101. After the land is it the best?—I would say it is. I am not prepared to give you an answer on the other things, because we have no industry in the locality.

32102. You would be willing to get an additional grant and to start those industries also?—Yes, if possible. We have some little industry in Tarmon, where the farms churn their own milk at home and send the butter to be manufactured. It is a little industry. We are wonderfully poor, and we applied to your Board to assist us, and you would not give us anything.

32103. Mr. SUTHERLAND.—What do you propose to make—is it a separate creamery or to make small dairies, such as his lordship was speaking of?—

Most Rev. Dr. O'DONNELL.—I think it is a creamery you have?—No, the people churn their own milk and send in the butter to be salted at one place.

32105. Most Rev. Dr. O'DONNELL.—It is a sort of butter factory. The butter is sent in and improved and made to a certain quality?—Yes.

32106. Sir JOHN COLOMB.—You send it away in firkins?—In fifty-six pound boxes.

32107. Sir FRANCIS MOWATT.—Salt butter?—Yes.

32108. Mr. KAVANAGH.—Does that work better than the creamery?—The locality is so poor I think it does. The place is so poor and hilly they could not possibly get their milk to the roads, and the creameries are very far away from us.

32109. Most Rev. Dr. O'DONNELL.—It is a butter factory?—Yes.

32110. Mr. KAVANAGH.—You have creameries in this locality?—Not within nine or ten or eleven miles—ten miles the nearest.

32111. Sir JOHN COLOMB.—Tell me, as to the work of the Parish Committees, have you not done a good deal to improve the sanitary conditions?—Yes.

32112. Removing manure heaps, and so on?—Yes, that is the first thing that has to be attended to.

32113. I see in the Union of Manorhamilton you are spending fifty pounds annually on sanitary officers whose business it was to see that done. Therefore the rates and the State are paying £50 to get work done while the Parish Committee is getting money from the Congested Districts Board to do the same thing. Do you think that is a good or useful system where the taxes are very heavy and the people very poor?—I am not aware any people get any money for removing their manure heaps from their houses.

32114. Have the manure heaps been removed by the Sanitary Officers under the law and under the authority of the Rural District Council, or is it by the efforts of Parish Committees?—No, sir; it is one of the conditions of the Congested Districts Board any man will not get a grant if the manure heaps are not a certain distance from his house. It is not costing anything to the Congested Districts Board.

32115. You do not give the men a little money to remove the manure heap?—No, sir.

32116. Do these sanitary officials do anything at all?—They do a good deal. They do something anyway.

32117. Mr. SUTHERLAND.—What do they do?—They travel the country and see that the manure heaps are a certain distance from the houses.

32118. Make farmers remove them?—They do. I would like to impress on you about a railway from Dromahair to Arigna. We have fourteen hundred acres of land untouched for want of railway facilities.

CHAIRMAN.—I don't think you need go into that.

32120. Sir JOHN COLOMB.—I suppose you are a farmer yourself?—Yes.

32121. Is it your opinion that tillage is going down in the country?—I would say it is.

32122. Is it because it pays better to have the land in grass?—It would be better to have it in constant tillage, but the people are so poor any man or boy or girl has to go away to a foreign country to make a living.

32123. Want of labour?—Want of labour.

32124. It is not the price of labour?—Exactly, sir, want of labour.

32125. Mr. KAVANAGH.—The labour is going away in emigration?—You would not want the people to die of the hunger.

32126. Could they not make a good living by tilling the land?—They could not, the farms are so small and the land so bad, and the season turning against the people. I may give an instance of what happened to myself in 1903. I planted fifteen to sixteen cwt. of potatoes. I had not a seed the next year, and we had to apply for relief seed, if you call them relief so long as you have to pay dearly for them. Last year

out of sixteen cwt. of seed in the ground I had not twenty cwt. to take out of it. It was the same case with other farmers in the country I know. What is the use when a poor man's crop fails telling him wait until next year—would he not be dead next year, or have to go to England or Scotland or America.

32127. In answer to Sir John Colomb you said the land would be very much better if tilled more?—I think so.

32128. You cannot till it because labour is scarce?—Yes.

32129. Would it not be better if the labour remained at home and tried to work the land at home?—It would if they could stop, but what would support them at home? When they will till it they have nothing for it when the whole potato crop fails for a year.

32130. Most Rev. Dr. O'Donnell.—Is it your point that the land they do till is not good enough for the purpose?—Some seasons it does very well; but years when the potato crop is a failure what do you want the poor people to do? Surely they cannot sit down in Ireland and die.

32131. Taking years when the potato crop does not fail, would not the extra labour pay them?—It would pay them that year, but they won't have as much as will do them two years, no matter how good it turns out for one year.

32132. Supposing the farmer got an addition of some acres of good land, what would be your answer?—You could scarcely find good land in our locality.

32133. You were telling us of certain grass farms. Would you till those if they were divided up?—I would, but the farms are so small that it is impossible to live on them. How can a man rear a family on five or six or seven acres with a valuation of thirty shillings?

32134. Supposing you gave him an addition of a few acres of good land, could tillage go on profitably?—It could.

32135. Where is the labour to come from?—Let them stop at home and not emigrate.

32136. Mr. Kavanagh.—Tilling the ground on an enlarged holding would pay better than emigration?—Yes, that is so.

Mr. Patrick Rooney examined.

32137. Chairman.—Where do you reside?—At Lecknarainey, Manorhamilton. I am a District Councillor for the electoral congested (scheduled) district of Glenaniff. I am a small farmer under ten pounds valuation. I suggest that suitable grass lands be purchased and divided into holdings to persons migrated from congested districts.

32138. Where do you propose the lands would be?—Wherever arable land would be found.

32139. You do not mind in this county or any other?—In any part of Ireland.

32140. Would they all be prepared to go to any part of Ireland?—I think they would.

32141. The heads of families?—In some cases I believe that it is the young men that are able to work and not the worn-out old men.

32142. Would the heads of families, the men who have holdings now, go?—In most cases they would. There might be solitary cases where old men, like the lark, would like to die where they lived. Owing to the refusal of the landlords to sell at a reasonable price I think compulsory powers should be given to the Estates Commissioners and the Congested Districts Board, so that untenanted land could be obtained for distribution among the tenants. Where suitable untenanted land is not available in a congested electoral division the Estates Commissioners and the Congested Districts Board should have power to compulsorily acquire land in any part of Ireland for that purpose. Farmers' sons under ten pounds valuation, reared at farming should get farms in order to stop emigration and keep them in the country. Each person getting a farm should be at liberty to inspect it, and, if satisfied with the terms of purchase, as these people should be purchasers not tenants, having the same title to these holdings as other purchasing tenants have. In the case of migrated people the term for repayment should be extended in order to lower the half-yearly instalments. What I mean by that is this, where land is purchased and parcelled out to people migrated there, it must necessarily cost a higher price than the ordinary purchasing tenant pays; and I would suggest instead of sixty-eight years it would be extended as far as possible in order to reduce the half-yearly instalment for the person sent in to this place.

32143. But then the land would be better, so that he would be more able to bear the annuity?—So he would, but I would say where a whole family would migrate from a very congested area that if they were at liberty to sell their interest in the little holdings they would be vacating it would leave them means to be able to stock the new holding they would get.

32144. Yes, but then they would get more advantages. You propose that they should sell the holding they vacate, and that they should get another holding for nothing?—But they require some means to be able to stock that holding.

32145. You would not ask, first of all, that a man should derive the advantage of being able to sell his own holding and then get another for nothing?—That is what would suit them best, if it could be done.

32146. Sir John Colomb.—Would you make it compulsory on the tenant migrating to sell the holding to the adjoining tenant?—Oh, I say to any person in the congested district.

32147. Which might not enlarge holdings in the congested district?—Oh, of course to parties remaining it would be more advantageous for them if they got the land vacated for nothing.

32148. Chairman.—Don't you think if a man who had a poor holding of bad land in a congested area were offered a good holding on which he could make a living on good land in some other part of Ireland he would naturally be glad to go?—It would be better to leave the bad thing behind him and get the good thing.

32149. But would he not go?—He would.

32150. And leave the old holding to be divided up?—Yes, but the people would have very little means to start in the new holding, and if they have to borrow all it will be a very heavy sum yearly they will have to pay—perhaps more than they would be able to do.

32151. The migrant would have four or five head of cattle?—In some cases, and in some cases none, or little or no means.

32152. He would have some head of cattle?—Possibly.

32153. Don't you think he would be able to get along for a year or two letting some of his land by taking in some cattle from neighbours, and that sort of thing?—Oh, I believe he would get on.

32154. Most Rev. Dr. O'Donnell.—Would a loan to enable him to add to his stock, on reasonable terms, be an advantage?—It would be an advantage, and a great one.

32155. Chairman.—You can get that now?—Oh, I am aware of that, but there is this in it, that when you borrow a loan you have to repay that back and pay the instalments. I want to see the ground we are standing on.

32156. Still if he did well on the new holding he could repay it. Lots of people have to borrow money to start a bigger business on it?—Yes. Many will succeed and some will fail. If we were able to start on fairly firm ground it would be so much the better.

32157. Don't you think if he felt he had got to repay a loan to the Board of Works it would make him work a little harder than if you gave him the money right out?—We will work well and do our utmost if we get the opportunity.

32158. Would he not perhaps work as hard as he could if he felt that the future of himself and his family depended on it?—Perfectly right.

32159. And if he had that little loan it would make him put his work into the holding?—Oh, certainly.

32160. Most Rev. Dr. O'Donnell.—Would he not feel it easier to repay the loan by which he had certain cattle, which cattle he would not otherwise have? Once he had cattle corresponding with the loan there would be great inducement to make the stock pay it back?—Oh, possibly. They would do so. As congestion is worst in mountainous districts the mountain grazing in all cases should be secured for

Apr. 23, 1907.

Mr. Patrick Rooney.

the tenants at the purchase of their holdings for the purpose of rearing mountain sheep, for clothing their families, and assisting to graze cattle.

32161. CHAIRMAN.—What do you mean, "at the purchase of their holdings"?—That they would be purchasing out the holdings, and that whatever mountain grazing was attached should not be left in the landlord's hands. When a landlord is selling an estate to the tenants the Estates Commissioners should have the estate inspected in order to see if the land is worth the price the tenants are giving.

32162. Sir FRANCIS MOWATT.—That is where the landlord is dealing directly with his tenants and selling to them, the Estates Commissioners should inspect that land and advise the tenants whether they are giving too much in price?—In order to see if the land is worth the price. I will make it clear. It is necessary in many cases to protect the people from themselves, as people in arrears of rent will give too high a price in order to get over the present difficulty. Men with a lot of arrears like a millstone round their necks, sooner than be driven out altogether, are prepared to give the landlord a price the land is not worth, and the chances are they will be unable to pay their instalments. There have been many decrees taken out for instalments where tenants made bad bargains with their landlords.

32163. CHAIRMAN.—For defaulting annuitants?—There were, and there were decrees taken out.

32164. Sir JOHN COLOMB.—It is very rarely the case comes before the court, because the man pays before it comes on—is not that so?—That is when a person is able to pay, but when they are not——

32165. CHAIRMAN.—Have you ever known a case where a man, after he has purchased, has been turned out because he has not paid his annuity?—Well, I don't know many cases of that kind. Why, in fact, it is not very long since the purchase took place in this part of the country, and there is a great deal of defaulters.

32166. Are there any purchasers under the Ashbourne or any of the previous Acts?—Oh, yes, but the prices were reasonable in those days. They are more unreasonable now.

32167. They had to pay 4 per cent.?—Well, the average price was seventeen or eighteen years, and it has exceeded that now. There is no increase in the value of the lands, and the times are not better but worse.

312168. Still, under the Ashbourne Act, or old Acts, you do not know of any case where a man has been turned out of his holding because he has not paid his annuities?—I don't know of any.

32169. Mr. SUTHERLAND.—Do you know of any case of that kind of any person having been turned out for default under the Ashbourne Act?—I don't know of any.

32170. CHAIRMAN.—Your point is that when a man has got a great amount of arrears, and is being pressed, and generally in difficulties, he will agree to purchase his holding in order to get all his arrears wiped out?—I am certain it has been done, although he knows he is giving too much in order to get rid of the arrears.

32171. In every case he gets an immediate reduction of payment?—Of course the purchase will reduce that, but surely it does not follow that a man should give too much, and they have given too much in many cases.

32172. So far as the actual payment go he gets a reduction of five and twenty per cent. off his old rent?—He gets a reduction, but it is not enough. The landlord gets too high a price for his land.

32173. Do you think that the reduction ought to be 50 per cent.?—My point is this, that the Estates Commissioners should send an inspector, and see the value of the land and say, "We will not sanction a sale at a higher price than the actual value of the land." That would be saving the tenants from themselves.

32174. Supposing that they did reduce the years' purchase by two or three years, say three years less than if there was no inspection, the actual reduction of payment would be extremely small, would it not?—My point is, we would expect to be fairly treated. The Estates Commissioners are not expected to be friendly to one class or another, and as outsiders I say I would expect they would fix a fair price, and landlord and tenant should be bound to accept those terms.

32175. The actual reduction in what the man would have to pay would be extremely small. Do you think that is going to make all the difference between success and failure?—I believe the fact of agreeing to pay too much will cause failures in the future.

32176. What I mean is this—supposing that by process of inspection the landlord's price was reduced three or four years' purchase, and supposing that made a difference of only five shillings in the actual yearly payments, whether he paid five shillings more or less, would that make the whole difference between his success and failure?—Oh, five shillings is a great thing to a poor person, and not much to a person with means.

32177. Do you really believe that the whole question of the tenant depends upon whether he pays five shillings per year more?—The whole of it does not depend on that at all.

32178. How would it make a difference if the payment were five shillings less?—It would be so much of benefit to the tenant.

32179. Here is a case, say, where a tenant gives twenty years' purchase of his old rent of three pounds (£3). He pays sixty-five per cent. of his former rent—that is two pounds (£2) instead of three pounds (£3). Then comes an inspection, and it is reduced, say, to seventeen years' purchase instead of twenty. In that case he would pay fifty-five and a quarter per cent. of his old rent, or, in other words, making his yearly payment one pound fourteen shillings (£1 14*s.*). The tenant would pay six shillings less. Do you really think that the difference of six shillings is going to make the difference between success and failure in that position?—I will not say that it might not be the means of ruin to the man, but certainly it would be less out of the landlord's pocket—the rich man—than out of the farmer's.

32180. Have the American supplies failed, or have the friends in America cut their contribution so fine that it is a question of six shillings?—Well, my lord, I would not think it would be fair that the money our poor families and sons and daughters would be sending us over to help to keep us in the country at home and to live should——

32181. I don't say it is right, but still they do it?—They do, for the half of the people would not be able to live in the country were it not for all the money they get from their families in America.

32182. Do you mean that if it is a question of six shillings he would not be able to get that perfectly well from his friends in America?—I am surprised, my lord, at you. My point is, the landlord is a rich man, and cannot he afford better to do without the six shillings than the poor man's friends in America to send it over to the country.

32183. Your point was that inspection, resulting in a reduction of the landlord's price, made the whole difference between success and failure?—I cannot know whether inspection would benefit the tenant altogether or not. We take one view of it. We like to buy cheap, and the landlord likes to sell dear. The Estates Commissioners are a third party, and we expect they would do what would be fair. I have full confidence they would. That is the reason I wish inspection.

32184. Can you not say, from your experience, that as a matter of fact on those very small holdings rent is not the prime factor in success or failure. When the rent is as small as that the price of stock and things of that kind make a much greater difference?—It does.

32185. Than a matter of rent?—It does.

32186. It does not really make much difference to a man who lives on a very poor property whether the rent is five shillings more or less. The price he can sell his calf for, or eggs or milk in the creamery, or the way in which he tills his farm is much more important as regards success or failure than the five shillings?—It is.

32187. Most Rev. Dr. O'DONNELL.—Further on that point. I suppose a man who has three pounds (£3) rental to pay in any case could not live on his holding?—No; he would not be able to maintain himself and his family out of it if he had nothing to pay for it.

32188. He has to find from outside sources something to maintain himself and his family?—Yes.

32189. You agree with Lord Dudley that there are many other elements besides the three pounds (£3) or two pounds fourteen (£2 14*s.*)?—There are.

32190. Then come to the case of a man who has an economic holding of, say, fourteen (£14) valuation, and who is able to live on the holding. Now the

difference in his case between twenty years and twenty-three years' purchase might make his instalment a pound (£1) per year less?—Possibly.

32191. Is not a pound (£) per year something considerable to a man with a holding of twelve or fourteen pounds (£12 or £14) valuation?—Is not that my point all along?

Most Rev. Dr. O'Donnell.—I knew it was. I am taking the point from you and I will leave it to you now.

32193. Sir John Colomb.—Your idea of inspection is to do right between man and man. Supposing a case, say, where a landlady did not know much about the matter and the Inspectors think she is selling too cheap, should they say to the tenants, "You must pay more"?—I would leave it in their hands. There might be a solitary case, but as a general case I think the inspection would be best for the tenants.

32194. Chairman.—All you want is to feel that justice is done, that when you are buying your holdings you are buying at a price which, in the opinion of knowledgeable men, is a fair one?—That is my point.

32195. Mr. Sutherland.—Is there not some other party also interested in your not giving too much for the land, who is the ultimate security?—The rates, sir.

32196. The ratepayers?—And the chances are that the rates will be mulcted later on if they buy at exorbitant prices; if they buy as they have done in the past.

32197. Sir John Colomb.—When you talk about eighteen years' purchase were you talking of purchase of first term rents?—I am talking of purchase under the Ashbourne Acts, and I say eighteen years' purchase was fair, and I think anything more than that is too much.

32198. Have you thought of this, that the Ashbourne Act was previous to the second term rents being fixed?—Yes.

32199. Do you know that something between seventeen and twenty per cent. was the reduction between second and first term rents?—Yes.

32200. Therefore you cannot compare them. Say if it was twenty per cent. On a ten pound (£10) holding in the time of the Ashbourne Act he would pay at eighteen years' purchase one hundred and eighty pounds (£180)?—Yes.

32201. Then say the man has had since that a second term rent fixed with twenty per cent. reduction, so that his rent now is only eight pounds (£8). How can you compare simply years' purchase as a true test when the rent is changed?—I will just meet that. Under the new Act the Government is giving a bonus of three years' purchase, and as well as I understood the Act it was intended that this three years' bonus would reduce the price of land. The landlord gets the whole three years' bonus and the tenant gets no benefit by that. The landlord gets the full price of his land and three years' bonus.

Chairman.—The price might be three years more if there was no bonus.

32203. Sir John Colomb.—Have you thought of this, Mr. Rooney. Supposing the rent is not changed as far as the tenant is concerned and he gave one hundred and eighty (£180) for his holding. His annuity would have been, at four per cent., seven pounds four (£7 4*s.*) per year, and now when he gets money at three and a quarter per cent. it is only six pounds ten (£6 10*s.*)?—Now, sir, that is the act of our Government and they lend us that cheap money in order to assist us, for our benefit, and then they give the landlord three years' bonus, and what right whatever has the landlord to expect that because we get the money something cheaper, he should benefit by that.

32204. I am not disputing that. I am merely asking you, taking the sole basis of calculation as a comparison of years' rent. Have you ever thought of the other side of the question. Checking in that way is scarcely correct?—I am giving you from my point of view as a tenant farmer. The next thing we stand in most need of is employment. Our sons have to emigrate to England, America, Scotland and elsewhere. Our places are wretched and small and are not able to maintain our families. I may tell you the best of our sons have to emigrate. If there is a delicate one in the family, as there will be always a delicate bird in every clutch, he remains at home. I say if we could keep the good, strong, healthy boys at home we would have a better Ireland. And the only way to keep those people at home is to give them the way to live at home. So I would suggest to purchase good grass lands that were fattening the bullocks in the past and support these young men that would be the future men of Ireland. It would be to the interest of the Government to have such people in the country and not enriching other lands. You will have him as a good soldier and sailor as in any other lands if he is contented and gets the opportunity of living in the country. I say for all concerned, it is better if he should get the means to live in the country.

32205. Chairman.—What you would like to do would be to see these grass lands for the sons of tenant farmers?—Yes, those under ten pounds (£10). I would strike a line, economic over ten pounds (£10). There is some difference.

32206. Just think that out. There are a large number of people living in Ireland at present on holdings from which it is absolutely impossible to support them—on very poor small holdings. How are you going to help them if you put the sons of tenant farmers on those grass lands. Ought not these poor people have the first claim?—I say that the people in the congested districts should have the first claim, but if there was more land available——

32207. Then, the first lot of land that you bought you would use to help those poor people who are living in the congested districts?—Yes.

32208. Otherwise, if you put the sons first on that land you would have no means of helping the old people?—Let the old people go along with them. There might be some rare cases where they would say, "We have only a year or two to live, and we won't go."

32209. Supposing there was a strong man, forty years of age, with a family growing up, and that he was living on a very poor holding on a very boggy land in Leitrim or any congested district counties, and if people are to get good grass land, say, in Roscommon, he would have a better claim than the son of any tenant?—Certainly, but I would not remove him except he had consented.

32210. The heads of the families in the congested districts would have the first claim?—Yes.

32211. After you have satisfied them you would begin to think about the sons?—Yes.

32212. Does it not strike you if you did not do that you would leave these people in those congested areas without any means of helping themselves?—If some are obstinate enough not to go and starve at home, let them starve.

32213. Sir Francis Mowatt.—Assuming you gave the head of the family a better holding—six or eight acres—to migrate him too, won't that, by itself, produce employment for his son. A man has got two or three sons, and two will have to go to America to earn their own living. If you gave the head of the family a larger holding won't it provide labour for them?—It will provide for the whole family. With regard to employment, industries suitable to each locality should be established. I would suggest that a woollen factory be established in some suitable place in the congested district of Glenaniff, in Manorhamilton Union, which I have the honour to represent. Of course charity begins at home and I would certainly wish something of the kind there.

32214. Have you thought whether the woollen factory could be made to pay?—It would be most useful.

32215. Could it be made to pay?—There are three large mountain ranges where as much wool could be grown as could be manufactured at the factory. This would give employment to the people, which is badly needed. You would naturally ask me where would the money come from. We have none. Our landlords would be selling out their property. They will have plenty of money on hands. It would be to their advantage to make it useful and benefit themselves. If an enterprising landlord has idle money he will get only a small percentage in the bank, and if he invested it in some useful industry and instead of getting one or two it brought him ten per cent., would not that man be doing much better? Supposing they started a company of this kind I believe the Government would be ready to assist them.

32216. Mr. Sutherland.—When they are earning fifteen per cent.?—There is a possibility of reaching that.

Apr. 23, 1907.

Mr. Patrick Rooney.

32217. CHAIRMAN.—You would like to see an industry, but, of course, you cannot force people to invest their money in anything?—I know that.

32218. The point is you would like to see industries started to give employment to the people?—I would. As the sale of store cattle or calves reared by the people of this country is mostly all the means they have of making money to pay rents or purchase instalments, taxes, etc., if foreign store cattle were imported into England without restriction it would cause such a fall in prices in Ireland as would render the poor, small farmers unable to pay their way and live. It is most necessary that the small Irish farmer should be protected by the Government

32219. Sir FRANCIS MOWATT.—That is to say, foreign cattle should not be allowed to be imported?—There should be some restrictions placed upon them.

32220. Sir JOHN COLOMB.—You do regard it as a great danger to the small holders that there should be any alteration in the importation of cattle?—It would mean ruin.

32221. Am I right in saying that the small holder, who is the breeder of the cattle, cannot afford to keep them till they mature, and if he does not get the price he cannot live?—Yes; he must sell the cattle, he has not the means to hold them over.

32222. The buyers of the cattle——?—They have the whole profit.

32223. At present those who make the market for the young cattle of the small holders are the bigger farmers and the graziers?—They are.

32224. If you extinguish the graziers?—Then ship the young cattle where they are going to. In the end they all go to England. They are bred here and eaten there, where you are all rich.

32225. CHAIRMAN.—You say you think that compulsory powers should be given to the Estates Commissioners and the Congested Districts Board so that untenanted land could be obtained for distribution among the tenants. Supposing that there is not sufficient untenanted land to enable you to make any great improvement would you go beyond that to a man who has a farm and say, "You must give up half your land"?—I would.

32226. Even to tenants?—Well, I believe there is an amount of available land all over the length and breadth of Ireland. I would not be confined to a county or to Connaught.

32227. But if there is not enough untenanted land?—I think there should be a line struck in a farm of fifty pounds (£50), and that should be enough for any man. I would first take the untenanted land, and if that was not sufficient, I would go and take a part from a man who had too much, and would not be able to labour it. I have the honour of representing one of the poorest of the congested districts in North Leitrim, and that is saying much for it. We have, in this division, one hundred and ninety under five pounds (£5) valuation. We have fifty-one over five pounds (£5) and under ten (£10); and twelve over ten pounds (£10). That shows we have twelve persons in the whole electoral division that have as much land as they could be able to live on. It is no wonder I plead here. Of course you are going through a good part of the country, and I heard you make some remarks that this county was not so bad as it was named. Come down and see the wilds of Glenaniff, and through Glenade, and you will hold another opinion. You happen to pass through all the good part of the land in this part of the country.

32228. I just wish to ask you a question which came up yesterday in evidence. Were you here?—I was, the whole day.

32229. Did you hear some talk which went on about sporting rights—game rights and fishing?—Yes.

32230. Well, now, what do you think ought to be done about sporting rights when an estate is sold?—That is a knotty question, my lord.

32231. That is the reason I ask you, you are so intelligent?—Well, this I say, the sporting rights would be of very little value to the tenant, for this reason—the tenant and his sons would be much better employed in working on the lands than knocking about to see to get a shot. Take the other side. If the landlord, when he is selling his property, retains the right to game, if a burning occurs in the dry season, as it will occur from time to time, often accidentally, then there is a claim for malicious damages, and the people are mulcted. I say it is better for the tenant whatever rights the landlord has, to purchase all or none of it.

32232. Would you think on the whole it is much better to preserve the game than to kill it all off?—I would.

32233. Take a river for instance; is it not far better that there should be salmon in it than no salmon?—I will give you my own individual opinion on that point. As I think I would sooner have nothing to do with the salmon. A man would be much better in his bed at night than poaching for salmon.

32234. Is it not quite certain that if a great many people fished the river in a very short time there would be no fish?—I fear that would occur.

32235. If everybody was enabled to fish any way they liked in a short time you would ruin the fishing of that river, and is it not the same thing if over the mountain everybody had a right to graze there would soon be no grass left?—Possibly.

32236. If you believe in keeping game would it not be much better, whoever had the sporting rights, that they should be in the hands either of an individual or a small number of people than in the hands of everybody?—I think in a case where the tenants purchased from the landlord, that they should hold the sporting rights, and that they should appoint a Committee to look after the game; preserve it and sell it. The proceeds to go to pay taxes—that is what I would suggest.

32237. Supposing that the sporting rights of the estate had been sold and were to be handed over to a body like the Parish Committee, and that the Parish Committee were to look after them and to see that the game was preserved, and that they were empowered to let that shooting for the benefit of the district to add to the revenues of the Parish Committee?—I would not agree with that, but add it to the revenue of the tenants. I think it should be the right of the tenants. They bought the landlord's rights. It was theirs when they bought it, and paid for it. There should be protection; let the game be sold and the proceeds go to the benefit of the tenants, either for paying taxes or towards paying instalments.

32238. We are agreed on the principle that the sporting rights should be vested in a small body of people whose object and whose duty it would be to see that the game was preserved and that those shooting rights should be let and the proceeds divided amongst the tenants?—That is my idea.

32239. You would not allow every tenant to shoot at will?—I would not. Suppose there was one hundred tenants there might be two or three fellows would shoot the whole lot and the rest would know nothing about it.

32240. It would also mean, in a very short time, that what is now a valuable asset would disappear?—We would like to get some of you rich Englishmen over, in order to get your money.

32241. You think it would be a good thing to get a certain number of people who have got money to spend to live here?—Yes.

32242. And the prospects of being able to take shooting would be a considerable inducement?—Yes.

Mr. PATRICK REYNOLDS examined.

Mr. Patrick Reynolds

32243. CHAIRMAN.—Where do you reside?—At Carrickfad, Fivemilebourne, County Leitrim.

32244. What are you?—I am Secretary of the Estates Committee on the Whyte estate, and was chosen to give evidence. We formed the Committee to purchase from Mr. White.

32245. Are you a farmer yourself?—Yes; twenty acres valuation—six pounds five (£6 5s.). The land is heathery, a good deal of it.

32246. You were the Secretary of the Committee, and the sale did not go on?—No; there was a difference as to the price. There are two thousand and seventy-two acres of untenanted land on the Whyte estate.

32247. Some of it mountain?—Some of it, and some of it fit only for grazing land.

32248. Most Rev. Dr. O'DONNELL.—You mean rough mountain grazing?—Yes.

32249. Sir JOHN COLOMB.—Not fit for tillage?—No. Of the one hundred and ninety-two tenants seventy-seven are under five pounds (£5) valuation, and seventy-two over five and under ten pounds (£10). The uneconomic holdings of the estate could be improved by adding part of the grass lands to some of them.

32250. Where are you going to get the grass land?—The two thousand acres.

32251. It is not grass land?—Some of it is.

32252. Extremely little of it—I mean it is heather?—No, some of it is good enough for grazing cattle. Others, not easily accessible, could be improved by consolidating two farms into one. This is in the electoral division of Sraghmore. In the townland of Carrickinero Mr. Whyte has 119 acres, 1 rood, 16 perches untenanted, of a valuation of forty-seven pounds (£47) on land and seven pounds ten (£7 10*s.*) on buildings. It is suitable for dividing amongst tenants.

32253. Could anybody live on it?—Yes, if they got a sufficient holding, and got it cheap enough. In Carrickfad Mr. Whyte has 30 acres, 2 roods, 17 perches, and seventy acres.

32254. The seventy acres is the demesne?—We claim it is not the demesne, for he built on seven acres and took the rest within my own memory.

32255. It is called demesne?—Well, it is a very poor demesne. Mr. Whyte calls it demesne, and it is valued at twenty-two pounds (£22) for the mansion house and four pounds five (£4 5*s.*) In Cartron he has 59 acres, 3 roods, 22 perches; 7 acres, 0 roods, 37 perches; and 4 acres, 2 roods, 23 perches, with valuations of £27 15*s*, £3, and £2. In Corray he has 125 acres, 2 roods, 13 perches. It is not fit for tillage. The valuation is £26 5*s*. In Cornalaghta, 3 acres, 0 roods, 7 perches, valuation, ten shillings. In Curraghan, 42 acres, 3 roods, 31 perches, valuation, £3 10*s*. In Doonkelly 54 acres 0 roods, 6 perches, valuation, £7.

32256. Sir FRANCIS MOWATT.—Is this let for grazing to tenants?—No, he takes in grazing cattle. He had sheep on it until November last.

32257. CHAIRMAN.—Cattle from the surrounding people?—Yes. In Doomorgan he has 36 acres, 3 roods, 3 perches, valuation, £12 5*s*. Some of that is fit for tillage, and tenants could be put on it. There are 978 acres in one ranch not fit for tillage with the exception of what would make two new farms. It is known as the Lecaun and Fawnlion sheep walk, and is only fit for grazing land. In addition to the making of two farms the rest would be taken by adjoining tenants, some of whose holdings are very small and miserable, and were made so by the late Colonel Whyte.

32258. Most Rev. Dr. O'DONNELL.—Do you say it was taken from the tenants?—Yes; I remember when it was taken a good deal of it myself.

32259. Sir JOHN COLOMB.—How long ago?—In the early sixties.

32260. Most Rev. Dr. O'DONNELL.—Did the tenants graze cattle and sheep there?—Yes.

32261. Did they pay any fixed sum?—No, it was marked out.

32262. The tenants have no rights of grazing there now?—No. They would take it now if every man got his own. Some of them have wretchedly small holdings.

32263. Sir JOHN COLOMB.—Had the men all gone, or did he take it away?—He evicted very few, but curtailed every man.

32264. Most Rev. Dr. O'DONNELL.—Took away the mountain?—Yes; and in some cases the good land.

32265. Sir JOHN COLOMB.—Did he not give any compensation?—No, none whatever. I will give you instances of a few—Dominick O'Connor lost about twenty-eight Irish acres, and was left only four and a half; Owen Dolan lost thirty acres, and was left only six and a half; Pat Dolan lost thirty-two, and was left only eight; Thomas Murray lost thirty, and was left about eight. The rent was taken down very little for this grass that was taken away, and even he did not take off sufficient rates. Many others were treated similarly. The grass lands of the estate deteriorated very much since it was taken from the tenants by the late Col. Whyte. I know where he took land from six tenants and let it into one ranch. When the tenants had it, it was able to graze about twenty cows. There were only about five on it for the last few years, and they had none too much grass, the land being overgrown with weeds and briars. It might be brought back to its former state by tillage and manure, but would cost much money and labour.

32266. Most Rev. Dr. O'DONNELL.—Do you say he takes in grazing cattle on it?—Yes. Where I once saw over twenty there was only five for the last few years. No man would like to send grazing cattle where the grass is so poor.

32267. Sir JOHN COLOMB.—Any sheep on it?—No, only rabbits; they eat the roots of the grass away and turn it into moss.

32268. Most Rev. Dr. O'DONNELL.—If the occupiers had that grazing land, they would see that the rabbits were trapped and reduced in numbers?—They would. It would want to be cropped and broken up again. There could be tenants put on that back again if it was cropped.

32269. The CHAIRMAN.—Why does not the landlord crop it himself?—It would not pay him, I suppose. Colonel Whyte was cropping it, but he found it did not pay him—he had to pay everything.

32270. Why did it not pay him, and how would it pay you?—Because we would give our own labour to it for nothing. If I want to live off my farm and pay all I did myself, it would not pay me.

32271. Most Rev. Dr. O'DONNELL.—How do you give your labour for nothing?—Because I get nothing for my labour but my bare support just, after a great struggle. I would not take five pounds (£5) valuation as a basis for uneconomic holdings. I know holdings valued at over ten pounds (£10) which are uneconomic holdings, for the simple reason that they have not enough arable land on them for a sufficient rotation of crops. Therefore, the occupier has to till the same land too often, and, as a consequence, have bad crops. If we had more land, we would not crop the same land too often, and would have better crops. We have to crop it at a certain time. When I find my land failing for grass, I crop it and have a good crop.

32272. Sir JOHN COLOMB.—How many acres do you farm?—About twenty acres.

32273. How much do you consider arable?—About six or seven.

32274. How much of that do you till?—The whole of it in rotation.

32275. Of the six or seven acres that are arable, how much do you till?—About one and a half acres.

32276. Do you grow anything besides potatoes?—Turnips and a piece of cabbage. I could not find manure for more. I have to buy manure. I buy a lot of hay every year.

32277. What stock do you keep?—I manage to keep five cows, but I get a lot of hay.

32278. The CHAIRMAN.—I suppose that as a general thing tillage is limited by the amount of manure?—Yes.

32279. Sir FRANCIS MOWATT.—And how much do you spend on manure?—About two pounds (£2).

32280. Sir JOHN COLOMB.—Do you keep other stock besides the five cows?—Not on the farm. They only have grazing during the summer. I take conacre. The last harvest my conacre was about five pounds (£5).

32281. Will the manure of five cows only do about one acre?—About that. I often have ten head—five cows and five calves.

32282. Are the Commission to take it from you that a man with five cows can only be expected to find manure for one acre of tillage?—Yes, on our bad land.

32283. The CHAIRMAN.—Do you ever give your cattle cake?—No—turnips or potatoes, and cabbages when I can spare them. I take con-acre hay and save it four miles away.

32284. Sir JOHN COLOMB.—That is all consumed on your farm?—Yes.

32285. And yet the manure is only enough for one acre?—Yes.

32286. Most Rev. Dr. O'DONNELL.—Some of your stock lie out during the summer?—Yes; but not in winter.

32287. CHAIRMAN.—What do you do with them in winter?—House them.

32288. Sir JOHN COLOMB.—Do you keep a horse?—No; I keep pigs.

32289. CHAIRMAN.—Poultry?—Yes; and I think more is made of the fowl than of the butter. I do not look after the prices my wife gets for the eggs.

Apr. 23, 1907.

Mr. Patrick Reynolds.

She sells the eggs in Sligo, and a lot of people in the neighbourhood do that.

32290. Sir JOHN COLOMB.—Have the Congested Districts Board given any assistance?—Yes; we got some of the eggs from the poultry stations.

32291. You found the benefit of them?—Yes, very much. There were negotiations going on for a sale under the Wyndham Act. The landlord asked twenty-six years', but came down to twenty-four years' purchase. We bid him eighteen, but through the clamouring of tenants that were hopelessly in arrears, we were induced to bid him twenty-one years'. The majority of the tenants were displeased, and soon after held a meeting, and asked me, as secretary, to write withdrawing that bid. All the tenants are anxious to buy through the Estates Commissioners at what they consider its value when they inspect it. There are about twenty-five young men, tenants' sons, who are anxious to get new farms. If they do not get those farms, nothing is open to them but emigration.

32292. CHAIRMAN.—Did you withdraw that bid of twenty-one years?—Yes, I did. The majority of the tenants would not stand to it.

32293. Would the landlord have accepted that?—No, he would not.

32294. So it did not make much difference whether you withdrew or not?—No.

32295. Sir JOHN COLOMB.—Was there any condition at all about selling this vacant land to you?—He offered to give the bad part of it to us, and keep the good part himself.

32296. Was it purely a question of the number of years' purchase, or was there any other condition with regard to the tenants wanting an assurance in the selling of untenanted land?—There was.

32297. Therefore it was not purely a question of years' purchase alone?—He would give us the bad class of land—the sheep walk. It was no use to him. It was not good enough for him. He wanted to keep the good part himself.

32298. Meaning he wanted to give up the ground he could not make a profit on by tilling?—Yes.

32299. I understood you said that the tenants could till it?—They could till part of it. They could not till what he offered. If they got the good part they could till it. There is another estate of which Mr. Whyte is the head landlord, the estate of John Dolan, of Moragh. There are fourteen tenants on the Dolan property, and of these seven are under four pounds (£4) in valuation; five are under seven pounds (£7) and three from ten pounds (£10) to twelve pounds ten (£12 10s.). The landlord holds one hundred and fourteen acres of untenanted land, and eighteen of those belong to an evicted tenant. The small farms of this estate could be improved by the addition of some of the grass lands in the landlord's hands, all of which are easily accessible to the tenants. On the estate of Colonel Roger Parks in our neighbourhood, and of which Mr. Whyte is the head landlord, there are only two tenants, the landlord holding one hundred and ten acres, all arable land, which he has let on the eleven months' system. Some of this could go to improve holdings on the Whyte estate and others adjoining it, five of which are very barren and barely fit for cultivation. The remainder could go to make three or four new farms.

32300. CHAIRMAN.—Do you think the heads of families would go to another part of Ireland if they got a better holding?—Some of them would. You would want to give them some compensation to help to assist them in the new holding.

32301. Would it not be sufficient to get a better holding?—Myself and my father expended a lot of labour on my holding. Of course if I got a better farm I would have to leave all my labour there to another man. I would think it very hard.

32302. You call it very hard if you get a better holding?—I would not like to leave my neighbour to enter without they assisted to pay my annuities.

32303. And you prefer to go on living on a bad holding rather than go and occupy a better one?—If I could get a good holding on good land and the Government will lend me money to build a house.

32304 No; they will give you the house?—If they would, of course——

32305. Sir JOHN COLOMB.—What would you expect to get for your tenant right?—It would go near two hundred pounds (£200) as land is going. If I went to sell it by auction with the land greed as it is at present I might get more.

32306. The reason you would not be inclined to go is you would not like to leave the holding to another man?—I would not think that would relieve congestion.

32307. Your feeling is this, that you don't think even if you got the two hundred pounds (£200) you would be inclined to go?—I would if I got a better holding from the Government. I would not think that fair.

32308. If you got the two hundred pounds (£200) you would expect a house and fences ready for you in addition?—I might, but that would not be fair.

32309. CHAIRMAN.—That would not relieve congestion?—It would not relieve congestion.

32310. Sir JOHN COLOMB.—You would not think it fair to the State?—If I remove to a better holding I should give up my holding to relieve congestion where I live. If I get leave to sell some man may come and buy that. Some neighbours could not afford to buy it and the congestion would not be any better.

32311. So that you recognise it is essential you should give up your own holding?—Yes.

32312. CHAIRMAN.—If you got a better one with better land would you go?—I would be leaving all my improvements to my neighbours.

32313. Would it not depend on how much better the holding was?—It would come to a comparing match. Take three holdings—one of them should leave. It will come to a comparing match as to which shall go and leave all our improvements to the other two, and finally none of us would leave.

32314. Most Rev. Dr. O'DONNELL.—You think you would get less advantage than your neighbours. That might not be so. You would get more advantage than the two men who would be benefited by your going. They would not receive presents of parts of your holding without paying to some extent for the value they received. They might not be asked to pay in cash, but something would be put on their annuities corresponding with the tenant right. One like you who would go to a distance would be offered a bigger advantage than the man who would benefit by your going away. Under those circumstances would you be willing to migrate?—Yes.

32315. You would get a better holding and house?—Yes.

32316. Sir FRANCIS MOWATT.—The value of the holding you are in now, two hundred pounds (£200), is the result of your labour. If you move to a new holding worth two hundred pounds (£200) more than your present holding you would go?—Yes.

32317. Sir JOHN COLOMB.—You value your holding at two hundred pounds (£200). Do you think you would get two hundred pounds for it?—I might not, it is only a supposition. There were farms sold about the country went to two hundred pounds (£200), and I would as soon have my own.

32318. Most Rev. Dr. O'DONNELL.—You have put a great deal of labour into it?—Yes; on reclamation and labour on tillage, which may be left no permanent advantage, and on drains and fence. The tillage improved the land too.

32319. Mr. KAVANAGH.—You would not be afraid you would not be able to work the new holding, say, a holding in Roscommon, to the fullest extent?—If it was large enough to enable me to keep a horse I would.

32320. You do not think a change in the nature of the ground and soil would prevent you making a living?—No.

32321. You would not have any fears?—Not one bit.

32322. You think your neighbours are of the same opinion?—I think so.

32323 Mr. SUTHERLAND.—You heard the evidence Mr. Hewson gave about that—do you agree with it?—No; not at all.

32324. You would be the man called upon to go, not Mr. Hewson?—I heard Mr. Hewson giving his evidence. I do not agree with it. I am sure I would sooner migrate up to Roscommon than go out to Canada.

32325. CHAIRMAN.—You would rather go to a better holding in Ireland than in Canada?—Yes; I would rather have twenty acres in Roscommon than two hundred in Canada.

32326. Sir JOHN COLOMB.—You think plenty of farmers as well as yourself would be willing to migrate if they got better farms?—Yes. I would like to mention some reductions of rent in the Land Courts and annuities.

32327. CHAIRMAN.—Mention one or two?—There was the case of Michael Dolan, whose old rent was fifteen pounds (£15) and was reduced to seven pounds ten shillings (£7 10*s.*). His annuity now is five pounds two shillings and four pence (£5 2*s.* 4*d.*). That man improved his land very much since he purchased it.

Mr. PATRICK MITCHELL examined.

32328. CHAIRMAN.—Are you a farmer?—Yes; with about eighteen statute acres and valuation of about nine pounds (£9). I live at Cartrontemple, Manorhamilton.

32329. Is any of it mountain land?—It is not mountain land, but what is called one-pointed grass. Some of it is middling fair land and some moss land or boggy land. I consider the worst thing the people are in need of at the present time is some employment, something to keep the people at home and give them a way of living. I consider that some parts of the division are badly in need of scheduling and that the area of congestion should be extended to give the people the means to improve their farms and their houses.

32330. So as to bring them under the Parish Committee's scheme?—Yes. I think that around Manorhamilton would be a very suitable place for some industries. It is nearly central in North Leitrim. I would suggest that a portion of a road that was made in 1846, that is sixty years ago, by the Government, as you go from Manorhamilton to Garrison on to Kilroot, should be opened up. There is a portion of the country there that is badly in need of it. It is also started in the townland of Mullinaduff, which is on the road from here to Garrison and in Manorhamilton Electoral Division. I would suggest that the waste lands in and around Manorhamilton should be parcelled out and distributed amongst the small farmers, the labourers, and artisans, and there are a great many of these people living in Manorhamilton and around it.

Mr. JOHN GILMARTIN examined.

32331. CHAIRMAN.—Where do you reside?—At Rossinver, Ardagh, County Leitrim.

32332. What is your occupation?—I am a small farmer and Supervisor of the Parish Committee works. I reside in Rossinver, on eighteen acres of land, of which five or six are arable. It is situated on the mountain slope. I am also Secretary of the Rossinver Credit Society or Agricultural Bank. I am familiar with the mode of living of the people of Rossinver and Johnston estate. The land is of bad quality and is not able to maintain any beasts of good quality. There is disease called cruppen which stiffens their bones and they die. All the labour is done with the spade.

32333. Do you till much yourself?—It is not possible to till much. The manure has to be taken up the side of a hill, in donkey loads, and in a wet season it cannot be brought out. There are about one hundred uneconomic holdings in Rossinver, and none large enough except a few where the tenants left in 1846 or 1847. There is no farm in the district where horses can possibly be kept except one. Migration is the only means of relieving congestion in this district. There was a creamery, a Lonsdale or private creamery, but it is closed up. Now, at present, if the Congested Districts Board put up a creamery it would help the people to get better prices for their milk.

32334. There is no creamery near?—No; not in Ballaghameehan Parish. There was an effort made to have one, but through the poverty of the people it fell through.

32335. Have you ever asked the Agricultural Organisation Society to help you in the erection of a creamery?—Yes, and an organiser was down there, and there was a certain number of shares, but the people are so poor that it fell through. About four is the average number of cows a farmer can keep. Some of them can keep only one or two. The average price for the calves reared is two to three pounds (£2 to £3) in this district.

32336. Sir JOHN COLOMB.—You mean yearlings?—Yes. I do not know of any person living in the district that is not depending on the earnings of families or friends in some foreign country for support, or else have some other industry going on. The holdings are altogether too small, and some of them very inconveniently situated. I can just show you a map produced before the Land Sub-Commission that will speak for itself (*map produced*). It will bear out my statement that they are pretty long and inconvenient.

CHAIRMAN.—There is the most peculiar shape of holding I ever saw—about a mile long.

32338. Most Rev. Dr. O'DONNELL.—Have they to turn the house on it?—The house takes nearly the whole breadth of the land. The people have to go up in the morning with the cattle and in the evening to bring them back. The Parish Committee is doing very good work although the funds are so limited they cannot nearly meet the demands for them. Last year the amount of money placed at the disposal of the Committee was fifty pounds (£50), and I would say, as Supervisor of Works, there could have been one hundred and fifty pounds (£150) expended easily. A number of the people who apply can get no assistance. The works are very satisfactorily carried out.

32339. CHAIRMAN.—Do you get a salary?—Yes; ten per cent. of the grant—five pounds (£5).

32340. Do you get a bicycle allowance?—No allowance.

32341. Is that all you get?—That is all, and very small indeed.

32342. Most Rev. Dr. O'DONNELL.—What works are usually carried out?—Generally speaking, house repairs or out-house repairs. They consider the amount can be best used by making the people and cattle as comfortable as possible.

32343. There is not enough of money to go into drainage or reclamation. If you had a larger amount it could be usefully employed on those purposes?—Yes; very usefully.

32344. CHAIRMAN.—Have you ever seen people in Leitrim or anywhere who had cattle in their houses?—None in our part. In some cases young stock, but that is done away with.

32345. It has never been part of the work to remove the cattle out of the houses?—Certainly, but we have not to do it. I found young calves in one and found fowl in another and made them provide outhouse accommodation; and if I found any manure it had to be removed. I would say people between seven and ten pounds (£10) valuation stand as much in need of a grant as many under. I would suggest that the standard of valuation should be raised to ten pounds (£10) in this parish. The scheme has been working only for three years in the parish.

32346. Mr. KAVANAGH.—Is yours the prize system or grant-in-aid?—Grant-in-aid.

32347. Which do you think the best?—I do not think the prize system would have much effect in our parish.

32348. They are too poor?—Yes; they are too poor.

32349. Who values the work?—I make the estimate of the cost of the work.

32350. And then according to the estimate a certain amount of money is given?—Yes.

32351. Is there any fixed proportion?—From a third to a sixth.

32352. What determines whether it should be a third or sixth?—Generally for house repair, or if the parties are very poor a third is given, and making of accommodation roads, reclamation, drainage, etc., a fifth is given. It is subject to the sanction of the Congested Districts Board.

32353. Most Rev. Dr. O'DONNELL.—Is your work supervised by an inspector?—Yes.

32354. Does he go around to see the works?—Yes.

Apr. 23, 1907.

Mr. John Gilmartin.

32355. The works in the parish are inspected annually by an inspector from the Congested Districts Board?—Yes, my lord.

32356. Sir FRANCIS MOWATT.—Does he come down?—Yes, and the papers are forwarded to the Congested Districts Board.

32357. CHAIRMAN.—Is the estimate which the supervisor makes checked before the work is carried out?—Yes.

32358. Not overhauled afterwards?—It is.

32359. Most Rev. Dr. O'DONNELL.—When the works are completed are they inspected by the inspector?—Yes, but the payments may be made before they are inspected. I have authority to inspect, and I can give a certificate for payment when the works are satisfactorily completed.

32360. And you are liable to an inspection of the works at any time?—Yes.

32361. Is it the same inspector for Leitrim and Donegal?—Yes, Mr. Fallon.

32362. Sir JOHN COLOMB.—Do they ever alter your estimate?—They never altered my estimate.

32363. Most Rev. Dr. O'DONNELL.—There is a complete report sent in about the actual grants to be made to the particular persons?—Yes.

32364. That goes through the hands of the inspector?—Yes.

32365. CHAIRMAN.—Can you tell us anything else they give grants for in addition to those for houses, out-buildings, roads, and drains?—Reclamation.

32366. Anything else?—Fences. We sent on no application for sod fences, but they sent on specifications, and I believe they would give a grant for them.

32367. In the case of drains, which a small tenant makes, do they cost him anything out of pocket, or are they only a question of labour without any expenditure of capital?—Yes, the applicant who puts in an application for draining a field will get only about a fifth of the actual cost of doing the work.

32368. Is the cost measured by taking into consideration the value of his labour or the actual amount of money he has to spend?—The cost of the labour.

32369. The labour is valued at so much per day, and that is put down as the cost?—The actual cost that is furnished.

32370. He does not actually have to produce money out of his pocket?—If he has drains they are done with his own voluntary labour, but if he goes in for house repairs he will be money out of pocket.

32371. If a tenant wants to drain a small field, so long as he is willing to do the work himself it does not necessarily cost him any money out of his pocket?—No; it is voluntary labour.

32372. CHAIRMAN.—So that when you are estimating that you are estimating the value of the labour as the cost of it?—Yes.

32373. Sir JOHN COLOMB.—Are there so many stones on the spot that he can get enough for draining?—Sometimes he may have to draw them from a distance.

32374. That would be out of pocket?—He may do it by his own labour.

32375. Most Rev. Dr. O'DONNELL.—That is, in a horse and cart?—He may take them on a donkey and paniers or in some cases carry them on his back.

32376. Mr. KAVANAGH.—Is not the drainage calculated at so much a perch?—Yes.

32377. CHAIRMAN.—Road-making comes under that category too?—Yes. Perhaps he would have to go in for getting the material quarried. There are two electoral divisions in this division scheduled as congested. There is one that is not, and in it there are some of the people's holdings and their houses as badly off as they are in the congested (scheduled) districts. The non-scheduled district is Ballaghameehan. I would suggest that it should be scheduled also. The work done would be about five times the amount of the grant they receive. The Agricultural Bank is working for almost two years now. It is doing very good work. A good deal of the loans is for the purchase of stock and the saving of stock. The borrowing powers were two hundred and fifty pounds (£250), and need to be raised to four hundred pounds (£400). I believe only for the Agricultural Bank is in the district a third of the stock would not be in it. The people are industrious and honest. I know a case of one man who received a loan from the Bank. It was to pay rent, and to save some poor beast. He had to go to Scotland, and he sent the instalments back again to the Bank Committee. Another matter of very great importance is the drainage of Lough Melvin. We appealed to the Congested Districts Board for a grant to get it lowered, and the reply we got was that if a Drainage Board was formed the Congested Districts Board would be prepared to consider what amount they could give towards the work. We took the Kilcoo River, Lough Melvin and Bundromer River into one scheme which would be from twenty to twenty-five miles of work. With regard to Lough Melvin, the obstruction is a rock which is in the River Bundromer. It dams up the lake and damages the only portion of Leitrim land that surrounds it, when the lake is at high water. There are two rivers emptying into it. There is no outlet for the water when the lake is at high water in time of floods, and it flows into the people's dwelling-houses. On the 3rd August last their whole crops were destroyed by it. On 16th March last it tore up the roads and went into the houses. Some of the people had to take in calves and prop them up to prevent them being drowned.

32378. Most Rev. Dr. O'DONNELL.—The bed of the river is as high almost as the surrounding land?—No. If there was a grant given to sink this river, it would be a great benefit to these people. One of the farmers, into whose house the flood broke, is present, and will be able to give you more information on the subject than I can.

32379. CHAIRMAN.—Do they spray their potatoes about here?—Yes.

32380. Regularly?—Once generally.

32381. Have you found that in recent years they have been pretty energetic in spraying the potatoes?—Yes. They sprayed them once. The land is of very stubborn clay, and in a wet season the potatoes are not worth turning out of the land.

32382. Even with spraying?—Yes.

32383. In your opinion spraying is of no good?—It is a benefit, but will not ensure a potato crop.

32384. Did you hear any complaint about the difficulty of getting spraying machines?—Yes.

32385. Or mixture to spray them?—It could be found in the neighbouring markets. The difficulty of getting spraying machines is complained of.

32386. Have you ever thought of any method by which they might more easily get spraying machines?—As Secretary of the Parish Committee I was asked to write about a scheme for spraying machines to the Congested Districts Board. They told me they had given up that branch and given it over to the Department of Agriculture.

32387. Do you think it would be of any use to the Parish Committee to have spraying machines to let out?—I am sure it would be of service.

32388. It would be a more practical means of getting spraying machines than any steps the Department have taken?—Yes.

32389. And a good mixture, which they could guarantee?—Yes; I believe that would be very useful.

32390. Mr. KAVANAGH.—Would not a change of seed be very necessary?—We applied this year for a change of seed and we got them.

32391. CHAIRMAN.—Have the people confidence in the Parish Committees?—Yes.

32392. They would be very likely to take the advice of the Parish Committees as to the best means of carrying on the holdings?—Yes.

32393. Is there any other body of people in the district who might, you think, have more influence than the Parish Committee?—I do not think so. Of course the Parish Committee is a publicly elected body of representatives of the people.

32394. All local?—Yes.

32395. The people know all the members of it?—Yes.

32396. Mr. KAVANAGH.—Have you ever been instructed that three sprayings are necessary and that one is no use at all?—Yes. I understand that.

32397. Has it ever been tried in this country?—Never.

32398. Why do they spray once if they know it is of no use?—Undoubtedly it is of use. I think twice would be better.

32399. Do you think once is of any use?—Yes, from experience I say it is.

32400. Have you an Agricultural Instructor in this country?—Yes, but unfortunately he is not much use to us.

32401. CHAIRMAN.—Does he live here or appear occasionally on a bicycle?—He comes to give lectures, but he never puts his lectures into practice.

32402. And nobody ever derived any benefit from his lectures?—No.

32403. Sir JOHN COLOMB.—All this work is done through the County Committee?—Yes.

32404. Do the County Council express any dissatisfaction or a wish that the proceedings should be better arranged?—I could not say, but I believe from my own experience agricultural instruction in this form of giving lectures on what is to be done without giving experiments is a waste of money.

32405. CHAIRMAN.—You have got a representative on the County Committee?—Our parish is not represented.

CHAIRMAN.—Your district is.

32407. Most Rev. Dr. O'DONNELL.—You are a good distance away from the place of meeting?—Yes.

32408. In answer to Mr. Kavanagh you said spraying twice would be better?—Yes.

32409. And last year was so wet in the county through the spraying season it was difficult to find suitable days for spraying three times?—I could almost say impossible to find suitable days.

32410. It was exceptionally bad last year?—Yes. I would say no direct sales should take place between landlord and tenant and that the Congested Districts Board should see what could be done. If the people could be migrated it would be a great benefit. The drainage of rivers and lakes and other things would be a great means of relieving congestion, but if the direct sales continue congestion will still remain. If the people had their farms free they could not live on them as they are so small and inconvenient.

Mr. MICHAEL CONNOLLY examined.

Mr. Michael Connolly.

32411. CHAIRMAN.—Where do you reside?—At Uragh, Tullaghan, County Leitrim.

32412. You are Secretary of the Tullaghan Branch of the United Irish League?—Kinlough is the name of the Branch.

32413. Are you a farmer yourself?—Yes. I have about thirty-three statute acres. It is all very rough. The valuation is only fifty shillings (£2 10*s.*). This accounts for the value of the holding. There is ten shillings on buildings. The only benefit derived from the Congested Districts Board in this locality is the Parish Committee works, which is a very slight help, as a grant of seventy pounds (£70) per year is simply nothing when extended over an area of twelve miles. It covers two electoral divisions, Tullaghan and Gubacreeny. They do not carry the full breadth of twelve miles. The Parish Committee grant of seventy pounds (£70) cannot be regarded as very much to help them. I would suggest that it be greatly enlarged for the benefit of the people. The number on the registered list of voters in the Tullaghan division at the last returns was upwards of four hundred. This accounts for the number of holdings there are in Gubacreeny; three hundred and fifty; and I expect there was a few not on the list in each division, so that the population is very large. The greater number of the holdings in each of those two divisions are exceptionally small. Later on I will refer to the valuation and area of certain holdings in the Tullaghan division. In the Gubacreeny division there are six miles, I can safely say, without a single well of pure water, and a grant for the erection of a pump or provision for supplying them with pure water is a great necessity. The Kinlough electoral division is adjoining these two divisions. It would require very much to be scheduled as congested. Grazing lands are available which might be used for the relief of congestion. Augherdonvane ranch—I will give you the area and the valuation of it, and a few other holdings which in my opinion, if compulsory powers were given to the Estates Commissioners and the Congested Districts Board for the purchase of these holdings, might be used for the relief of congestion; in Kinlough electoral division St. George R. Johnston is the owner of a ranch. It has an area of 414 acres 2 roods 32 perches, valuation on land one hundred and eighty pounds (£180), on buildings three pounds (£3), gross total one hundred and eighty-three pounds (£183). There is another holding in the same electoral division of 62 acres 2 roods 24 perches, valuation forty-five pounds fifteen shillings (£45 15*s.*). There is no valuation on houses or buildings on the lands. This shows distinctly that those are unoccupied holdings, which, I believe, should be used for the relief of congestion. In the Dickson Estate, Tawley, there are about sixty small holdings, and I find since I made out this return I was rather under the number. The average valuation on this estate is about two pounds five shillings (£2 5*s.*). There is a grazing ranch of two hundred and sixty acres situated close to these holdings and used by the tenants referred to for grazing and conacre for upwards of forty years. I am of opinion that the River Duff should be drained and the bogs, which lie waste, divided, and a road made through the bog. This would be a source of industry, a turf market being available. What I mean is there is a necessity for getting turf, and, of course, there would be so much money saved in the year from going elsewhere. There is a Co-operative Dairy Society worked by an engine, and the engine is fed by turf. Of course, the turf is plentiful in the plot I refer to. In other parts it is very scarce. In this division there are four hundred acres without a way into it. Some of it is on the Dickson estate and some on the Ffolliott estate. The drainage of the River Duff and the making of a road would open up this bog. Under threat of recovering arrears by proceedings on the Dickson estate improvident bargains were made by the tenants. Particulars of the sale to James Murray and others will prove instances of bad sales. James Murray's first term rent was two pounds ten shillings (£2 10*s.*). He was promised eight shillings in the pound by consent to purchase. The first demand he got in lieu of rent was for two pounds five shillings and sixpence, only allowing four shillings and sixpence, after a promise of eight shillings.

32414. Sir JOHN COLOMB.—Was there an agreement signed before the Estates Commissioners, when you talked about terms between landlord and tenant?—The Estates Commissioners took no action whatever in this matter. The estate I refer to was, I understand, in the Land Judge's Court. In Dublin it was sold upwards of a year ago.

32415. Who promised the eight shillings?—The Receiver on the estate was the man conducting the sale, and it was through him the promise came. The Land Court refused to accept the offer of the tenants. They had not their offer properly made. They expected to get the Congested Districts Board to work on their behalf and make an offer. The Congested Districts Board did not turn up in good time. I think it was owing to the failure to supply a valuation sheet of the estate, and they could not move without it. The judge refused to abide by the bargain, and it seems the tenants could not be forced even on those terms because some of the tenants entered the Land Courts to have fair rents fixed. I will give you an instance, Winifred M'Gowan paid a rent of three pounds (£3) first term. The purchase agreement was for 8*s.* reduction per £; interest demanded in lieu of rent was two pounds seven shillings (£2 7*s.*) in this case. There was an application in the County Court and at a special sitting the rent was reduced to one pound fifteen shillings (£1 15*s.*).

32416. CHAIRMAN.—I do not understand. How was the rent fixed if he became a purchaser?—There was a clause in the signature which enabled him to break out of it. The solicitor advised him.

32417. Sir JOHN COLOMB.—There was a preliminary agreement signed, I suppose, but they did not sign the purchase agreement?—Yes. Without inspection or something to safeguard the interests of the tenants for the future, bad and improvident bargains will be made, until they are taught a lesson.

32418. Most Rev. Dr. O'DONNELL.—In the case you mentioned the annuity instalment would be more than the second term rent?—Yes. In any case I want simply to show how largely congestion exists about here, and grazing ranches in it which cannot be got for the relief of congestion. Extent of holding and particulars of the position of Ml. M'Gowan, Tawley, are as

Apr. 23, 1907.

Mr. Michael Connolly.

follows:—Valuation of holding—on land, twelve shillings; on buildings, five shillings; total value seventeen shillings; rent, two pounds three shillings (£2 3s.). American resources only enable him to live. Others are similarly situated.

Sir JOHN COLOMB.—What is the acreage of the farm?

32420. Most Rev. Dr. O'DONNELL.—The acreage would depend on the valuation or the quality of the land?—I expect about five acres would be about the total of inferior soil.

32421. Sir FRANCIS MOWATT.—The valuation is seventeen shillings?—And the rent two pounds three shillings (£2 3s.).

32422. Sir JOHN COLOMB.—Is that the rent fixed in Court?—I could not say.

32423. Was it in court or by judicial agreement?—It is a first term judicially-fixed rent. Whether it would be an agreement with the agent or receiver on the estate, or whether it would be fixed before the County Court Judge I am not in a position to say exactly.

32424. Most Rev. Dr. O'DONNELL.—Do you think rent was laid on the improvements?—I expect it must have been. Maps and valuations of holdings in support of this evidence can be produced. The Leitrim coast is without a pier or boat slip for the accommodation of fishermen and such is very necessary. There are a number of people living there, and their holdings are so miserable and small they want some labour to help them to exist. Of course if there was a boat slip for the fishing industry erected in or around Tullaghan it would help that industry, and give some employment there, and other industries might follow suit.

32425. You have an idea where the pier should be?—I would prefer a sheltered spot. The enlargement of the Parish Committee grants would also be beneficial. The grant at present is miserably small for the area.

Mr. HUGH GALLAGHER examined.

Mr. Hugh Gallagher.

32426. CHAIRMAN.—Where do you reside?—At Kiltyclogher, in the north part of the county.

32427. Are you a farmer?—I am a farmer's son. My father's holding is twenty-three acres. The land is, I believe, the worst in the County Leitrim. The valuation is £6 5s. I may say that the great majority of the land in the district is heather. It is a hilly country, and the land, which is heathery, is incapable of producing any kind of crop. The farms are in fact all spade labour farms. There is not a single plough or mowing machine, and it is the poorest district I know of in any part of the country. It comprises two estates. It is scheduled, and there is one large estate and one small. The large one is the Tottenham Estate, famous for the number of evictions during the land war. In fact there were evictions year after year. The people are so poor they are not able to pay any rent. The holdings are bad and uneconomic. The people—the men—have to go to England and Scotland during the summer months to earn the rent and means of supporting their families. I believe if there was a system of migration introduced—there are some grazing lands in the neighbourhood—the farmers are quite willing to go if they get better holdings.

32428. Sir JOHN COLOMB.—Your father and mother are willing to go?—Certainly.

32429. To give up their present holding?—Yes; the idea of any man of any knowledge is to improve his position if he can do so. If there was a system of migration introduced, and existing holdings enlarged, it would be very beneficial. There is good reason for believing that the country here is rich in minerals. If the Congested Districts Board sent down a mining inspector the people would be thankful, to see if there could be industries extended. There are iron mines at Kiltyclogher, which have been pronounced to be the best to be found in the United Kingdom. The transit facilities are very poor and the nearest railway station is five miles distant. Of course it would be inconvenient for transit purposes. The roads would want to be improved and some better roads made. If there was a railway line to open up the country it would be very beneficial.

32430. Sir FRANCIS MOWATT.—Has the iron ever been worked?—Not for a long time. There is a tradition in the country. It is a historical fact that there were iron works at Garrison, Fermanagh, about ten miles from that place, and iron was conveyed down from the mines at Kiltyclogher on the backs of animals at the time of the Irish wars some centuries ago.

32431. The conditions are not quite the same?—The conditions are improved, and if they were applied to this mine, I think it would be found——

32432. CHAIRMAN.—At any rate you would like to have it inspected?—Yes, that is my idea, that the Board would send experts to examine it. There is also delph clay, and there is water power available.

32433. Most Rev. Dr. O'DONNELL.—Is it from that district some of the clay used to be taken to Belleek?—No.

32434. I understood it was from the Leitrim mountains?—It used some time ago. If there was a factory for making delph there it would be a great benefit.

32435. Is there anything in the way of cottage industries?—There are none.

32436. No lacemaking?—There was a lace class, but it is not in existence at the present time.

32437. CHAIRMAN.—Did the girls not take to it?—When they got to a certain age the great majority of them emigrated. The ones that are at home have sufficient work to do to attend to the household duties, and they cannot find time. It is not every girl that can be an expert lacemaker. Fifty might attend and not more than twenty would be able to turn out lace that would sell in the market. Even that might fail. It is a good idea, but it is only a drop in the ocean. There would want to be something done in that part of the county, something to improve the economic condition of the people.

32438. Sir JOHN COLOMB.—On this farm of your father's how many are in the family?—Six; I am the eldest.

32439. Have you got any brothers and sisters in America?—No.

32440. Has the whole family been brought up on that farm?—No. We have another farm.

32441. Is the other farm in the same district?—No. It is in County Fermanagh.

32442. Therefore, you have had experience outside this district altogether. Have you been in England or America?—No, I have not been out of Ireland.

32443. You have the other farm?—Yes, a tillage farm.

32444. Who lives upon that?—I live in Fermanagh, on the borders of Leitrim. The two farms almost join.

32445. How far is one from the other?—Not more than three hundred yards.

32446. You live on one and your father on the other?—We farm the two as one. That is not a general case. People do not hold two farms.

32447. Do I understand you to say you would migrate?—Certainly, if we got a better place why not? Supposing I was living on the farm in Leitrim and got a better farm I would give it up.

CHAIRMAN.—If it was worth your while you would give up both farms?

32449. Sir FRANCIS MOWATT.—What is the size of the second farm?—The other farm, the agricultural holding, is sixty acres, and the Leitrim farm is twenty-three acres.

32450. CHAIRMAN.—Are the people living around Fermanagh poor?—The land is of bad quality, and the people are poor.

32451. There is not much difference in the condition of the people?—The only difference is this, the quality of the land is the same, but the farms are larger.

32452. Is it mountain land?—Yes.

32453. Who is the landlord?—In Leitrim it is the Tottenham estate and in Fermanagh Mrs. Grey.

32454. Sir FRANCIS MOWATT.—Does your father employ any labour, or is all the labour done by the family?—At certain seasons of the year we employ labour.

32455. CHAIRMAN.—Do you imagine if the sixty acre farm were broken up that it would help them at all?—Of course, it would.

32456. Sir JOHN COLOMB.—What is the valuation of the sixty acre farm?—Fourteen pounds (£14). I may mention that on the Tottenham estate that has been sold to the tenants the agreement has been signed. I believe the money has not been paid yet. The people signed the agreements not because they considered the bargain was good, but were morally forced to buy. A number of them were threatened with eviction—there were a number of evicted farms on the estate—just to relieve pressure for the time being.

32457. CHAIRMAN.—Were they in arrears?—In all cases.

32458. Sir JOHN COLOMB.—All the tenants?—I believe so.

32459. How much arrears?—The average five or six and some seven or eight years' rent. They were threatened with procedure for recovery.

32460. By any process of eviction not more than two years could be recovered?—No, but they could proceed again.

32461. Most Rev. Dr. O'DONNELL.—By ordinary process of law?—Yes; I think so.

32462. Sir JOHN COLOMB.—It is in the power of the judge to spread payment over a number of years?—They are unable to pay the rent without having in addition to pay instalments of arrears. The holdings are not sufficient to pay any rent.

32463. Were the rents fixed by the Court?—In some cases. Owing to the evictions there were a lot of future tenancies.

32464. Can you tell me had the tenants the rents fixed by the Court?—Some of them.

32465. Sir FRANCIS MOWATT.—Have many of those tenants relatives in America?—I would say seventy-five per cent. of them have relatives or children there.

32466. Do they assist to pay the rent?—Yes, and go to England and Scotland.

32467. It would seem as if during the last six years they paid no rent they used the remittances or spent them in some other way?—They did not fall into those arrears one year after the other. Probably it would be increasing for twenty-five or thirty years.

32468. Sir JOHN COLOMB.—Are the people on the property round the Tottenham estate the same?—Yes; on the Cullum estate there were eleven that were threatened with eviction. The entire tenantry purchased; nine of them were going to be evicted—two of them had settled—nine remained unsettled until they signed the agreement to purchase. They purchased at a high price sooner than be thrown outside.

32469. Most Rev. Dr. O'DONNELL.—Under stress?—Yes, and that is what occurred all over the country.

32470. Sir FRANCIS MOWATT.—What is your father's name?—Denis. The address is Drumcully, Kiltyclogher, and Corracloon, Kiltyclogher. The district is like every other district in North Leitrim, badly drained. It is in a bad way for a proper system of arterial drainage. The rivers are blocked up. The small farms cannot be drained until the leading streams are opened up. Anybody who understands anything about the country knows that when the lands are flooded with water it is impossible for them to produce a crop. It would be very beneficial to the district if the rivers were opened.

32471. Do you think the tenants would drain?—I believe they would if the larger streams were opened. In my opinion the Congested Districts Board have the confidence of the people. Although the Kiltyclogher district has derived very little benefit in the past we have great hopes for the future. We believe if the income of the Board is increased that they are willing and will be able to improve the condition of the country. I may also mention that any efforts they make will be seconded by the people of the district. If they would erect a corn mill in the district it would be a very useful thing. The people have to carry the corn to a mill seven or eight or ten miles. There is an old unused mill that could be purchased by the Board and put up at very little expense.

32472. Is that a water power mill?—Yes.

32473. Sir JOHN COLOMB.—Are there any disused water mills in your neighbourhood?—Yes.

32474. Going to ruin?—Yes.

32475. Can you give me any idea how long ago it is since they were worked?—The mill I am thinking of was last used about twenty-five years ago.

32476. Do you attribute the falling off in corn grown in this district to the fact of the shutting up of the mills?—No, sir, not in this case, because there is quite sufficient corn to keep the mill working.

Mr. JOHN GILROY examined.

32477. CHAIRMAN.—Where do you reside?—At Mullagh, Dromahair.

32478. Are you a farmer?—I am a farmer with about fifteen acres. My father owns the farm; it is mountain land. We own two portions of land, and presently I am living on one of them. We have cattle on them, keep cows, rear calves and pigs and poultry and everything that a farmer has about his place.

32479. What sort of cattle?—We keep milch cows.

32480. Where do you sell the milk?—At Dromahair Creamery. We keep seven cows. They do not all calve at a regular time.

32481. What do you feed them and the calves on?—On grass.

32482. When they are quite young do you give them separated milk?—Yes, with the addition of Indian meal, and sometimes a little flour.

32483. Did you ever try cod liver oil?—No; we think it rather expensive for a calf.

32484. Did you ever hear of it being used in this way?—Yes, I have heard of it.

32485. They say it works out cheaper than giving whole milk?—What I wish to bring under your notice is the nature of congestion that exists in my particular district, one of the poorest in North Leitrim, and we have derived no benefit from the Board.

32486. Most Rev. Dr. O'DONNELL.—Is it scheduled?—No.

32487. CHAIRMAN.—You want it to be scheduled?—Yes, that is my desire. In Mullagh there are twenty-four tenants, of whom seventeen are under five pounds (£5) valuation, and six do not exceed ten pounds (£10), and the valuation of one holding is thirteen pounds (£13). There are eight of those tenants in Mullagh with valuations from ten shillings to twenty-five shillings with two and three acres of very bad land, and men rearing families to the extent of five or six.

32488. What prevents it being scheduled?—In Drumlease there are two thousand acres of untenanted land, and the Whyte Estate adjoins this. This is the Fox Estate. It has recently been purchased. In 1902 it had been purchased by the Land Commission under the Ashbourne Act, and it has done little good for the time. It has not done sufficient good to enable the people to live on the land. The holdings are too small, and are not able to raise sufficient crops to rear enough cattle.

32489. When you say bought by the Land Commission, do you mean to say that the tenants bought through the medium of the Land Commission?—Yes, in 1902.

32490. Sir JOHN COLOMB.—It could not have been under the Ashbourne Act it was bought, as the Ashbourne money was used up at the time?—It was said to be the Ashbourne Act under which it was bought; 1902 was the year it was bought. There are other townlands which are also congested. There is Bohey, which is in the neighbourhood of Mullagh, and in it there are fifteen tenants, and in nine cases the valuation does not exceed five pounds (£5), and the most of them are from a pound to one pound five (£1 5*s.*) and two pounds (£2), which shows it is impossible for these people to exist under any favourable conditions on those patches of land. There is another townland which also adjoins Mullagh, Rockvalley, where there are twelve tenants, ten of them with a valuation under five pounds (£5), and most of them range from ten shillings to twenty-five shillings (£1 5*s.*) There are two over five pounds (£5) and under ten pounds (£10). There is a grazing ranch locally known as Moneyduff. One witness has mentioned this ranch with a view to

Apr. 23, 1907.

Mr. John Gilroy.

getting it cut up. It adjoins this place, and in years gone by, before the United Irish League got so rooted, it was used by the people for grazing. They used to graze cows and go and milk the cows there, and bring the milk home and keep an extra cow through using this grazing land. The people stopped that.

32491. CHAIRMAN.—They wanted to force the man to sell?—They wanted to force the man to sell, and they sacrificed the ways of living they had. They abstained from sending the cattle to it. With a view to have this ranch bought, I would bring under your notice to migrate some of those tenants.

32492. How many acres are in it?—Over four hundred acres. Mr. C. B. Whyte is the landlord.

32493. Has he cattle on it?—No.

32494. And it is not being used for agricultural purposes?—No, not in my memory.

32495. Has the landlord been approached at all?—It is not on the property I live on, but nevertheless the people in my district used to depend on it to graze cows on it during the summer season.

32496. Sir JOHN COLOMB.—That is, they paid for the grazing?—Yes.

32497. He took in grazing cattle from the district?—Yes. It was tenanted land at one time, and waste land, and he turned it into a grazing farm.

32498. Was it evicted?—Yes.

32499. CHAIRMAN.—Where does the landlord live?—At Carrick-on-Shannon. You have heard, I am sure, of Lough Gill, and if there was a steamer put upon it it would develop the tourist traffic coming through Sligo towards Dromahair. It would circulate money, and bring people into the country.

32500. A boat running from Sligo round Lough Gill might help Sligo?—It could be used for bringing cargo from Sligo as well. In Mullagh, and in and around there the supply of turf is nearly exhausted, and a great want would be met by having a line constructed from Arigna down to Dromahair to convey the coal at a cheap rate. It is also too dear at present to buy. They could not afford to buy it at from one and fourpence to one and fivepence per cwt. In a few years they will have no turbary at all; in fact the way it is going it will be a serious matter to get fire at all.

32501. How far is Arigna from any part of the lake?—About sixteen miles by road.

32502. They would have to make a railway to convey the coal?—Yes, from the south end of Leitrim.

The Commission adjourned.

SIXTY-EIGHTH PUBLIC SITTING.

THURSDAY, 25th APRIL, 1907.

AT 11.0 O'CLOCK, A.M.,

At the Courthouse, Carrick-on-Shannon.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; The Right Hon. Sir FRANCIS MOWATT, G.C.B; Most Rev. Dr. O'DONNELL; WALTER KAVANAGH, Esq., D.L.; CONOR O'KELLY, Esq., M.P.; ANGUS SUTHERLAND, Esq.; and WALTER CALLAN, Esq., Secretary.

Very Rev. Canon GILLIGAN examined.

Apr. 25, 1907.
Very Rev. Canon Gilligan.

32503. CHAIRMAN.—Do you represent the Leitrim County Council?—Yes, I have been nominated to give evidence to-day. I am parish priest of the parish of Kiltoghert in which is Carrick-on-Shannon.

32504. Have you made any notes of evidence?—Well, now, very little. I have very little evidence to give, I must candidly say, but I have a point or two. There are a couple of things I wish to say.

32505. Will you tell us what you want to say?—Yes. In the parish of Kiltoghert, which is a large parish, there is congestion to the extent of about fifty families. Those fifty families are extremely poor. They have a very small amount of land—half an acre or an acre, or, at the very most, two acres, and they have struggled to live in the past by going to England and Scotland for harvest as long as they could get employment to earn money to pay the little rent that is on them, and to try to tide over the winter. I think it is not scheduled as a congested district, but all the same the congestion is there, and the fifty poor families are there, about twenty not far from this town, Carrick-on-Shannon, and about thirty of them out in a large poor district called Gowell. Now I believe that these fifty families can be greatly relieved and improved by providing them with small farms and suitable houses and offices, and the remedy is very close. There are three large ranches of land—good land, in the hands of three occupiers, not agricultural, all grazed, and I understand that those occupiers of these three large ranches are quite disposed to allow this land or part of it to be appropriated, and they are willing to sell to the Congested Districts Board in order to provide these poor people with suitable premises.

32506. Can you tell us the names of those three men?—Well, is it right for me to mention them?

32507. Well, it would help us?—Well, I will tell you. The first is Mr. MacDermot of the Bush Hotel, where the Commissioners are staying. I have just had a conversation with him, and he says that he is quite willing to sell. And I asked him about another gentleman who has a very large ranch. I have not spoken to the gentleman myself. He is Mr. Wilton Vaugh, the sub-sheriff. I have not it from Mr. Vaugh himself, but Mr. MacDermot tells me that this Mr. Vaugh if he got a fair price for some of the land would be willing to sell in order to allow the Government to provide for these poor people.

32508. Who is the third?—The third is Mrs. Harrison, who has a large lot of land.

32509. Have you any idea of the extent of that grass land?—Well, I should say, altogether over 500 acres.

32510. Do you know how many Mr. MacDermot has got?—No; I am not made up on the extent of each particular ranch of this land.

32511. But the three together would make up 500 acres?—They would make up about that, but I cannot give anything definite on that because I am not made up on it, but it is very large, and it is the best part of this country. It lies east of Carrick-on-Shannon, all grass land.

32512. Are those three people all judicial tenants?—Well, I do not think they are. I do not know are they judicial tenants at all.

32513. What are they?—They have these large grazing farms, but whether they have got a rent fixed by the Land Commission Court I am not able to say. I am nearly sure that Mr. Vaugh did not.

32514. None of them purchased?—I think they are present in court.

32515. Did they purchase?—I think all, but I think that Mr. Vaugh is very independent.

32516. Do you know who the landlord is?—I think the largest place belongs to a Mr. La Touche, and it was once occupied by tenants and they were all cleared out in the bad times, and then it was all left to this one man.

32517. What do you call the bad times—in the famine, or the 'eighties?—Well, I think that probably since 1848, from time to time.

32518. After the famine times?—That, and since, from time to time. Tenants have always been broken down unfortunately in Ireland and they have been cleared out. We are hardly ever without a number of evictions all over Ireland. It is quite easy, and I think it is quite a practicable case that a sufficient amount of this land could be got. I think the occupiers are very reasonable and agreeable and generous and willing, as far as my information goes, to allow these poor people to be provided for. And there would be no necessity for migration or sending them away to another part of the country. I believe they would not like to leave their own little neighbourhoods. They woud rather be provided for at home if they could. And then there is another point. There is no other way of providing for these poor people, because it is not an agricultural county. The soil is generally wet. It has a retentive subsoil. Not a drop of water can get down. It is all on the surface, and therefore it is bad for tillage, and even if it were drained, drains twelve inches wide and nine inches deep would require to be only six feet apart to be effective. The water remains on the surface the whole time. There is only about nine inches of soil. I think it is very well for grass, and the only way that the farmers can work it, I understand, is to graze it, and therefore it is not an agricultural district and there is not employment for these poor people as farm labourers and they have to go away to England and Scotland every year to earn a bit of money to help them to pay rent and taxes and get them over the year. And that is the way the thing is going on.

32519. You think that the fact you have just told us, the unsuitability of the soil for tillage, accounts for the failure of the former small tenants?—I do, inasmuch as they could get no employment.

32520. But you told us, I think, that during the famine times and since, a lot of those small holdings on which these people used to live were amalgamated into the large ranches?—Yes; but I think very few of those people remain now; I think they are gone; they have emigrated to America.

32521. But my point is this: was the failure of those small holders due to the unsuitability of the soil for

Apr. 25, 1907.

Very Rev. Canon Gilligan.

tillage?—No, I should say not. They broke down and were not able to pay their rent in the past, just as they have in so many other places in Ireland, and they were evicted.

32522. Did they try to till their holdings?—I think they did. Would not the failure of the potato in 1848 and 1849 account for the clearing out of over two millions of the population of Ireland—starvation and famine fever? They had not wherewith to live, and that would account for the utter breakdown of everything in Ireland.

32523. I do not think you quite understand. Do you think it is possible that the small holders—you know what I mean by the small holders—?—The small farmers with five to ten acres.

32524. Do you think it is possible for a man of that sort to get along on land unless he has a certain amount of land to till—is not a certain amount of tilling an essential condition of success in small holdings?—Yes.

32525. You would agree to that?—The fine land that is in the ranch is always good tillage land. It is good tillage land, fine limestone land, fit for cattle and sheep—the three big ranches that I allude to—very good land. They are the best land in the parish of Kitoghert.

32526. Then I misunderstood you. When you say that the soil is so shallow, that it is not suitable for tillage, you do not mean that land?—Not at all. I do not mean the large grass farms; I only allude to the rest of the parish; and therefore these farm labourers can get no employment. Farmers have no more than they can do themselves.

32527. Would you go so far as to say in your experience of the parish that the only suitable tillage lands are the three grass ranches which you have described here?—Oh, no. There is not a farmer in the parish, that is six or seven hundred families, but has a small amount of land suitable for tillage. He has drained it to some extent; he has manured it, and petted it, and he has about an acre of tillage or so. It is a very small amount of tillage that even the biggest farmers have; it is all grazing.

32528. Then where is the land that you told us was so shallow that it could not be tilled?—It lies from this all the way up to Jamestown, I would say about four miles out, and both sides of the road are rough as you go on—Whyte's—and at the very town of Carrick-on-Shannon up on the hill on which the convent stands there is no more than nine inches of soil, and you cannot walk over the land there it is so wet.

32529. And who has got that land now?—It belongs to Mrs. Whyte.

32530. Is that a ranch?—Oh, no, it is a town park; but even the town parks round Carrick-on-Shannon are wet. And to give you an idea of the nature of the soil, you could walk south and east and it is all wet, it is a retentive bottom; but going due east, where these three vast grazing farms are, it is good land, fine grazing land, suitable for sheep. It is limestone, and therefore the water goes down in the joints.

32531. There is no difference between a town park and a ranch except that a town park is near the town?—I am not making any distinction between them. I am only giving you the character of the soil, and even close up to the town of Carrick-on-Shannon. And these town parks that have been so manured, and cultivated and petted in every way, they are in grass, and they are wet, extremely wet, and the land that is on outwards is the same, not suited, therefore, for tillage, and grows a crop of rushes.

32532. I am asking only in order to understand exactly. Would you say that the land here is such that great care must be taken before it can be allotted to small holders for tillage purposes?—No. The land that I allude to is suitable to be allotted to small holders, and fit to do anything at any moment. It is limestone land, it is good land, and it can be grazed or farmed as an agricultural farm straight off. All the occupier would want is to build a suitable cottage and suitable offices, and he would get on.

32533. But on the other land which is at present under grass?—All the other land that is under grass is saturated with water.

32534. And there is a great difference between the various classes of land in this locality?—Oh, yes, indeed. There is only the one district at all suitable for accommodating the poor class, the congested class, out there, that is the three big ranches, as I pointed out before.

32535. Most Rev. Dr. O'Donnell.—You stated that the land on these three large ranches is about the best suited for agriculture of all the land in the parish?—Yes.

32536. You would therefore desire to take that land?—Yes, or portion of it. It would not be all necessary, I think, at all.

32537. You think that it is amply sufficient to enlarge the small holdings that you have called the attention of the Commission to?—Yes, amply, and more than sufficient.

32538. And it is situated pretty near these small holdings?—It is. I suppose a mile or two would be the most. They would have to leave the present wretched cabins, and new houses and offices would have to be built and provided for them, and they would be willing to leave these, and three or four of these small wretched holdings might be amalgamated then into one. There is bog accommodation attached.

32539. And on those three or four amalgamated holdings would there be a few acres of good land that might be tilled to advantage?—Oh, yes, far more; nearly all suitable for tillage. There might be a bit on the back of Sheemore unfit for tillage. Sheemore means in Irish the Big Fairy. She has not much flesh on her back that is soil—mostly bare rock.

32540. Now let us consider the small holdings that have to be enlarged?—Yes.

32541. Suppose two men left that locality and got good land that is now grazed would the two holdings left behind, when added to that of a neighbour, enable that neighbour to get on where he is?—Well, two might not be sufficient. They are small. I would take three or four in some cases. But I think the amalgamation of these little holdings would enable some of them to get on and be able to live.

32542. On the two or three amalgamated holdings in that particular locality would there be a couple of acres that would produce good crops?—Yes, there would be fully two acres suitable for tillage, because it is from half an acre in each case. And there would be three or four acres suitable for grazing. You would have both there, agricultural and grazing ground, in such an amalgamated farm consisting of four or five small ones.

32543. Sir Francis Mowatt.—Supposing there would be fifty families in the parish in extreme poverty, whom you propose to give part of the ranches to, I think you said that they were holding as little as one or two acres—did you not say so?—They range from half an acre to two acres.

32544. Then would not you call these agricultural labourers rather than small farmers?—Would I what?

32545. Would not you call these small holders agricultural labourers, and not small farmers?—Yes; I would call them agricultural labourers, because they have no grass land at present. They have only small gardens to grow roots such as potatoes, turnips, and mangolds, and they try to feed some pigs; and then they are certainly not grazing farmers at all.

32546. Then they look about for labour in order to make their living?—Yes, and cannot find it, because it is not an agricultural country, and they have to go therefore to England and Scotland.

32547. As labourers?—As labourers, to earn some money.

32548. Sir John Colomb.—Is it good land on the ranches?—Yes.

32549. Is that high land, the poor land being in the valley?—Well, there is part of it level, and mostly all high land, on a range of hills. I would not call them mountains, but it is considerably elevated, and good land. And it is an undulating country. You have ups and downs, and along where the road goes there is a low valley and a nice undulating country rising up on each side again and along there there are some comfortable farmers. There are none of the poor congested people at all on that land, or near it. It is only in another place, a couple of miles, as I described, from this grazing land, that the poor holdings are.

32550. Quite so, but I wanted to know this—are the large grazing ranches that you speak of on the higher ground, and is it the case that the small tenants are in the lower land?—Well, they are not in the lower land in that particular district where the ranches are, because they are not in it at all. They are away two miles, in another part of the parish, Kiltoghert, which is on the level. They are

in the district called Gowell, about two miles from the ranches, and there are twenty of them here convenient to Carrick-on-Shannon squatted along the roads with cabins, and very little back gardens, and they are not near the land at all. In fact there are none at all of the poor fifty families that I alluded to near this good land.

32551. Now, on these small holdings on the kind that you describe they grow their own potatoes?—Oh, they do; they are not wet. They have drained and cultivated the little plots that they have. They have them highly cultivated and drained. But their crops are so small—half an acre or so to two acres.

32552. You mentioned that these small holders were growing turnips and mangels?—Yes, potatoes principally; potatoes, turnips, and mangels.

32553. They do grow turnips and mangels?—They do.

32554. For cattle?—They have no cattle. They may have a pig, the inevitable Irish pig. They have manure. Anyone can grow potatoes, turnips, or mangels that has manure.

32555. Turnips and mangels are grown by the small holders?—It is very rare.

32556. For what do they grow the turnips and mangels?—Pigs. They are very fond of pigs in this part of the country. In Carrick-on-Shannon we have one of the greatest pig fairs in Ireland of that time of year.

32557. Now tell me what is the electoral division where these fifty families you speak of are, or are the fifty families spread over more than one electoral division?—They are in more than one division, I think.

32558. Can you give us two or three of the names of the electoral divisions?—No, but I can get for you each electoral division, and, if necessary, could make out a census of everyone of the poorer tenants and the very names of the families and the extent of rental. I can do all that if it is necessary.

32559. It would be too bad to put you to the trouble of that. We have got all the figures, if you would only give us the names of the electoral divisions. That is all you have to give us?—I am not able to tell you the names of the electoral divisions. I must confess that I am not a politician, and I do not pay much attention to politics. The poor tenants out in the large wild district of Gowell are in one union, but they are in different electoral divisions.

32560. And Gowell is one of them?—Yes, Gowell is the principal one.

32561. Most Rev. Dr. O'Donnell.—But have you not a priest living out in that direction?—I have, and he is an intelligent and active man.

32562. He will be able to give the electoral divisions they live in?—Certainly, he will, and able to give the number of tenants and the poor holding of each one. He will give every assistance in his power.

32563. Were not you anxious to say something about the railways?—Only to fight against everyone of them. They have put already overwhelming taxation on the occupiers of the County Leitrim, which has left the poor farmers overburdened and not able to get on; and any further extension of railways in a poor county where there is not a trace of any prospect of a return would be fatal.

32564. That is if they put on an additional tax?—Yes. There is a doubt whether it would pay to extend the railway in the direction of coal mines or quarries. I am rather inclined to think that it would. In that one instance I am inclined to think that an extension of the railway would be of service and that this line if opened up might pay and give employment.

32565. Sir John Colomb.—Can you tell me what the charge in the pound is for the railway guarantee?—No.

32566. You are aware that one half of the guarantee is charged on the rates, but that the other is a contribution from the State in aid of that?—Yes, but there will be other witnesses here who will, I think, be able to give full information on that point.

Mr. Wilton Vaugh examined.

32567. Chairman.—Will you tell us what evidence you wish to give?—I am a large landholder in this district and pay over £800 a year in rent and taxes. I live at Dromahair, and I have a house within four miles of this town where I formerly lived.

32568. Sir John Colomb.—How much is rent and how much taxes?—I should say about £150 a year in taxes. I pay four shillings in the pound on most of these lands. I know the County Leitrim well, and never yet met an industrious tenant that could not live and pay his rent, no matter how small the farm might be. I have known men better off and more comfortable on five acres than on thirty acres.

32569. Most Rev. Dr. O'Donnell.—Now, do you think a man could live on the small holdings described to us by the last witness?—No, certainly not. I call those labourers. I only heard just the last of his evidence, but a man with only half an acre or an acre and a-half cannot live on that. There must be employment.

32570. Or his holding must be enlarged?—Or his holding must be enlarged; certainly.

32571. Chairman.—You say you never yet met an industrious tenant that could not live and pay his rent no matter how small the farm might be?—Yes; if he had not enough to go on in the land he would try some other way of finding employment and paying his way.

32572. Do you mean to say that in your opinion every holding in the County Leitrim which was rightly considered a farm ought to return sufficient profit every year?—Yes, if properly managed.

32573. Mr. Sutherland.—In other words, you say he could get a comfortable living out of a five acre farm?—He should have more than five acres to do that; but if he has sufficient land and manages it well he is able to make sufficient to pay his rent and live.

32574. Out of half an acre?—I never said that. I do not say even two acres. But I say an honest, industrious man can live on five acres.

32575. But you say no matter how small the farm might be?—If he has not sufficient land he will find some outside work.

32576. And pay rent from outside work?—Yes.

32577. Chairman.—Where do you draw the line?—I would say five acres is the smallest that any man should have.

32578. And anything under five acres you would not consider a farm at all?—Yes.

32579. And would you say that a holding of five acres is a farm?—I have known men with five acres as comfortable as men with thirty acres. My chief faith is in the man himself.

32580. I suppose when it is boiled down to the lowest point it is a question of the quality of the land?—No; the man I depend upon altogether; not so much on the land. I would rather have a good man on five acres than a bad man on thirty acres.

32581. Most Rev. Dr. O'Donnell.—There cannot be any doubt that the man is vastly more important than the land; but would not you consider five acres much too small?—Certainly; I would like to see every man with twenty acres that he would manage. My object is this, merely to show you that it is not so much the land; it is more the man that you have in the place.

32582. Chairman.—Do you really believe that in the poorer districts of the County Leitrim, amongst the mountainy districts, a man, if he is industrious, can always make that farm pay?—He can. That is my experience of the County Leitrim, and I have known it for forty years. I have been born and bred in the county, and my father before me; I have told you that I hold land for which I pay £800 in rent and taxes. I have been in a land agent's office all my life.

32583. Then you speak from your experience?—I know what they do, and how they do it.

32584. Do you consider a man that can do that a good man?—Oh, yes. A man may lose a calf, and may have sickness, and may be disabled through plenty of other causes, but if he is he always comes round again in a very short time if he is the man that I have in my eye. And I have never known a man to lose cattle that he would not get some friend or neighbour to come and help him and put him on his feet again, and he generally comes right. There is very little congestion about this neighbourhood, but there are few electoral divisions in the county in which

Apr. 25, 1907.

Mr. Wilton Vaugh.

you will not meet with congestion, less or more. To remove some of the industrious men, and transplant them on to larger holdings, with capital to work them, is the only remedy, if you could induce them to move or migrate; and if you select the proper men they are bound to succeed, while the farms they leave should be joined on, or cut up so as to enlarge the adjoining holdings.

32585. That is the whole case of migration?—Yes. As to obtaining land for transplanting these men to, plenty can be had if a fair price is given. I hold a farm of 287 acres 1 rood 12 perches on the King Harman Estate, within four or five miles of Carrick-on-Shannon, and when the estate was bought by the Estates Commissioners in 1905, I offered to sell this farm to them at a price that, when invested at 3½ per cent., would give me my net income out of the farm on an average of five years.

32585A. Sir JOHN COLOMB.—You are a tenant purchaser?—No. I did not purchase. I pay rent to the Land Commission. They have bought that estate.

32586. CHAIRMAN.—The farm is a farm of 287 acres. Is that the farm the last witness alluded to?—I would not say, but I think not. It is another district. We will come on to that later on. The farm I am speaking of is in the County Roscommon. We are just on the borders of Roscommon and Leitrim. The Estates Commissioners had the farm inspected, and said it was what would suit them, but they have made no offer, and nothing has been done since about it. When, however, I wrote my terms to their inspector I received the following letter from him, which shows that he could not see his way to proceed further unless I was willing to knock one-third off my terms.

32587. Sir JOHN COLOMB.—Your terms were?—My net income at 3½ per cent., calculated on the average of five years. Shall I read the reply I got?

32587A. CHAIRMAN.—Do please?—Here it is:—

"The Irish Land Commission,

"24, Upper Merrion-street,

"Dublin, *5th April*, 1905.

"*King-Harman Estate.*

"DEAR SIR,—Your note of 1st inst. came in my absence in Wicklow. I am afraid I hardly appreciate the force of your point, *i.e.*, that you should have such a price as, when invested at 3½ per cent., would produce your present income. I am aware that the *principle* has had some recognition in estimating the value of the landlord's interest, but you are the first to propose it in respect of the value of tenant-right, so far as I know. Even if it were considered generally applicable, would not your short connection with the holding, your predecessor's experience in it, &c., have to be considered? Of course any grounds you consider as supporting your views as to the price I shall carefully look into when you submit them to me. As it is, I know nothing of your working of the lands, either as to outgoings or income, but, judging from my inspection in the ordinary way, I think your price altogether too high for the purposes of the Estates Commissioners. Having regard to the way your lands are intersected by good roads, and to the water supply, they would be very convenient for carving up, and if you could see your way to reduce your demands by about a third, our correspondence might result in a purchase.

"Yours very truly,

"JNO. CUNNINGHAM.

"W. Vaugh, Esq., &c., &c.,

"Dromahaire."

32588. Sir JOHN COLOMB.—Did you reduce your demand by one-third—how did it end?—In this way. I asked for £3,000, and told him my net income was £110, and I said, "I will give you the farm for £3,000," and he says there, "Take one-third off that." And I never answered that letter, because I thought there was no good in it; and I have the land still.

32589. Most Rev. Dr. O'DONNELL.—There is a point in the letter about your short connection with the holding?—Yes. That had nothing to do with him.

32590. How long had you had it?—I bought it eight years ago.

32591. How much did you pay for it?—£1,500.

32592. Sir JOHN COLOMB.—That is the tenant's interest?—The tenant's interest.

32593. Most Rev. Dr. O'DONNELL.—And are you now a tenant of the Land Commission?—A tenant of the Land Commission.

32594. That is to say the Land Commission is the landlord?—They are the landlords. I pay them rent every half-year.

32595. And the Estates Commissioners think that farm of yours suitable?—Yes, it is well situated, with good water and good land.

32596. They are aware that seven or eight years ago you gave £1,500 for it?—Yes.

32597. And do you not think it is reasonable for them in these circumstances to ask you to abate the price?—I do not.

32898. They want it for the enlargement of small holdings and you ask £3,000, and they, knowing that £1,500 was the price seven or eight years ago, ask you to abate the price?—I do not think that is anything to them. I have bought it in the market, and I have a right to get what it is worth in the market. Suppose I bought shares in Guinness's at £15 (which I have), and they are now worth £56, should I now be called upon to sell these at £30 because a certain man wanted them?

32599. The price of Guinness's shares is a well-ascertained thing in the market?—Yes.

32600. The price that you would get for that land if it were put up for sale is not generally known, neither is there anything known of your net income except your own statement of it?—But I was prepared to show them the figures.

32601. And anyone in trying to arrive at the value of your property would naturally, I think, look to the price you paid for it seven or eight years ago?—No, my lord; I don't think that would be fair or right. If I was allowed to cut up that farm into lots of thirty acres each, I believe I would get £5,000 for it.

32602. Do you know that the value of land in your district fluctuates in the same way as Guinness's shares?—It has gone up.

32602A. As much as Guinness's?—Oh, not so much as Guinness's.

32603. Why do you ask me to take Guinness's shares as a parallel case?—I only mentioned that as an instance that things might go up. Guinness's shares were at £15. They are now £56. It is one instance to show that I ought not to be called upon to sell a thing at what another man thinks fit to give. If I buy a cow at £10 and that cow improves and is worth £15, am I bound to sell her again at £10 or £12 if I think she is worth £15.

32604. Pardon me for saying that that is not the question. The question is this, whether anyone going to buy a cow, much more land, would not be anxious to know the price paid a little before for the article?—They might, but that should not make the man that had her sell her cheaper or at the price the other man thought she was worth.

32605. Do you not think the price seven or eight years ago has not something to do with the price now?—No, it has nothing. Of course a large farm may be bought cheap, as there are few men able to bid; and if I could cut that up and sell my tenant right I would get £5,000.

32606. It is not usual?—I admit that; but supposing I did.

32607. You are supposing that you had a property in the land which you do not possess, because a tenant has not that right?—I am only saying if it was so.

32608. Has there been any progress in the value of land in the neighbourhood corresponding to that?—I know a case where a farm was sold for £1,000 which five years ago was sold for £700, and another where a farm for which a man paid £1,000 was sold last year for £1,400. There are two instances.

32609. I think a third off the price that you require would leave the price very near the increase that has taken place in the case of the two farms to which you refer?—But I bought mine far cheaper.

32610. Did not you think it was worth while to reply to that letter from the Estates Commissioners'

official?—Well, I did not answer because I did not think he came to me in the right way.

32611. The Commissioners seemed to be willing to give you an increase of price?—But I did not think it was enough.

32612. Why did not you argue it out?—Because I thought he took a wrong view of it altogether. I consider he had no business to speak of "your short tenure of the farm." What is that to him? I bought out the tenant's interest.

32613. Mr. SUTHERLAND.—What is it that enables you to appreciate the price of the land?—I believe it to be worth it to me.

32614. This does not arise from any expenditure?—No; from no expenditure of mine.

32615. Sir JOHN COLOMB.—I want to get back to that very important case. You bought the tenant's interest in the farm seven or eight years ago?—Yes, I bought it in the Landed Estates Court.

32616. You bought the tenant's interest in the farm in the Landed Estates Court when it was put up by auction, for £1,500. Tell me, what is the rent of that farm?—The rent is £217 9*s.* yearly.

32617. It is not a judicial rent?—I hold under a lease, the term of which is unexpired.

32618. What is the term in the lease?—Three lives, and forty years after the last life has expired.

32619. What is the rent?—£217 9*s.* yearly.

32620. And it is a lease?—A lease.

32621. In your opinion if that farm was put up for auction it would bring a great deal more than the £2,000 that the Estates Commissioners offer?—I believe so. I would not take £2,000 for it from anyone. I would not take it. If any man in this court was to offer me £2,000 for that farm I would not take it.

32622. Do you consider that the answer of the Estates Commissioners would be prejudicial to the sale of your farm, supposing that you died and that your executors had to sell it—would that letter be likely to prejudice your security?—Oh, I do not know. He only made a suggestion that if I would take off one-third he would see his way to make a bargain. It is a usual thing in a fair. I am in a fair every week, and if I ask a man what is the price that he wants, and he say £10, and I would say, "Take off a third and I will deal with you." I do not think there was anything in his letter more than that.

32623. Are any of those lives still in being?—Yes; and I have forty years after that.

32624. Forty years after the death of the last survivor?—Yes, that is the term of the lease.

32625. Then the reversion is to the Estates Commissioners?—Yes; they have bought the interest in the King-Harman estate.

32626. And unless they could break the leases they have no power to resume?—No; they cannot resume as long as I pay the rent.

32627. Most Rev. Dr. O'DONNELL.—Would not you consider that the fact of a series of years having expired is a deteriorating element in the value of your property?—Well, unless the Land Commission commenced to put on rack rents and raise the rents, I do not see how they could change it very much.

32628. Sir JOHN COLOMB.—They have no power to raise the rent?—Not till forty years after the death of the last survivor. They might then do what they liked with it. I will be gone anyway.

32629. CHAIRMAN.—From the third paragraph of your precis I gather that you are in favour of what is commonly called migration?—Certainly, my lord.

32630. That is transplanting men?—Transplanting men.

32631. From poorer holdings to better land?—To better land that can be got on fair terms.

32632. Sir JOHN COLOMB.—You do not come within the section of the Act that enables a lease to be broken and a fair rent fixed?—Well, I believe I do; but I do not think I would gain anything in the Land Court. I believe the farm is cheap enough. I would have tried it long ago if I thought I could make anything of it.

32633. Have you the option of availing yourself of the terms of the Act of 1887 that broke leases?—The Act did not break leases, but it gave me the power of going into court and having the rent reduced by the Sub-Commission if it was too dear.

32634. And if you thought that you would gain by that you could do so?—Yes. I have power to do so if I thought I could gain anything by it.

32635. Because the land is so valuable?—Yes. The value is £100 over the rent I pay.

Apr. 25, 1907.

Mr. Wilton Vaugh.

32636. CHAIRMAN.—Now, Mr. Vaugh, you have told me you were in favour of migration, but your view is that if the Estates Commissioners buy your land they should pay you a price which, invested at 3½ per cent., would return you your net income?—My net income in producing my receipts and vouching my accounts.

32637. Do you imagine that the reason that you have been enabled to make a profit out of your land is due to your own experience, knowledge, and efficiency in farming, or due to the land itself?—It is due to the land itself, my lord.

32638. And is not it also due to the fact that you know, perhaps, a good deal about farming yourself?—Well, I know a good deal about farming myself, but this farm has produced the same income for years upon years before I got it.

32639. The same income?—The same income.

32640. Do you mean that you expect that an ordinary average farmer, if he got your land now, would make more?—He would make more, because a middleman would make more than I am making.

32641. Would an ordinary individual, who might not be such a good farmer as you, be able to make as much as you?—Certainly he would, and if I could pay attention to the farm and stock it myself as I do my other farms, I am perfectly certain I would make £200 a year out of it.

32642. And do you sub-let it?—This farm was in the hands of the National Bank for years before I bought it. I bought it at a public auction, and they sold it. They had the grazing of it let to three men for years before I bought it. I bought it, and then I got the position of sub-sheriff of this county, and I found I could not attend to it, and I left the land in the hands of these three men ever since, and never changed the rents or anything else, but just left it as I got it, and I get £110 a year profit.

32643. And you sub-let?—I sub-let. It was sub-let before I bought it, and I never made the slightest change of men or rent or anything else.

32644. Sir JOHN COLOMB.—It is on the eleven months' system?—Yes, and had been for years before I bought it.

32645. And you never disturbed them?—I never disturbed them. They are the same men and the same rents.

32646. CHAIRMAN.—In your opinion, if you broke up your farm and put men in it they could return more out of it?—They could return more out of it, because they could give their time and attention to it and manage it better than I could.

32647. And do you think that from the same point of view it would be a perfectly sound investment to buy you out on the basis of your net income and establish small people upon it?—I believe they never will get such a chance again in this county, because it is seldom they will get such land as that, so circumstanced and so good in every way. It lies on the main road between Carrick-on-Shannon and Boyle.

32648. The other point is that if the State purchases land from anybody like yourself it is not a concern of theirs what price you paid for it?—No.

32649. The only basis they can possibly go on is what the land is worth to the present occupier?—Yes, as can be shown by receipts.

32650. As can be shown by receipts?—For the last five years. I do not think it is anything to anybody what I paid for it. It is what it is worth now, and what it is worth to me.

32651. Mr. SUTHERLAND.—Did you ever consider the possible effects of popular feeling in such matters?—A man is a fool who cannot see his way to carry a burden on his back. I am not a fool. No one takes me for a fool in this county at least. I am in a position to prove that my net average income from the lands has been £110 per annum, and I asked £3,000 for my interest. I think this instance shows that the chief object in demanding compulsory powers is to be able to compel landlords, tenants, shopkeepers, and all other landholders to sell their landed property cheap. The Estates Commissioners have an inspector going all through this county, making inquiries about evicted tenants for the last six months. What good he has done I cannot see, except raising false hopes

Apr. 25, 1907.

Mr. Wilton Vaugh.

in many men, and filling others with fear and alarm. Not a single evicted tenant that has been away from his holding has been reinstated, or received land instead. I told the inspector that, if he wanted land for this purpose, I was prepared to sell him 500 acres of good land, and I gave him the full particulars of same, but I have never heard from him or the Estates Commissioners about the matter. I suppose these are the lands that Father Gilligan referred to. They are within four miles of this town, the town of Carrick-on-Shannon. I know others also willing to sell at a fair price. When estates are sold under the Purchase Acts it would be most desirable to find some effective means of preventing sub-division, and the reckless cutting down of timber by the tenants. The splitting up of grass lands into small farms would not greatly affect the cattle trade in County Leitrim, because there is very little land in this county that could be used in this way. But the general cutting up of grass lands, or what is called abolishing the large graziers, would be disastrous to the cattle trade in Ireland generally. I can give my reasons for this opinion.

32652. CHAIRMAN.—Give me your reasons?—Well, my lord, small farmers will not keep calves till they grow to an age at which they can be fattened, and if we had not graziers to buy those calves from us at one year old, or a year and a half old, and keep them on for another year or a little longer to mature them, I think our small cattle would be considerably reduced in price unless these men come and buy them from us. The small farmers now get from £7 to £8 10*s.* for a good year old, and if a man kept him on till he was a three-year-old he might have to sell him for £12, and he would have to feed him for two years more. But when he can sell those cattle at a year or a year and a half old for £7, or £8 10*s.*, these men, the large farmers and graziers, come in and buy these cattle from him, and they have the means of putting them in the way of sending to the English and Scotch markets.

32653. You said that at present people living on poor lands sell their cattle at from a year old?—Yes.

32654. Then cattle go to the better lands, which are at present held probably by the large farmers?—Yes.

32655. And those people keep the beasts till they are advanced enough to go to England and Scotland?—Yes.

32656. What is there to prevent the man who moves from a bad holding to a good holding on to the very land that you describe, being able to do exactly what these large farmers are doing now?—Why should he, because he can feed three small beasts for two large ones, and he has double the profit. He can feed three calves now for two year olds. If he gets £8 for these year olds, would not it pay him far better than to keep them for another year, and get perhaps £10 when he can get £7 or £8 after the first year.

32657. The present big grazing farmer takes year-olds?—Or two year olds.

32658. But he does not breed himself?—No, not generally.

32659. If it pays him to keep cattle till they are three years old it would pay the small man?—He will not do it. He will get £7 to £8 10*s.* for a calf a year old, and he can rear three of those calves where he could only keep two of the large ones, and it pays him double. He won't keep the large cattle so long as he can keep the young ones.

32660. Why do not the big farmers do that?—Because they won't go to the trouble of rearing calves, and you cannot have calves without cows, and you must have a staff of servants to milk the cows, and the big graziers will not do so.

32661. But if it is more profitable to rear calves and sell them I cannot see why the big graziers do not do it?—Well, it is not done in this part of the country.

32662. Mr. SUTHERLAND.—Although he has got such a good farm?—Well, he has not got the help. The big man must employ others to do it, and the small farmer employs his own family. It is the small farmer that is making money on the cattle.

32663. Sir JOHN COLOMB.—Is there not another obstacle in the way of raising cattle on the small farms that you describe—namely, that the process of maturing the year-old cattle would require a good range?—Of course, it would.

32664. And that large range cannot be provided on small holdings?—Certainly not.

32665. And is not that a contributory cause to the fact that a small farmer really cannot keep his cattle to maturity?—That is the case. Unless the big cattle have got a run they won't improve, but the principal reason is that small calves pay him better than older cattle.

32666. Mr. SUTHERLAND.—Have the cattle any exercise at all?—Yes.

32667. In my country we do not give them any exercise at all?—We prepare them and send them all to you, and you feed them up, and give them everything to eat, and you have all the profits.

32668. Mr. KAVANAGH.—Is not there a great trade in Scotland for yearlings, too?—They are generally one and a half year olds, and then they send them on.

32669. The large grazier that is supposed to get them is not the only buyer in the market?—He keeps them for a year or a year and a half, and then sends them over to Scotland or England. He just holds them for a year or a year and a half, sometimes two years, and then he sends them on to the Englishman or Scotchman to finish them.

32670. He buys direct from the small farmer in the fair?—He buys from any man he meets. In my experience the rents of small holdings in County Leitrim have always been well paid, and I can hand in figures to prove this.

32671. Sir JOHN COLOMB.—When you consider the state of Ireland generally, the fact that 72 per cent. of the whole of the holdings in Ireland are under 30 acres, do you consider that these big ranches are the necessary economic result to meet the wants of the small holders?—Quite so. If they had not those big farmers to buy the cattle from the small ones, where would they sell them.

32672. And as you diminish the ranches and the graziers that fulfil that duty, so you are likely to diminish the demand for young cattle, and consequently reduce the price?—No doubt of it. If you have a lot of calves in the fair and there are only a few men to buy them they are bound to be sold cheaper while if you have a number of men to buy them they will fetch a fair price.

32673. Most Rev. Dr. O'DONNELL.—Have you any experience of stall-feeding?—No, I have not.

32674. Have you considered at all whether under a system of tillage conducted by the occupiers on the larger holdings it would not be possible for the occupiers to rear calves, and by the use of the root crops grown upon them to stall-feed?—Well, if we were in more solvent circumstances than we are in at present we might do that. But if the small farmer were a solvent man, and likely to pay the claims of the shopkeeper and other out-goings instead of telling him to stall-feed, I would like to see him growing an extent of green crops, and feeding the young cattle with the crops and bringing them to a better condition. There is not a beast in the fairs of the County Leitrim that if better fed would not be worth a pound more. I say, never mind cake—leave that to Englishmen; never mind stall-feeding, but feed the young cattle better.

32675. If we had a system of more intensive cultivation with better instruction and better treatment of the soil would there be any great reason for fearing that the occupiers could not also stall-feed?—Oh, my lord, I certainly say that they could if they have the means to carry that on, and that they see that it pays them.

32676. CHAIRMAN.—You said to Mr. Sutherland—"You have all the profits." You mean that Scotchmen have all the profits?—They generally have. I bought some cattle for a gentleman in Yorkshire, Mr. Lane Fox. I bought them at £11 10*s.*, and sent them over to him in October, and not long ago he told me that he got £26 a head for them.

32677. How much did you pay for them?—£11 10*s.* I sent them over to him, and of course he gave them cake and every mortal thing he could.

32678. If that is so why it not that done in Ireland?—Well, we are behind the times, I suppose, and we have not the means to do it.

32679. And that means that agricultural education is not what it should be?—Oh, it is not, indeed.

32680. But there is no reason it should not be done in Ireland?—There is no reason it should not be done if we had the way and the means. We want the capital.

32681. But the application of capital would follow, would not it?—Oh, certainly.

32682. If you could only get people to understand that the profit of the cattle trade is in the fat beast they would then do it?—Yes, if we could get our people up to that, my lord.

32683. That is a matter of education?—A matter of education and capital.

32684. But on the present system you are giving the principal profits of the cattle trade to England and Scotland?—We are.

32685. And would you like to see the system changed, that Ireland should derive the principal profits from the cattle which she raises herself?—I would like it if it could be done.

32686. And that could only be done by a system of feeding and fattening the cattle in this country?—Yes, my lord.

32687. Now, you also, I think, stated to Sir John and Mr. Sutherland that you could not fatten beasts till three years old?—No, my lord.

32688. Do you mean to say that there are no fat beasts killed at an earlier age in England?—Oh, I know that, my lord, but it is hard for a man to fatten a calf with those other demands on his time. They must be kept in good condition and hand-fed, and all other sorts of food that we have not in this country; nor have we the means of doing it or the way of doing it or the house accommodation, and it is not done in this country.

32689. That is only because it is not the fashion, but there is no reason, is there, why you should not be able to get a beast fat and killed at two years old?—Oh, I think you would have to feed them continually with meal and cake and everything of that kind from the time they are calved till they are two years old.

32690. And would you get a big price?—Yes.

32691. And there are in England and Scotland numbers of beasts that are fattened in that way, and killed fat?—Yes, my lord, and they often fetch 5*s*. a cwt. more than other beasts.

32692. And could you get the holder of a moderate-sized farm to understand that is there any reason why he should not keep a beast and fatten it in the same way?—Not the slightest; if he could do that and do without the money which fed the beast till he sold the animal there is nothing in the world to prevent him doing it.

32693. That is to say, that all that he lacks now is the knowledge and the possession of a certain amount of capital?—That is all that is wanted.

32694. And is not it the fact that if a man was intelligent and knew something of his business he could borrow money from the bank for that purpose?—No; they would not lend money for fattening cattle, my lord.

32695. But for equipping your farm?—No. To make drains in it, and for houses. That is all.

32696. But the Congested Districts Board do. They have a system by which they can lend money to a man for that purpose. Would that meet your view, that if he has got anyone that would lend him the money and lend it cheap there is nothing to prevent him going on?—For the loan of the money?

32697. If you got an intelligent man with a small holding—I do not say of 10 acres, but of 30 acres—who really knew the details and secrets of the cattle trade, so long as he would be able to get a cheap loan from the Congested Districts Board and in that way had command of capital, there is no reason why he should not keep his beast and fatten it?—None whatever.

32698. Sir John Colomb.—You mentioned Mr. Lane Fox as an illustration of what is done on the other side of the water?—Yes.

32699. But is not Mr. Lane Fox able to carry on those operations in England on a large scale, an enormous scale?—Of course he does.

32700. And is not it the case that the men who make those profits by fattening cattle are not the small occupiers in England and Scotland but the very big ones?—Oh, not at all. The very big ones.

32701. And does not it narrow itself down to the point that what is done by the very big men in England and Scotland cannot be done by the small men in Ireland?—Well, the man that I mentioned is a very big man. He spares nothing.

32702. And, therefore, the comparison you make is between the very large holders in England and Scotland and the smaller holders in Ireland. It does not follow that because the big holder can do it in one country the small holder can do it in another?—Well, he can try it anyway.

32703. Chairman.—But except that the holding should be of reasonable size has size got anything to do with the question—is it not the case really that all this is due to the circumstance that knowledge and capital are in the hands of the big men?—Oh, certainly.

32704. And if you give the small man as much knowledge and capital as the big man has got he can succeed just as well as the big man?—He can, and as a matter of fact, do the work himself better perhaps. It is usual to stall-feed a number of cattle in one house. Two men can feed twenty or thirty stall-fed cattle in one house, while it would take the same men to feed half the number.

32705. But that would not make a difference?—No.

32706. Therefore when Sir John says that you are comparing the Scotch big man with the Irish small man that is hardly a fair statement, because, as a matter of fact the reason is that the big Scotchman now has the knowledge and has the capital and the Irish small man has not, and thus beats the Irish small man, not because his holding is small, but because he has not the knowledge and the capital that the big Scotchman has?—That is the chief cause of it.

32707. Sir Francis Mowatt.—Is not the fattening done partly by small holders in England?—I do not know anything of England beyond the instances I gave you.

32708. But some of those small men in England fatten for the butcher, and then it is not fair to say that in England the comparison is with large holders?—I do not know much about England.

32709. Sir John Colomb.—Or Scotland?—Or Scotland.

32710. Chairman.—Now, to go back. If what you tell us is true, why, with a greater increase of agricultural knowledge and capital, should abolishing the large grazier industry be disastrous to the country?—For the reason I told you, that you will not get men to go on fattening cattle so long as you make profit out of younger cattle. Some men must grow them. You cannot have old fat cattle without growing young ones. Some men must grow the young ones or we cannot have the old ones.

32711. But that is only under present conditions. You are speaking now of present conditions. You say that if farmers in Ireland continue selling their cattle at a year old there must be necessarily somebody left to buy them?—There must be.

32712. But there is no reason why they should sell them at a year old?—You should give them fifty acres each or they will never hold them on to fatten. They will sell young cattle, because it pays them better to sell them young.

32713. Why do you say fifty?—Because with thirty acres there is no chance of doing it. They will keep on to the young cattle. They can feed three or four young cattle for a couple of old ones.

32714. But you have just told us that it would be better to keep them?—Oh, if they had the means and the capital.

32715. And is there any reason why thirty acres would not suffice?—Well, the occupier of a thirty-acre farm will sell the young cattle and they will pay him better.

32716. Most Rev. Dr. O'Donnell.—What class of land?—Oh, I mean County Leitrim all through. I would say that any man in Leitrim ought to have twenty to twenty-five acres to live comfortably on it.

32717. You said you would not regard stall-feeding as profitable with a smaller acreage than fifty acres?—Yes.

32718. And I want to know what class of land?—Good land.

32719. But the quality of the land?—I should say 30*s*. an acre at the least—good land like that.

32720. Chairman.—Now, on another point, did you ever consider from where the chief competition with the Irish cattle trade comes?—I think they have done their worst.

32721. You think the competition will be no keener?—No. I do not know. Cattle are dearer than this time twelve months. I think the foreigner has done his best.

32722. We have been told that the dead meat trade is the thing of the future. Do you agree with that?—I do not know. From the shipments coming in this year, both of dead and live meat, I think they have done their worst.

Apr. 25, 1907.

Mr. Wilton-Vaugh.

32723. We have been told that the Argentine people have so improved their herds for the purposes of the dead meat trade that the meat is of such a quality that it is that meat that will, in the future, seriously compete with the Irish cattle and that consequently, unless it is possible to fatten Irish cattle quicker than they are fattened now, unless the rearing and fattening be more simultaneous than it is now, the Argentine dead meat will seriously interfere with the prosperity of the Irish cattle trade?—Well, I do not know, my lord, what will happen in the future, but I am only speaking of what is happening at present, and I believe they have done their best and their worst against us, and that we will not see cattle cheaper, and that is the experience of all shipping men and dealing men whom I meet every day of the year.

32724. Would you say that Ireland would do better to go on as she is doing now?—Rearing young cattle?

32725. Would you say it is better for Ireland to go on rearing fat cattle with a view to producing meat or to go in more largely for dairying?—But dairying and rearing young cattle go together. They go together, and I say that is the best thing for small farmers in Ireland.

32726. That is to say the selling of cows?—No; rearing calves and making butter. Those two go together and I say that is the best thing for any small farmer to take to, and I would say to him, "Grow green crops and feed your young cattle better and prepare them for the English and Scotch markets as quickly as you can."

32727. But look to the dairying, look to the sale of the milk and the making of butter?—But he rears a calf along with that.

32728. He does the two things?—He does the two things—makes the butter and rears the calf.

32729. Sir JOHN COLOMB.—And it is essential to the production of butter that there should be some tillage?—Certainly.

32730. And by that you increase your output of butter and increase the value of your cattle?—Certainly, tillage is essential. I would like to see every farmer in Leitrim with half an acre of potatoes; half an acre of root crops, and an acre of oats.

32731. And does the enhancing of the value of the land result from the effects of the two combined?—Of course it does.

32732. And is not that a question of manure?—No; what we want in Leitrim above all things is drainage. Drain our lands first, and then insist upon cropping them, and then you will have a good crop to feed your cattle with and put it into your young cattle, and sell your young cattle, and that is the way to make money in Leitrim.

32733. Is it not the case that whatever you do on a farm of a certain size and quality there is a limit to the number of cattle you can properly rear or keep on it?—Oh, of course there is.

32734. What you mean to say is, that the real business for the small holders of Ireland is dairying and the rearing of young cattle, feeding them well in their youth and selling them early?—Certainly.

32735. And, therefore, there must be milk for the young calves?—There must be.

32736. CHAIRMAN.—For dairying purposes you say a certain amount of tillage is essential?—Certainly, my lord.

32737. Do you think it would be better carried on by small holders or large ones?—By small holders, as small holders would do work themselves.

32738. Is the tendency of grass ranches to diminish tillage?—Certainly.

32739. In order to increase tillage would you like to see the grass ranches broken up?—Certainly, I should like to see a man with a small holding do more tillage. They do not do half enough tillage.

32740. And you believe in mixed farming?—I do.

32741. And you think it would be better to encourage a system of small holdings than of larger ones?—Yes.

32742. And you say it is necessary that there should be milk for the calves. If the small holders of Connaught were to breed calves largely and if they found that the system was not so largely adopted in other parts of Ireland, would not the buyers go to Connaught?—You would find them all coming down to Connaught to buy those stores.

32743. Then how would you like this, that Connaught should go in largely for a system of farming on small holdings and that for the present, at any rate, the rest of Ireland should continue to buy and forward those stores?—That is what I think would be the best thing for Connaught.

32744. Mr. SUTHERLAND.—So you would bring England and Scotland to Ireland?—I would have Connaught the breeding ground for cattle and children.

32745. CHAIRMAN.—Then so long as there is a market in the other provinces of Ireland, so long as there are grazing tracts there, would you be prepared to see Connaught deprived of the present grass holdings?—It would be all the better if you did not go outside of Connaught for it, but if it got all over Ireland I say it would be a great mistake.

32746. The prospect for small holdings is principally in Connaught?—Yes, principally in Connaught. The only thing I would urge upon this Commission if you want to benefit us in Leitrim is to drain our lands for us. That is what we want above all things.

32747. Are you prepared to maintain the drains if made?—That is a question for the occupiers. Some of them will and some of them will not.

32748. How do you propose it should be done?—It is the occupier that must do it.

32749. But supposing he will not do it?—I do not know what would happen then. What I would like to see would be this, that the Congested Districts Board should appoint a man specially for that purpose, to go round these poor farms directing the tenants where the drains should be and see that they were properly made and give them what I used to give them in the old times before there was any Land Act, what was given by the large owners of property, and that is sixpence a perch for making those drains, and seeing they were properly done.

32750. That is small drains?—Small or large. There is not a spot in Ireland or Connaught so full of rushes as the County of Leitrim. The half of it is covered with rushes, and I want to get this land drained, and the people will not do it unless there is some incentive or something to encourage them to do it.

32751. In connection with small drains you must also have a large arterial drainage?—That is for the whole country, but this is the County of Leitrim, and there are very few parts that would want large arterial drainage like that.

32752. But if you drained the land better than now would not the effect of that be to throw a good deal more water down on the low-lying grounds?—No, it would not. There are main drains to carry this off, and it does not do any harm of that sort. And what I want is to drain the small farms, and that should be encouraged in the way I suggest, to give them a small sum for doing it and to see that it is properly done. I believe it would cause a very great change in the soil of this county in a very short time.

32753. Sir JOHN COLOMB.—And are you of opinion that compulsion should be applied to tenant farmers as well as to everyone else?—I do not think there is any necessity for compulsion at all.

32754. I understand that the valuation of your farm is higher than the rent?—Just £100 over the rent; about £317.

32755. CHAIRMAN.—Can you say how much the Estates Commissioners paid for the King Harman estate?—I cannot tell you.

Rev JAMES MANNING examined.

Rev. James Manning.

32756. CHAIRMAN.—I see in the precis that you have handed in the first paragraph consists of statistics of congested areas, I think there I need not trouble you with very much?—It is only to my own parish, my lord, that I intended these things to refer.

32757. Is your own parish scheduled or not?—The parish is partly scheduled. My own parish is called Drumshambo. It is really a part of Kiltoghert Parish, but we call it, for our own purposes, Drumshambo. There are twenty-three scheduled townlands in that parish, containing 166 families, and there are thirty-three non-scheduled townlands, containing 187 families with a population of 990 persons. The little town of Drumshambo contains ninety-five families, with a

total population of 553, according to the Census of 1891. My reason for giving these few figures is this, that I do not see any reason why the thirty-three non-scheduled townlands in this parish are not scheduled. The little town of Drumshambo being in the electoral division of Drumshambo, and close to the electoral division of Leitrim, I think has at present something to do with the non-scheduling of those thirty-three townlands. It naturally raises their rateable valuation. I think the scheduled area should be extended. As far as I know the district, and I know it pretty well, there is no reason to be found in the quality of the majority of holdings at all events, or in the condition of the occupiers of the majority of those holdings in those two divisions of Leitrim and Drumshambo for excluding them from the scheduled area. The majority of the farms here are uneconomic according to the definition laid down by the Congested Districts Board of what constitutes an economic holding, but there is not one of them economic if we apply to them the test laid down by the Agricultural Board. In every one of these townlands the people are just as poor, if not poorer even than in the scheduled districts, and it would be a great benefit to the farmers if these divisions were included in the scheduled area and personally I do not see any reason why the whole County of Leitrim is not scheduled.

32758. Most Rev. Dr. O'Donnell.—I find that there are, apart from those 95 families, 74 under £4 valuation, and 185 additional under £10. That goes to show that in these two electoral divisions there is a large proportion of small holdings?—Yes. That bears my statement out that they ought to be scheduled as congested —those two electoral didvisions of Drumshambo and Leitrim. In this parish of Drumshambo there has been only one small estate sold or purchased under the Act of 1903. The price given for it was twenty-one and a half years' purchase on second term rents, or their equivalent. The greater portion of the scheduled area in this parish was purchased under Acts previous to 1903, and the price in all cases was under eighteen years' purchase. The last sale that took place under Acts previous to 1903 took place the year I happened to be appointed parish priest, 1902, and the price was seventeen and a half years' purchase. There were a number of them first term rents, but they were made equivalent to second term rents.

32759. Sir Francis Mowatt.—How do you mean that they were made equivalent to them?—Reduced by about 6*s*. 8*d*. in the pound. The first term rents or what we looked upon as first term rents at that time were reduced by about 6*s*. 8*d*. in the pound, and the sale was effected on that basis. Negotiations were entered into recently relative to the purchase of an estate here, partly lying in the scheduled and partly in the non-scheduled area. Some of the tenants signed for purchase at twenty-three years' purchase of second term rents, and some of them did not sign. A still greater number of them refused to give more than twenty-two and a quarter years' purchase of second term rents. I was made the instrument between the seller and the purchasers in those negotiations. I think those negotiations are likely to fall through. I wish to point out, my lord, the state of affairs in this parish of Drumshambo or Murhaun, and to contrast the present condition of those tenants who have purchased their holdings with the condition of those who have not, and I wish to say that both those who have purchased and those who have not are, in the majority, poor, and very poor. It could scarcely be otherwise, except by a miracle, the land is so wretchedly bad. It is poor and miserable, and cold, and shallow, and retentive. I heard the land described here as having nine inches of soil upon it. I know that in the vast majority of farms on the mountain sides of Drumshambo there are—and I know this from my own personal knowledge—not six inches, not four and a half inches. I know that to be the fact, not from what I have heard, but because I have seen it.

32760. Then you come to the rock?—No; it is a sort of blue clay or something like brick clay.

32761. Sir John Colomb.—What they call boulder clay?—No; bluish clay, something of a cross of yellow and blue, and it is impossible to drain it except you bring the drains to the surface, or leave them open. To drain them with stones is useless.

32762. Water could not get through the blue clay?—No. If you close the drain with blue clay it becomes, in time, as hard as a slate. That may be a general description of the whole of the land that is called arable or level land in the parish of Drumshambo. There are some pieces of land down in the lower portions of it where there were only bogs long ago, I am given to understand. It is a sort of black clay that is in it. There are small portions of the rest of the parish that are something better. The quality of the land there is something better, but these are small patches.

32763. Mr. Kavanagh.—Would you say that drainage was almost impossible?—Except to leave the drains open it is quite impossible, and it is useless ultimately except you leave the drains open or fill them with stones and bring the stones to the surface.

32764. But that would not be possible in tillage land?—Oh, it is quite possible, and it is done; why not?

32765. To bring the stones to the surface?—Yes, and leave the drains uncovered.

32766. How far apart?—This varies in accordance with the sort of field the farmers have. It may have a slope on it, or it may slope in towards the middle. And some smaller ones branch off from it and they leave the main one open in a great many cases, or in a great many cases they leave them all open. And surface water will not permeate through the sub-soil.

32767. Mr. Sutherland.—Is that land up on the mountain side?—It is. The peculiarity of the county is that the further you go up the hill the wetter it becomes, and that is all over the country. There are few level spots all along there. It is a rocky mountainy district.

32768. Is there turf?—We have no turf in the parish. We have not two acres of turf-bank, where turf can be cut with a slane, in the whole parish.

32769. Sir John Colomb.—In the whole parish?—In the whole parish of seven miles.

32770. What do the people do for fuel?—They burn culm from the Arigna mines, beyond the Shannon. They bring it over from the mines and they mix it with the yellow or blue clay and make it into lumps, and burn those lumps, and make a very good fire out of it, and it is cheap. I think it is now, at this season. In the winter season of the year it is 3*d*. a cwt. I think now it is 2*d*. a cwt.

32771. Do you consider that the people that use this mixture that you describe are fairly well off for fuel?—They are fairly well off.

32772. As compared with the turf districts, do you think they are better or worse off than people in similarly situated districts that have turf?—They are worse off than those living in districts where turf can be procured, because they cannot take in a supply of this culm. They have to go in all classes of weather three, and four, and five, and six, and seven miles with a little donkey cart; and in fact I see them bringing it in in what are known in mountain districts as creels, on the side of an ass. Well, along with this state of affairs I say it is next to impossible to be in any other state than poor, because along with the nature of the land it had to bear a very heavy rent. The people there are, I must say, a most industrious people. I never came across nicer plots of soil for potato-growing than I see on these very small farms in the parish of Drumshambo. They have to be. Often those who have bought at seventeen or eighteen years' purchase find it difficult to make ends meet. In fact they cannot, from the produce of their miserable farms, in some cases which came under my own notice. I have had people come to me more than once to ask me for a loan to enable them to pay those instalments.

32773. Chairman.—After they had purchased?—Yes; or to write to the Commissioners to ask them for further time. But with regard to those who have not yet purchased, whether it be in the scheduled or non-scheduled area of Drumshambo, their state is just a degree or two removed from legalised slavery. They are very miserable and poor.

32774. Have you got any instances in your mind?—I have, my lord.

32775. Can you tell the Commission what the sums were?—The last case that came under my notice was 27*s*.

32776. Was that a half-yearly instalment?—Half-yearly.

32777. Sir Francis Mowatt.—The whole instalment was 54*s*.?—The half-yearly instalment was 27*s*.

Apr. 25, 1907.

Rev. James Manning.

32778. CHAIRMAN.—What did that man tell you that he could pay?—I knew the man, and his family, and his farm, and I had various opportunities of knowing his position in life, and I knew myself he could pay nothing. I knew him to be an industrious man. He had a big family of small children, none of them away from him, none of them working. His wife died a short while before that, and an old sister of his was in the house, and a few months after those events he died himself, leaving his eldest son to come to me for a loan of 27*s.*

32779. Mr. KAVANAGH.—How old is the son?—About eighteen or nineteen years of age.

32780. CHAIRMAN.—Was that rather an exceptional case?—It is. All I want to make out of it is this, that there are cases where people have purchased land and cannot pay the instalments.

32781. Yes, but in this case the father died?—Well, I know another case in the same townland, where none of those misfortunes befell the family. I know a young man who has the care of his old father and mother. I know him to be an industrious young fellow, a hard-working young man, and he came to me on two occasions to ask me to write to the Commissioners for time for him, or to give him the wherewith to pay.

32782. And what was it?—As far as I recollect, £2 7*s.*, the half-year's instalment.

32783. And what could he pay?—I didn't ask him what he could pay. He asked me for assistance towards the £2 7*s.*, and for a certain amount to make up the deficit.

32784. But what was the amount he wanted to make it up?—27*s.*

32785. And apparently he could pay £1?—Yes.

32786. Most Rev. Dr. O'DONNELL.—He might have got that £1 from someone else?—I was under the impression he had.

32787. How do those people with small holdings get on? Have they any source of income except the farms?—None whatever, except the farms, unless from America.

32788. Do the sons go to America?—Yes, and they go in large numbers. I intend touching on that by-and-by.

32789. CHAIRMAN.—And you say that in a case like that, although the tenant-purchaser is perfectly industrious, through no fault of his own it is quite impossible for him to meet the instalments of his annuity?—I give you two cases, in this same townland.

32790. In your opinion the land is so poor that it does not pay any rent at all?—It is so poor that if a person was condemned to live on it during his natural life, a greater punishment could not be inflicted on him.

32791. The point is that the land is so poor that it is really incapable of returning the instalment?—Well, in the circumstances, at all events, of those two cases that I refer to, my experience showed that they were not able to pay. I am not able to trace the matter to a cause further than the fact that they came to me and asked me for this money, and that I knew the circumstances in which they lived.

32792. Is it your opinion that these are holdings which are such bad land that they really cannot pay anything like the instalments?—I believe there have been holdings in Drumshambo purchased, which are incapable of producing the instalments.

32793. Is it a question of a shilling or a pound?—I believe it is a question of a pound.

32794. That the holding is really incapable of producing more than a pound?—I would not like to define it by a pound. I would not like to define it at all as a matter of fact.

32795. On a holding of that kind it is not really very much matter, so far as the tenant is concerned, whether the instalment is 5*s.* or 6*s.* more?—Well, my own opinion would be that it ought not to make much matter, but the people will value it. It is a great deal of matter for them.

32796. Of course everybody would want to get it 5*s.* less, but does the question of the difference of 5*s.* more or less in the instalment mean difference between success and failure?—It would not mean that but it means that there are a great many people who are not able to make that amount on the holding, and who, in many cases, depend upon help from other countries.

32797. Does the success or failure of the tenant depend upon the difference of a few shillings in the instalment in each case?—It is a difficult question to answer.

32798. I am sure you can answer it?—Oh, as I said before, I do not think the difference of a few shillings would make much difference one way or the other.

32799. But the rent has to be looked for from sources other than the land?—Quite true.

32800. And, therefore, whether it is sold at eighteen or twenty years' purchase it does not alter the fact of the power of the farmer to pay?—Quite true, because they are not taking, round here at all events, the whole of the rent from the land.

32801. The whole question of sale would possibly break down if it was made dependent on the number of years' purchase. Is it worth while risking a break-down of the negotiations altogether?—I think it would depend altogether on the amount.

32802. Is it a question of three or four years' purchase?—It makes a great difference to the people.

32803. Five or six years?—In the matter of purchase it would make a difference to the people.

32804. Do you mean to tell the Commission that five or six years' difference in the annuity is a great difference in cases like that?—As a matter of fact it will make a difference in the matter of negotiations, as I know.

32805. But as to the success or failure of the purchaser?—Well, I think it would not militate very much against the future prospects of the tenant.

32805A. Most Rev. Dr. O'DONNELL.—You are dealing with a poor population?—Quite true, my lord.

32806. Would these people have to look very carefully round to other sources of income in order to meet their annuities at all times?—Yes.

32807. It is a great struggle, at best, to get from America and other sources the amount to meet the annuity?—That is quite true.

32808. From year to year?—Yes.

32809. And in these circumstances a deficiency of 5*s.* or 6*s.* is not to be despised?—Oh, not at all.

32810. CHAIRMAN.—That is not quite the point, and I do not mean to say that 5*s.* is not worth having; but which do you say is best, that the tenant should possibly have a chance of purchasing his holding by agreeing to pay 5*s.* or 6*s.* more or that he should not buy at all?—I would advise him to buy.

32811. It is better for him to purchase?—For the matter of 5*s.* or 6*s.* difference I would advise him to buy it.

32812. Sir JOHN COLOMB.—Will you revert for a moment to those two poor cases that you mentioned. They were purchasing annuitants not under the Act of 1903, but under the previous Act?—Yes.

32813. And therefore their holdings had been inspected?—Yes.

32814. As a matter of fact you know the holdings had been inspected before the money was advanced. Now, can you tell me what was the Government valuation of these holdings?—I cannot tell you, because I took no note whatever of their valuation.

32815. And these were both cases where there were special circumstances. In one case there were an old father and mother, and in the other case the farmer died?—Yes.

32816. Those cases were due to exceptional causes?—Yes.

32817 Most Rev. Dr. O'DONNELL—In the case of purchase by these small men where the instalment is £2 a year 5*s.* would be of importance?—Yes.

32818. Supposing the small occupier was under the impression that the right price was not £2 but £1 15*s.*, and that he could reduce it to £1 15*s.*, why should not he hold out for the eighth as much as if he were a bigger man?—Certainly.

32819. And while it must be admitted that it is a small amount in itself, is there any reason why he should not look to the difference in his interest and try to make a bargain just the same as if he were a big man?—Every reason why he should look to it.

32820. CHAIRMAN.—But the equity of the bargain is the thing. Take the case that the landlord before consenting to sell his property says, "In my view an equitable bargain is to sell at a price which will return me my net income." Are you of opinion that it would be an equitable bargain to purchase land, if necessary by compulsion, at a price which would leave that landlord poorer than he was before?—No.

32821. Therefore an equitable bargain is a sum of money which, invested at, say, 3½ per cent., would leave the landlord his net income?—Yes.

32822. That is the equitable bargain, from the landlord's point of view. Now, come to the tenant. The tenant farmer's purchase on these terms made it

necessary for him to pay, say, £2 a year instalment. Would it be equitable for the tenant to say "No, I insist on paying on terms which would mean that I should pay £1 15*s.* a year"?—Well, it is a matter of bargain.

32823. But an equitable bargain means the fair price that the tenant has got to pay. If it is equitable that the landlord should get his net income, and neither more nor less than his net income it means that the tenant has got to pay him a sum of money which will return that net income?—Certainly.

32824. If it can be shown in plain figures that the instalment of £2 a year will return that net income to the landlord, is not that the equitable price for the tenant to pay?—I believe it is.

32825. Then is it worth while to do an injustice to the landlord and take this property from him at a sum of money which will not give him that net income, merely for the sake of saving 5*s.* a year?—Well, if it is necessary for the sake of public good, and for the relief of congestion, to have compulsion let it be compulsion all round. I do not believe in compulsion myself if it could be helped, but I intended referring to it in my evidence.

32826. Before you leave that point, you say it is equitable for the tenant to fix what he considers is a fair annuity on the holding, that is to say that you would like that he should be in a position to say, "I consider £1 15*s.*, and not £2, as the annuity which my holding must bear." That must involve an injustice to the landlord; at least when I say injustice it means that he is made to accept a sum of money which would leave him in a worse position than he was before?—That, I suppose, is compulsion.

32827. It is compulsion?—Well, it assumes compulsion. I was thinking of voluntary negotiations.

32828. But voluntary sale is a totally different thing, unless you bring in circumstances into voluntary sale, which would make it compulsion?—I would not go for compulsion unless it could not be helped, and if there was to be compulsion I would say compulsion all round.

32829. There are many sales in Ireland which are voluntary sales, but which the circumstances of the country remove from a purely voluntary basis, which alter it from a perfectly free negotiation. Let us take the case of compulsion. I am trying to arrive at an equitable arrangement. Would you say that the tenant ought to have the right of determining himself what is the annuity which his holding ought to carry?—I would not.

32830. You would not?—No.

32831. What ought to be the basis on which the calculation should be arrived at? Is it to be the sum of money which, when invested, would give the landlord his net income?—Well, I would like to see the landlord getting his net income.

32832. But you do not think that under either voluntary or compulsory sale it is equitable to ask or force the landlord to accept a sum of money which would leave him in a worse position?—No; I do not go in for that.

32833. Most Rev. Dr. O'Donnell.—Let us have your view. We have specially before our minds the poor man. If £1 15*s.* be the equitable instalment you would not, simply because it is only a difference of 5*s.*, like the instalment to be £2?—No.

32834. Take the case of a man whose instalment is £14. In that case you would not like the instalment to go up to £16?—No.

32835. If the equitable instalment is £14, you would not like it to go up to £16?—Certainly not.

32836. My point is that you would be as particular in the case of the small man to prevent his getting an increase of the instalment as you would be in the case of the bigger man to prevent his getting a proportionately big increase of the instalment?—Yes, the case of the small man is proportionately the same as the case of the big man.

32837. You do not think that simply because he is a small man a few shillings can be sacrificed?—Oh, not at all.

32838. Chairman.—Then, of course, if the instalment is equitable at £1 15*s.* it would be equitable to pay it. But we are assuming that the equitable basis is £2 and not £1 15*s.* If it is £1 15*s.* it would not be equitable to ask the tenant to pay £2, but in any case the equitable basis is net income?—Yes.

32839. And it would not be equitable on the tenant's part to pay him less than that, and it would not be equitable on the landlord's part to demand a sum greater?—Yes.

32840. Sir John Colomb.—You are not in favour of compulsion, though you recognise or are prepared to recognise that in some extreme cases it might have to be exercised?—Yes.

32841. Is that your view?—Yes.

32842. And you are decided in your opinion on this, that if you are to have compulsion you would have it all round, whether in the case of the landlord, owner, tenant, farmer, shopkeeper, or anybody else?—Well, in a great deal of the evidence before the Commission I saw this point dealt with extensively by a great number of the gentlemen who gave their evidence, and I do not like to enter upon it.

32843. Most Rev. Dr. O'Donnell.—I will not press you, but I do not suppose you would have any objection to answer this general question. If, in order to carry out a State policy necessary for the interests of the people of the country, any loss is to occur, no particular class or individual should bear that loss, but it is the State that should bear it in carrying out that policy?—I would think so.

32844. Mr. Sutherland.—Now, you spoke about drawing a contrast between those who have purchased and those who have not purchased. Do you wish to draw a contrast between them?—Yes.

32845. And what is the result of it?—The result is this, that in the case of those who have purchased their houses and farms are much better kept and there seems to be more energy thrown by the occupiers into the working of their little farms. They seem to take a greater interest, and they certainly seem to feel happier and more contented. That is the only contrast I wanted to draw, sir.

32846. Sir Francis Mowatt.—Some asked you for assitance to help them. Did that continue from half-year to half-year, or was it an unfortunate half-year in which they fell short?—It occurred only once. As far as I know myself, personally, it occurred only once.

32847. It was accidental?—It was accidental. In one case on account of the deaths that took place in the family. I would not say it was accidental in the other. I think that rent could not be produced from the land, and some help came from America.

32848. But it has not been repeated?—But the help has come from America since. Now, I wish to refer to remedies for congestion. Well, I should say one of the remedial measures, as far as I know, for congestion is not emigration in shiploads under the care of their priests, as one of the eloquent witnesses before the Commission had the kindness to suggest. Nor would I say under the care of any other body of men in shiploads, is emigration the means, or one of the means, for the relief of congestion; for this reason, that this means has been on its trial since 1841 in this country. You will excuse me for giving a few figures on this point. In that year, 1841, the population of Ireland was 8,175,124. In 1901 the population was only 4,458,775. Since that a further decrease has taken place in the country, as the estimated population on June 30th, 1906, was about 4,387,887. Here we are with our population diminished by 50 per cent. in sixty years, and we are told that the only remedy for congestion in a few counties is emigration of the people in shiploads. In reference to this I wish merely to say that I think the wrong word has been selected to express, as grammarians call it, the objective genitive depending on the noun emigration. The word should be "bullocks" and not "people." Emigration of bullocks in shiploads if you wish, and I don't care who takes care of them. The migration of the surplus population of the congested districts to the bullock walks, would, as far as I can see, be the only lasting remedy for the relief of congestion. But I come to migration, and I ask the question How? All I wish to say upon that point is this: The Congested Districts Board should be continued. The people with whom I am acquainted here in the county have the greatest confidence in it. They will tell you, in speaking of the Congested Districts Board, that it is in possession of the congested districts now for about sixteen years, and that it should be left in undisturbed possession of them. They will tell you that it is the only Board out of all we have engaged in the mis-

Apr. 25, 1907.

Rev. James Manning.

management of the affairs of this country (and their number is considerable) that has done any good for the agricultural classes; that Connaught should be entirely handed over to the Board as the chief seat of its operations, but that its functions ought not to be restricted to Connaught. I consulted the people of my parish in various places for the last three or four weeks and the week before last I had a meeting representing the people of it, and I got this idea from them, that wherever congestion prevails, there the Board ought to have a free hand. Its facilities for purchase and improvement ought to be increased by Act of Parliament, and it should have full power and funds sufficient to purchase the scheduled areas and areas adjoining, or areas wherever they can, for the purpose of migration. Additional land must be got by the Board—must, as a matter of course, be got by the Board—for the relief of congestion. I see there is a new Land Bill passing through the House of Commons which if it becomes law will confer compulsory powers on the Congested Districts Board in certain cases to enable them to become possessed of lands for the relief of congestion. The principle underlying the Act of 1903 is, I think, the land for the people. Well, under that beneficent measure the people have not yet got the land. I have not heard or read of many cases of eviction of bullocks. To consult my own personal feelings I would much prefer to see voluntary sales and voluntary purchase, but if this amicable state of affairs between landlord and tenant cannot be arrived at on equitable terms then, I think, our only resource is compulsion on similar terms. We have been so used to coercion in this country that the people will not wonder much at this new attempt. The last point that I wish to give evidence on, my lord, is the working of the Board through Parish Committees. I have been working on one of them for the last three years, and from all I have seen done in my own parish through the Parish Committees I can safely assert that the Board is doing work of incalculable advantage to the smaller farmers by means of their Parochial Committee scheme. Now, there is a point I wish to refer to specially; it is that the Board should devote more money to the drainage. I heard a witness who spoke of drainage to-day. He seemed to refer to the drainage of lands in preparation for crops. I think the first thing that ought to be done is to drain the main rivers, at least in the district that I am acquainted with, running on to the Shannon. They are mountain rivers running down from Slieve-an-ierin. They overflow their banks periodically. These are the rivers that I refer to specially. The repair or drainage of one of them was to have been done by the Congested Districts Board in my predecessor's time, six or seven years ago. The Board sent some inspectors down, but it has not yet been drained. I saw here, a few years ago, in the month of September, the people whose land runs along by this main drain lose every single stack or cock of hay they had. They were all carried down to the lake, and they have not been seen since.

32849. Sir JOHN COLOMB.—How do you describe the drain?—I would call it a main drain to the smaller rivers running into the Shannon.

32850. Most Rev. Dr. O'DONNELL.—Arterial drainage?—I think arterial drainage would refer to larger rivers, my lord, but this would be a small river; I would call it a main drain, four or five yards in width.

32851 Sir JOHN COLOMB.—Was it made by nature or by man?—Oh, I think by man, in years gone by; and originally nature must have formed a watercourse there.

32852. Most Rev. Dr. O'DONNELL —And to prevent flooding you want to lower its bed?—Yes, for the present.

32853. Mr. SUTHERLAND (*referring to map*).—Is this where the river is?—The particular one I refer to flows into Lough Allen at that particular point.

32854. Does it flow down a steep mountain?—Oh, yes.

32855. And where does the obstruction take place?—In the lower land on their way to the smaller lakes that are about a mile from the place. They run through the lakes on the way from the mountains on to the Shannon. It is this river that I referred to particularly just now. There are two small lakes called Rosconnish.

32856. Sir JOHN COLOMB.—Have you been led to believe by hearing your older parishioners talk that it is worse now than it was some years ago—have you any reason to believe from talking to the older men in your parish that the people are more apt to be flooded now than they were years ago?—Oh, yes, to be sure.

32857. And have you got any reason to believe that that is due to not attending to the maintenance of this drain and keeping it clean, and that now they are suffering from the evil result?—The drain runs, I think, between two properties, and fifty or sixty years ago the landlords used to look after this drain; but nothing has been done with it for, I should think, the last thirty or forty years, and it seems to be clogged completely.

32858. As I understand you, it was all right up to some long time ago, and the landlords having formerly made or improved that drain, and now nothing has been done to maintain it?—Nothing has been done.

32859. It has gone back?—Oh, yes.

32860. And does not fulfil the purpose for which it was made?—No.

32861. But previous to the Act of 1881 was it the custom of the landlords to make the tenants look after each of their bits of the drain and to keep it clean?—I could not tell you.

32862. But this remains, that to the best of your belief the drain is less effective now than it was five years ago when you came first. And do the tenants among themselves try to clean this drain or keep it?—No. They constantly kept the idea before my mind that I was to apply to the Board for help.

32863. Now give me your view of this. It is a necessary work to put it in thorough order now?—Yes.

32864. Now supposing the Congested Districts Board put that drain in perfect order do you think or believe that the Congested Districts Board should have some power as regards making those tenants concerned attend to the drain and keep it in proper order?—I would be very glad to see the Board have that power.

32865. Most Rev. Dr. O'DONNELL.—Would it make it easier for the tenants whose lands adjoin the river to drain their farms, to put in farm drains, if the river were deeper and wider?—Yes, my lord.

32866. What you said about the character of the soil seems to show that farm drainage is difficult in this part of the country?—Very difficult.

32867. But something could be done?—Something could be done, but I do not believe myself that much could be done by closed drains.

32868. Owing to the character of the soil?—Owing to the retentive nature of the sub-soil.

32869. But if the river were deepened and widened then by means of open drains something might be done?—A good deal could be done. All that hay would have been saved had that river been drained.

32870. What do you recollect was the reply you got from the Congested Districts Board?—I wish to say that I had no communication with the Board in relation to the river. It was my predecessor, but I have had several communications from the Board on other works in the parish, one of them being a wooden bridge over the same river to accommodate those poor men who have no earthly means otherwise of getting into their homes by daylight or dark except by going round about two or three miles away from their homes altogether to cross this river. We have got, thanks to the Congested Districts Board, through our Parish Committee, a very substantial bridge built on a more elevated level over this same river, which accommodates a number of people all over that river, and enables them to go in or out.

32871. I gather from you that you would desire the Board to have sufficient powers for any such drainage?—I would, my lord, be very glad.

32872. But probably it has come under your notice that it would be difficult for them to conduct large drainage operations?—I know it would be difficult for them to conduct many an operation they were entitled to conduct, even in my own neighbourhood.

32873. About the drainage: you know the County Leitrim pretty well?—I know that part of it, my lord.

32874. Do you think river drainage would be necessary at other points of the locality you now speak of?—Well, I know that some river drainage is absolutely necessary to the non-scheduled part of my parish—absolutely necessary. Another small drain that is there, about 4½ or 5 feet in width, is destroying every year the crops along its way.

32875. You describe the drainage as difficult?—I do.

32876. The character of the soil over large tracts of the County Leitrim of that description would explain to a large extent how it is that the

occupiers do not drain or how it is that the last witness made the statement which he made about drainage in Leitrim?—Yes, but I do not believe the whole of it, because I know that it is impossible to drain the lands that I am acquainted with, if you close the drains. Impossible, except by bringing the stones in the drains to the surface, and keeping them exposed.

32877. Do you not think that the difficulty of drainage is an explanation of what was referred to by the last witness?—I believe it does altogether explain it.

32878. Sir JOHN COLOMB.—About that blue clay which you described, I put this question—Is there any brick-making or tile-making carried on or any reason to believe that bricks or tiles were ever made in this district from the clay?—Yes; they were made at the northern end of Lough Allen, but that is a long way off—ten miles distant. There was a brick and tile factory there some eighteen years ago. The bricks made by that factory were brought by a small steamer, and there was a market for them, but that ceased.

32879. CHAIRMAN.—What was the reason of its ceasing?—I do not know, my lord, what was the reason. I am only giving you the evidence. Although the Congested Districts Board have handed over their agricultural and technical operations to the Agricultural Board, still I would like very much to bring before the Commission the necessity of aiding the farmers in the congested districts towards the spraying of potatoes. I believe in spraying, because I have seen the benefit of spraying proved conclusively. It would be a very good thing if spraying machines could be got—well, I won't say on what system, but if some aid could be got from the Congested Districts Board towards the spraying of potatoes and the planting of trees. Our country is quite bare, and I believe there would not be a more beautiful county in all Ireland if it were planted than the County Leitrim. There are no trees for eight miles from this, with the exception of one plantation, from Carrick-on-Shannon to Drumshambo. The country sides are bare and bleak and cold-looking.

32880. Sir JOHN COLOMB.—Is it for ornamentation or shelter you want the trees?—For shelter and to improve the land. I believe it would improve the land. And the last point that I wish to bring before the Commission is that I would like very much to see prizes given to induce the smaller farmers in the district to take more food-stuffs for themselves and their cattle from their farms. The last witness referred to that, and I thoroughly agree with every word he said on that point. It would be a great benefit to the smaller farmers if they took out from their farms, especially during the winter season and the spring season, more feeding stuffs for their cattle than they do.

32881. Mr. SUTHERLAND.—They do to a small extent. I saw cart-loads of them in the town this morning?—It is not done to a large extent, and I would like prizes to induce the farmers in the congested districts here to take more food-stuffs from their farms for themselves and their cattle. And they should have more corn mills in this part of Leitrim. I have not seen a corn mill working in the district since I came to Drumshambo, five years ago. I saw one working over near Carrigallen two or three months ago.

32882. Mr. KAVANAGH.—Do you think the agricultural education of the people needs to be attended to?—I do.

32883. Do you see much evidence of it now—is your County Committee sending out instructors?—It is.

32884. Do you believe that it is doing good work?—I believe it is doing a great deal of good.

32885. Especially where you are going to carry out migration, is not it of great importance?—Yes.

32886. To educate the people to an advanced state of agriculture?—Quite right.

32887. But you are satisfied with what is going on at present?—I am.

32888. Have you any knowledge of it in the congested districts?—Not of my own knowledge since I came to Drumshambo five years ago.

32889. The people are benefiting by it?—I think they are benefiting very much by it, but much more by the agricultural education than by the technical.

Mr. BERNARD FOX examined.

32890. CHAIRMAN.—You are a member of the Carrick-on-Shannon Rural District Council?—A junior member. I have been deputed with Mr. Flynn to give evidence here on their behalf.

32891. And what evidence do you wish to give?—I think I can say as regards our district that we are most anxious to get rid of the dual ownership of land, and as far as we can see land cannot be economically worked unless by the landlord or the tenant, and the principal thing that any Commission should do is to try to get the land bought out on the most advantageous terms for the tenants.

32892. Why?—Because I believe that the land is not capable under the present agricultural conditions of supporting both landlord and tenant.

32893. I should think that that was a point of view that nobody would contest, but why should you wish to see the land purchased in the most advantageous manner for the owner?—What I mean by that is that I believe under the present conditions the tenant does not do his part in the proper working of the farm, and it would be best for the country and for its progress to see that the whole responsibility of working the farm should be thrown on his shoulders.

32894. Most Rev. Dr. O'DONNELL.—As proprietor he would have more inducement?—That is my idea. I believe that the tenants in this district are disposed to pay too high a price for their land, and that that is due in the first instance to the fact that a lot of American money is coming back into the country, and that a lot of police pensioners and other civil servants are coming back, and that they are anxious to get back to their old homesteads, and that in paying their prices they are not giving them on a commercial basis, and that they are going into undue competition with people who are trying to get their living out of farming and out of farming alone.

32895. What do you say?—I mean to say that these police pensioners and these returned Americans and others in paying the price for their holdings are anxious to give a price which is more than the farm itself is really worth, to give them a reasonable return on the capital they expended on it.

32896. And they are anxious to pay more than the farm is worth?—Yes, in order to get the homestead.

32897. Mr. SUTHERLAND.—Does the sentiment of attachment to the land induce them?—Yes.

32898. So that they are actually paying a sentimental amount of money?—Quite so.

32899. CHAIRMAN.—On what do you base that statement?—On my experience. I have been reared here in the country, and I have seen those returned policemen and Americans paying excessive prices for lands.

32900. How do you know it is an excessive price?—Because they have displaced farmers who, being industrious to my own knowledge, have not been able to make the farm pay.

32901. Then you think the standard value is measured by the success of the previous people?—No; that is not at all my idea. I think that undue attachment to their homestead has induced them to give inflated prices for their farms.

32902. May I ask you how do you estimate what is the proper price of a farm?—I cannot give you any idea of that, but I can tell you that I have known farmers who, using their best energies as well as they could, have not been able to make their farm pay, and they have been compelled to put it up for auction, and the people with capital from other countries returning home, simply from their desire and attachment to their old country, have paid undue prices for the farms.

32903. How long ago has this happened?—Within the last two years.

32904. When did you first notice it?—Well, the first time it came under my notice was within the last few years.

32905. That is when you first noticed it?—Within the last five years.

32906. A man who purchased at that price five years ago is able to live on the farm?—He is able to live.

Apr. 25, 1907.

Mr. Bernard Fox.

32907. Although the previous man was not?—Perhaps he had not as big a family.

32908. Sir FRANCIS MOWATT.—You suggest also that he had his pension?—Yes, sir, and the capital that be brought home from America.

32909. Sir JOHN COLOMB.—Are there a considerable number of police pensioners who have an appreciable interest in the purchase of farms?—I should say that at auctions which have occurred in this courthouse within the last five years at least one-third of the farms have been purchased either by Americans or by retired Civil Servants.

32910. And those are Americans with capital?—Yes, sir.

32910A. Are they apparently putting more money into the land than their predecessors?—No, sir; on the contrary, I imagine that the sojourn in America or any other habitation has prevented them from putting their money profitably into the land and working it profitably. Their desire is merely to take a residence.

32911. I am merely trying to get the facts. When you find holdings purchased by Americans, as compared with their predecessors, would you say that they are putting more capital into the land?—No, sir; on the contrary I have one holding before my eye within a few miles of this town which passed in succession through five returned Americans, and each went on to work it, but after a few years found it a total failure.

32912. Did each buy at a higher rate than his predecessor?—The purchase money jumped up and down. The present man is seeking a buyer, and he has had to leave it.

32913. Each purchased the right of the other?—Yes.

32914. The tenant right?—Yes.

32915. CHAIRMAN.—Would you suggest that if a man had to sell a house for any reason, he should not be at liberty to sell it to the highest bidder?—No. He should be, certainly. My idea is that the sale of land between tenant and landlord is very uneconomic.

32916. But you are mixing up two things. This is tenant right?—Yes.

32917. And the landlord does not come into it at all?—No.

32918. What I understand you to say is this, that where tenant right is sold, a returned American or a man who has made money in other avocations than the land, an ex-policeman or any other man of that kind—that these people come in, and by reason of the capital they have accumulated pay a sum greater than an ordinary person in the district is able to give?—Yes.

32919. That is your point?—Yes.

32920. Do you wish to prevent that?—No. I say that on that account the tenant is induced to pay a higher rent to the landlord.

32921. The rent is exactly the same—the rent is fixed under the Act of 1881. That is not the way tenant right is sold?—I am not talking of the Land Act of 1881, but the Land Purchase Act.

32922. Let us understand what you mean. A holding or tenancy has a judicial rent under the Act of 1881?—Yes.

32923. The tenant is unable to meet it, and he has to sell his tenant right?—Yes.

32924. I understand that you object to people coming in, ex-policemen or returned Americans, and buying that tenant right?—No, but I hold that the reason the tenant is not able to get on is that there is an inflated rent put on him.

32925. The rent put on him is the judicial rent under the Act of 1881?—That is put on him on the supposition that there will be a returned American or such people coming in to buy it.

32926. That under the Act of 1881 a judicial rent is fixed on the supposition that an ex-policeman will come in—what do you mean?—Broadly, my idea is that rents are utterly uneconomic.

32927. Are you objecting to the way in which rents are fixed or to the sale?—I do.

32928. To which?—I am objecting to the prices that are given at the sale for the tenant right of the land, which prices are unduly inflated, for the reason that people do come in who are not working the land on commercial principles.

32929. Most Rev. Dr. O'DONNELL.—Is this your point—that the Americans and ex-policemen come in to buy, and that on the prices they pay in court the Sub-Commissioners are induced to put up the rents?—That is exactly my point.

32930. And not only that, but that when it becomes a question of the tenants buying out the holdings from the owner, the tenants, by reason of this competition, by reason of the amounts which the retired policemen and Americans pay for tenant right, are led to give a higher price for their holdings than they would otherwise give?—Yes.

32931. I understand that that is the drift of your evidence?—Yes.

32932. CHAIRMAN.—Now, what is the first point—do you say that every man who wants to sell his tenant right should be prevented from selling it to the highest bidder?—No, I do not.

32933. How would you prevent policemen and others from coming in?—I do not want to prevent them, but I want to see that in the sales as between landlords and tenants the price is not forced up.

32934. Let us take the first stage, the tenant right?—As regards the tenant right I am quite anxious that the tenant should be allowed to sell it.

32935. And that he should sell it to ex-policemen and Americans?—Yes.

32936. And you are prepared to see the returned policemen and Americans buy the tenant right for any sum they choose?—Yes.

32937. That is number one?—Precisely.

32938. What is the next stage?—I say that in the case of a farm sold to the tenant by the landlord, the landlord takes advantage of the excessive prices that have been paid for the tenant right in insisting on an increased price for himself.

32939. Do you mean to say that because a high price for tenant right has been paid, the landlord asks that therefore a high price should be paid for the property?—Yes.

32940. Mr. SUTHERLAND.—Does the American or ex-policeman come into competition with the purchaser?—Except as generally giving the impression of the price that the landlord ought to ask for his land.

32941. But he gets a certain number of years' purchase of the land?—Under the 1903 Act the landlords wish to have the basis of purchase the reduction which the tenant will get.

32942. Sir JOHN COLOMB.—Is it your opinion that the price should be such that the money when invested in reasonable securities should bring him in his net income—do you think he ought to be compelled to sell for less than that?—I certainly think so, sir.

32943. Take the case of a tenant farmer. Why would you not allow him to pay a price which would give the landlord his net second term income?—Because I think the purchaser would lose on the increase of foreign competition.

32944. Do you say that the prospective chances of reduction through foreign competition should influence the price?—Yes.

32945. And you think that the landlord would take that into consideration?—I know they should, but I know they do not.

32946. How do you say that you know they do not?—From my knowledge of the sales that are impending in this district.

32947. But from your knowledge, specially from your own knowledge, can you give a concrete instance of a landlord who asks more than what would secure him his net income?—I am talking of transactions generally.

32948. Have you any instance of a landlord asking for a price that would give him a greater income than he had before?—No, sir; but for this reason, that I have not found anyone who will go into the particulars of his rental and tell us what was the cost of collection, or go into figures to disclose to us generally what his net profits are.

32949. Do you accept this principle or not, that if a duly constituted tribunal should find that a landlord's net income was so much the landlord should then be entitled to receive the capitalised amount to provide it?—I would like to have a reduction made for the increase of foreign competition.

32950. CHAIRMAN.—How could you as tenant estimate that?—It has been estimated already.

32951. How?—Well, the second term rent is on the average, I think, about 2*s.* under the first term rent. Calculate that on the fifteen years.

32952. We should calculate the same reduction at the end of fifteen years?—Some allowance of the kind.

32953. May I ask you why you think the fixing of the third and fourth and fifth term rents should be done in that way?—Because, as far as I can see, the causes that have operated for the decay of Irish agriculture would operate more strongly still.

32954. Are the prices of agricultural produce falling now?—I could not say.

32955. Sir JOHN COLOMB.—Have you ever looked into the question of prices now and fifteen years ago?—Of cattle?

32956. No, but prices generally of agricultural produce. Are you giving evidence here and giving information without having examined the tendency and course of agricultural prices over a period of years?—My opinion is that the question of prices does not decide it. It is the question of the exhaustion of the soil.

32957. May I take it as your answer that you have not examined it?—Yes.

32958. And that the question of prices rising or falling is not to be an appreciable factor in determining the value?—It is one of the factors.

32959. But you are not prepared to say that for agricultural rents it is the main factor?—That depends upon what you mean by the main factor. It is one of the factors, but not the most important.

32959A. What do you consider the most important—if it is not the most important factor in determining agricultural rents, what do you conceive is the most important factor?—The most important factor I should think was the soil, whether it would be exhausted under agriculture or not.

32960. Is not the soil the instrument of production, and the value of production must affect the whole question?—Yes.

32961. Mr. SUTHERLAND.—Do you think, Mr. Fox, that the original reductions under the Act of 1881, and the subsequent second reductions, were reductions because of the value of agricultural produce?—I cannot fathom.

32962. Do you think that the reductions made in the rents of Ireland were reductions from economic rents?—I do not.

32963. They were deductions from rack rents?—Yes, sir.

32964. So that the question of the future valuation of land should be taken into account?—I think that in estimating the value of land you must first allow the tenant and his family to get a decent living.

32965. That is a general principle—though it is not one that has been observed in Ireland—that you will have to take into consideration again when you are estimating the deduction to be made from the landlord's rent as compared with the old rack rent?—Quite so.

32966. And that being so there would be a point at which the excess of rent in Ireland would come to something like an equitable arrangement after the first or second term?—Yes, sir.

32967. They have not arrived at that point now?—I do not think they have.

32968. Mr. KAVANAGH.—How many reductions would it take to bring the rents to that?—We would have to go into the question of providing for the farmer first, and to allow himself and his family to have an ordinary competence before the landlord got anything. Then the surplus profits of the farm might be divided between the landlord and tenant.

32969. But in answer to Lord Dudley you stated that you must take into account the reductions which will take place in the next third and fourth terms. I say how many years will it take eventually to wipe out rent altogether?—That depends on so many things that I cannot really answer. It depends on the introduction of Canadian cattle and other things, and I really could not undertake to answer that question at all.

32970. Sir JOHN COLOMB.—You consider a factor in the rent is the number and strength of a man's family?—Yes, sir.

32971. And therefore you think a man who has no family ought to pay a higher rent than a man who has a family?—That is not my view at all. As I have said, the occupier of the farm should first be allowed to live in decent comfort, and that afterwards the surplus produce of the farm should be divided, on whatever principles may be devised, between the landlord and tenant.

32972. But a young man without a family could live in greater ease on the land than a man with a large young family. Do you admit that, or do you not?—What?

32973. If you had to determine the rents of two holdings exactly in all respects alike, there being on the one holding a strong young man and his wife without any family and on the other holding an oldish man not in good health and with a large family, you would make a difference between them?—I say, sir, that you could not get any tribunal whatever that would go into that question at all.

32974. Most Rev. Dr. O'DONNELL.—I think we may assume, Mr. Fox, that under the Act of 1881 fair rents were fixed?—Yes.

32975. Under the Act of 1881 rents are revisable every fifteen years?—Yes.

32976. Now, when the first term rent is fixed, the Court is supposed to fix the rent for the coming fifteen years?—Yes.

32977. When the second term rent is fixed, the Court is supposed to fix the fair rent for the next coming fifteen years. Is not that so?—Yes. I do not think that that is quite right, because when the Act of 1881 was passed there was no idea that the rents would be revised after fifteen years. They fixed the rent at what would be at that time a fair rent.

32978. It works out the same way at all events, I think. After the fifteen years' period you know the second term rents were fixed?—Well, they were fixed, but it was not provided that the fifteen years' period should be stereotyped.

32979. It might be changed afterwards. But when second term rents are fixed those second term rents are supposed to be for the second period of fifteen years?—Yes.

32980. Now, in fixing second term rents, have the first term rents been reduced?—Yes, considerably.

32981. Is it your point that the same reasons that now lead the Land Commissioners to reduce the first term rents to the second term rents will further appeal to the Commissioners to reduce the second term rents as third term rents and fourth term rents?—Quite so.

32982. You have no reason in your mind to think that the considerations which induced the Commissioners to reduce the first term rents to the second term rents will not operate to induce them to reduce the second term rents at the third term?—To an even greater degree.

32983. That is your opinion?—Yes.

32984. Whatever the causes are?—Yes.

32985. I suppose the Commissioners in fixing the rents have never declared what their reasons were. But that is your opinion?—Yes.

32986. You do not see any reason for thinking that as the first term rents were reduced when the second term rents were fixed, the reverse process would be followed?—I think there would be nothing to show that.

32987. Sir JOHN COLOMB.—Have you read the Act of 1881?—Yes.

32988. Do you not see in that Statute that the rents would be subject to revision at the end of every fifteen years?—Yes. What I mean to say is that the Act of 1896 stereotyped the period of fifteen years.

32989. Was it not in the Act of 1881?—It was that there would be one period of fifteen years. Under the Act of 1896 they are subject to revision every fifteen years.

32990. Now, taking the rents on the second term, let me ask you this—did not the Act of 1896 also open and widen the allowances to be made to tenants in regard to improvements?—Yes.

32991. And was not this enlargement of the powers of the Commissioners to deal with past improvements one of the reasons for the fall in second term rents?—I was certain that that provision was not incorporated in the Act of 1881.

32992. But that is so?—That is so.

32993. And that has brought the thing as regards improvements to its final stage?—I do not think it has brought it to its final stage.

32994. But at all events, assuming that it has, do you think the tenants will look for a reduction at a similar rate every time the landlord is brought into Court? I understand you to take that view, and,

Apr. 25, 1907.

Mr. Bernard Fox.

that third term rents will again suffer a similar reduction?—I say that the causes operating for the reduction of second term rents below first will, in my opinion, continue. I may be wrong in that opinion, but in estimating the prices that the tenants should give for their holdings I think that they should look at that reason.

32995. Supposing the prices rose—and they have risen—you know that the prices of agricultural produce have risen since 1881?—They may have in some cases.

32996. But the official figures show that they have in all cases?—I know how official figures are collected about here.

32997. CHAIRMAN.—You speak about the same causes operating. What are those causes?—I do not know.

32998. Then you do not know what you mean by the phrase you have yourself used?—The causes that have operated are, in my opinion, that the tenants are not able to pay the rack-rents which they did formerly.

32999. You say that the same causes which resulted in the reduction of the first and second term rents are still operating?—Yes.

33000. What are those causes?—The causes are that the country is going on in the usual way, and that when the Commissioners who have been appointed by the Government in the country to come and fix fair rents the fair rents are twenty per cent. less than they were in 1881.

33001. Forty per cent.?—Forty per cent. Well, I cannot see any change in the situation of this country or in the progress of this country to indicate that any of those things will not continue for the next fifteen years.

33002. Do you mean to say that after two reductions, resulting in a fall of forty per cent. in rents, the situation is exactly the same as it was before that?—I do not say that.

33003. But if it is not that, why should there be necessary further reductions—what are the reasons which make you think that there should be further reductions?—I do not know that rents are now less than they were twenty years ago, reviewing the farmer's budget.

33003A. But is not that rather an argument against you than in your favour?—I do not see that it is.

33004. The original rent was what you call a rack-rent?—Yes.

33005. It cannot be called a rack-rent now?—I think the original idea was that the landlord should first get his rent out of the land no matter what the tenant got. I would like to put that idea aside, and to see that the tenant and his family should get a decent living out of it before the landlord should get anything.

33006. Before the State?—Not before the State. Before the landlord.

33007. But the State puts itself into the position of the landlord?—Yes.

33008. According to your theory the tenant holding the land should first have what you call a decent living, and where the tenant has purchased, the State annuity should come after that?—Yes; and I think the Inspectors of the Commission should see that the State should be secured in that way.

33009. You think that is a security to the State?—That all depends on what is paid to the landlord.

33010. How do you define what you call a decent living and decent comfort?—I cannot define it.

33011. How is any body of men or any individual to define what is a decent living?—Well, a decent living is, I suppose, that a farmer and his family who work hard should get the ordinary meals.

33012. What are the ordinary meals?—I suppose they would be bread; and sufficient clothing; and nothing more.

33013. Mr. SUTHERLAND.—And education?—And education. Provided that they got these.

33014. CHAIRMAN.—And do you think that is possible for any people?—I think it is roughly.

33015. You talked just now of what you call reviewing the farmer's budget. Does not the farmer's budget depend to a certain extent on the prices of agricultural produce?—Very largely.

33016. It does?—Yes.

33017. And then the price of agricultural produce operates largely on what the farmer has to pay for his holding?—Certainly.

33018. Then if it can be shown that the price of agricultural produce has risen that has to go, to a certain extent, against any further reduction?—I would say so.

33019. In a country like ours, does not public opinion govern all questions of rent to a large extent?—I do not know what you mean by public opinion.

33020. This country is governed by public opinion. Parliament is governed by public opinion. And has not public opinion something to do with the fixing of rents in Ireland as much as economical causes?—I think so.

33021. That is an element that you have overlooked?—It is a most important element. In my opinion you cannot treat the Irish problem from the economic point of view.

33022. You cannot treat the Irish problem?—The Irish land problem; because it has never been in the past.

33023. You say that in fixing annuities the Inspectors should first of all arrange that the tenant and his family should derive a comfortable living from the holding. Let us take the case of a holding of which we have heard, of a man, which is so poor that it is incapable by itself of returning a livelihood for his family. What is to be the fair rent in that case?—Nothing.

33024. Then in all cases where the holding is so poor or so small that it is impossible for a farmer and his family to live on it, no rent should be paid to the landlord and no annuity paid to the State?—I should be very much surprised if the State bought such a holding.

33025. But in that case if the tenant was the purchaser of a small holding of that kind, the State should not demand any annuity at all?—Well, the State should not sell it to him except on terms that would enable him to earn a decent livelihood on it.

33026. And those terms are nothing, of course, as no possible rent could be got out of it, and therefore it represented no money value?—I would certainly be a strong opponent of the State purchasing a holding on which the tenant, no matter how hard he worked, could not make out an existence.

33027. Take the case of a labourer's cottage. The labourer has a house and an acre of land. It is obvious that he cannot make a living for his family out of an acre of land?—I do not think that is the object of the Labourers Act, but to give him such an allotment as will enable him to make a living for his family.

33028. If he is to live he has to look in other directions?—Yes.

33029. Does not the same thing apply to a certain extent to the man that has three acres of land?—I think there is the greatest possible difference between them. In one case the labourer has a garden attached to his house. In the other the man has a holding on which he is supposed to make a living.

33030. Suppose he has a holding of three acres?—Yes.

33031. And is it possible to make a living out of it?—No.

33032. In that case, is he a farmer or a labourer?—A labourer.

33033. In that case you say there should be rent paid although the holding is too small to give him a living?—I am speaking of farmers making a living out of farms.

33034. But there are obviously many holdings which are incapable of producing a living for a family?—Yes. That is a matter for the security of the advanced money.

33035. There are many cases where the holding is so small that the man cannot earn a living for his family from it, and he has to look to other sources of employment for his livelihood. What have you got to say to those cases—is that a fair rent or is it not?—It is, of course.

33036. But it is a fair rent on a different basis?—Quite so; but I should like to deal with the cases which are most numerous, in which the man has a holding from which he is supposed to make a livelihood.

33037. And then there are a great many holdings that do not fall under the Labourers Act, on which a judicial rent is fixed and on which a man lives who, in the opinion of most people, may be considered a farmer although he cannot make a living out of that.

On what basis is the rent to be fixed in a case of that kind?—I really think I know as little about that as the Commissioner who fixed the rent.

33038. That means to say that on that point you have got no information?—Absolutely none, and I do not believe any Judicial Commissioner has either.

33039. Sir JOHN COLOMB.—Are you a farmer?—No, sir.

33040. Have you had any experience of farming?—No, sir. Now, as regards the Labourers Act, I think that the legislation which was intended as an instrument for providing cottages with an acre of land was conceived on a wrong basis altogether. In the environs of towns it may be good and quite satisfactory, but out in the country there is absolutely no need for labourers. The farmers, in my opinion, as far as I can see, are not able to pay the labourers for their present agricultural work, and, on the other hand, the labourers are not able to live on the terms the farmers are able to offer.

33041. CHAIRMAN.—Then what is to be done?—The splitting up of the large grass farms.

33042. And have you ever calculated or gone into that subject at all?—I have.

33043. Do you know how much land is available?—I do generally.

33044. What do you mean by generally—can you tell us how much land is available in the province of Connaught?—I have never been over the province of Connaught, but I know that in this neighbourhood there are 3,000 acres.

33045. And what would you call this neighbourhood?—Between here and the town of Roscommon, away on the borders of Roscommon.

33046. Now, take the County Leitrim—do you know how many acres are available?—I do not.

33047. Or how many in the County Roscommon?—Generally I would say at least 3,000 acres between here and Roscommon.

33048. Have you calculated how many people there are?—I have not the slightest idea. If you cut up those 3,000 acres into 20-acre holdings you will get a decent farm for every one of them.

33049. How do you know that there are not many more men?—I am certain there are more who would be only too anxious to call themselves farmers.

33050. Do you think that if you broke up 3,000 acres in this neighbourhood you would satisfy this whole neighbourhood?—I do not say that, but it would go some way in that direction.

33051. What would happen to the remainder?—I think it would be better to settle some than settle none.

33052. But what is to happen to the remainder if you cannot settle them all on the land?—They cannot possibly get labour on the farms.

33053. And they cannot have land?—It is not there.

33054. Then what is to be done?—I suppose they will have to do what they are doing for the last thirty years

33055. What is that?—Trying to struggle as well as they can. I do not understand your notion that because you cannot provide for every labourer in Ireland you should not attempt to provide for some.

33056. How do you suggest that holdings should be found?—Except under the present system.

33057. What is that?—It is as bad as it can be.

33058. But if they have no place to live and if they do not labour and have not got land?—They would emigrate.

33059. That is not struggling on here?—No, but in the course of time the new generation will emigrate if the present conditions are allowed to prevail. If we cannot keep the whole of them at home I would suggest that you would try to keep the most you can, and I would propose the splitting up of all grass lands. If that will not keep them all at home it will keep at least a respectable percentage of them. I do not like the idea that because you cannot provide for the whole of them you should not attempt to provide for any of them.

33060. I do not think anybody would attempt to suggest that?—No.

33061. Most Rev. Dr. O'DONNELL.—Now is there no remedy but emigration for these? You say as things stand there will be no employment for labourers?—That is so.

33062. Now you suggest that a partial solution of the problem would be found if the large grass lands between here and Roscommon were taken and portioned out into moderately-sized farms?—Yes.

33063. It has been stated that there is much more than the quantity you mentioned?—I am sure, but I gave that as the most conservative estimate.

33064. Now, what should be done with those 3,000 acres? Should they be all under grass or should they be tilled?—At least a fourth of it, I imagine, should be tilled.

33065. Some portion of them should be tilled?—Yes.

33066. I believe it would be splendid land for tillage?—I believe it would, but I am only talking of it at second-hand. I am not a farmer myself.

33067. I assume that a fair proportion of the land between this place and Roscommon would be good for tillage?—I believe there is some of the best land in Ireland there, but I cannot tell you from what I know myself, but from what I have heard, because I am not a farmer myself.

33068. Would you provide for those labourers by making them peasant proprietors between here and Roscommon?—Yes.

33069. May I suggest to you that some of the others instead of having farms given to them would find employment as labourers on the tillage that would be developed in that way?—I do not believe they would. I do not believe that any of those peasant proprietors could afford to pay labourers half-a-crown a day all the year round, and I believe that is the minimum on which a man could live and bring up a family.

33070. On a question of that kind the labourer himself would be a better judge than you?—Certainly.

33071. Would you endeavour to supplement your answer to Lord Dudley then by considering how far the balance of the population could be provided for through agricultural employment and agricultural pursuits on those moderately-sized farms, and how far labourers at a greater distance from Roscommon could also be provided for on those holdings?—I cannot speak for Roscommon.

33072. Mr. SUTHERLAND.—There is no reason why it should be limited to Roscommon?—No.

33073. There is plenty of room in all Ireland?—Yes.

33074. And some of them might be shopkeepers and go into trade?—Yes.

33075. You stated that there ought to be emigration, but as things are, do you not think that the present need is to solve this problem of congestion, and look round and see how many of the Irish population may be provided for on Irish land?—I believe that as far as Roscommon is concerned the population that is existing in it can be dealt with in the manner suggested.

33076. If that be so there will be no need for some time at all events of emigration?—No.

33077. Sir JOHN COLOMB.—I understood you to say in answer to a question that you did not think that men with holdings of three acres should be charged any rent at all for using them as residences?—I cannot see how they would get a living.

33078. I ask you plainly under these circumstances do you think they ought to be charged anything at all?—Certainly not.

33079. Would you charge them anything for taxes?—Yes.

33080. Now, I ask you this in reference to the way in which you propose to carry out this scheme of dealing with the 3,000 acres. Those 3,000 acres being purchased and split up into 20-acre or 30-acre farms, you would take those very small men away, since they cannot live on the three acres, and transpose them there—what sort of men have you in your mind?—The three-acre tenants.

33081. Most Rev. Dr. O'DONNELL.—What would you do with the three acres?—I would let it go into the surrounding divisions.

33082. Would you allow the 3-acre man to sell his holding?—Yes; I would take that into consideration.

33083. Yes—that the land being taken and split up into 20-acre or 30-acre holdings the men that you have got in your mind ought to be transferred there, the men you are describing, with three acres of land, who cannot possibly make a living out of it now?—It was Lord Dudley who suggested the case of men living on small farms and asked me what I would do in that case.

33084. Sir JOHN COLOMB.—Surely, you must know cases of men similarly situated in the district with such small uneconomic farms that they cannot get a living out of them?—Yes.

Apr. 25, 1907.

Mr Bernard Fox.

33085. I ask you is that the class of man you think ought to be transplanted from the congested area—the men of the smallest and most uneconomic holdings to be transposed from that area to the new lands—the 20-acre or 30-acre farms?—Yes, but I think there should be some inspector who should first report on the man's enterprise.

33086. But is it your opinion that for the relief of congestion, which involves the taking up of fresh land, striping it and all that, the class that is to be relieved by that operation is purely and exclusively the small holders in these congested areas?—Yes, I believe that they should get the first preference; and I believe also, apart from that altogether, that the grass lands of Roscommon and the surrounding district could be better developed than they are at present. You won't take me that my sole object in taking up grass lands is to present them to those who have uneconomic holdings.

33087. Would you explain that more fully?—My further reason is that they can be better developed than they are at present by being split up amongst people, who are thus able to earn decent livelihoods.

33088. I thought that you limited yourself to this, that the object of taking up the grass lands and dividing them up and building houses on them was with a view to transplanting men from the congested districts. I thought that was your principle and your view?—I thought that you wanted to commit me to that as the only reason that I would like to have the grass lands split up. Now, there is another question, that of the Cavan and Leitrim Light Railway which is passing over portion of the area, and for that the ratepayers I believe are now paying a shilling in the pound in this district. It is governed by a board of directors consisting of eight members, representatives of the shareholders. The shareholders get at present 5 per cent. and they have absolutely no interest one way or the other in its economical working. And there are also on it members of the County Council of the County Leitrim, the greater part of whom are not at all interested in the paying of the line. And there is a sum of £70,000 paid already out of the rates since the line was built in the year 1883 to the present time in part payment of dividends due to the shareholders who control the railway and have all the patronage in connection with it. I would suggest to you that the railway being in a congested district some portion at least of that most excessive burden should be borne by them.

33089. Leitrim is paying £6,759 towards the railway guarantee?—I do not think it is quite so much as that.

33090. These are the official figures, and I was going to ask you about it?—There is a Treasury contribution.

33091. That is the expenditure, but in relief of that local expenditure the Treasury contributes £4,295?—Well, the net sum given by the County Leitrim is about £3,000 I think. That represents a shilling in the pound on the railway-guaranteeing area, and the ratepayers who pay that rate have absolutely no control in the working of the line.

33092. Most Rev. Dr. O'Donnell.—How long have they been paying?—Since 1883 they have paid over £70,000.

33093. And do you think that that has a depressing effect on the farmers?—It must necessarily.

33094. Mr. Sutherland.—Is it a useful line of railway?—It is, yes. I think it could be much more developed if it was placed under more responsible management. And there are mineral works at Arigna which the directors proposed to extend the railway to, but they were alarmed at the fresh proposals and made it a *sine qua non* of their acquiescence in the suggestion that the railway should be put under popular or responsible control.

33095. Do you consider it a greater grievance to pay the money or to have no control over the management?—No control over the management.

33096. And do you think that it would make for the better management of the railway in future, and that there would be less to pay?—Yes. But apart from that altogether, I think that the Congested Districts Board ought to give some subsidy towards that line.

33097. Did the Government give any assistance towards the construction of the railway?—I do not think so. I do not believe they did.

33098. Most Rev. Dr. O'Donnell.—Is the capital all paid up?—The capital is not all paid up yet.

33099. Sir John Colomb.—Have you any means of knowing whether it is economically worked?—There is a baronial auditor, but he is merely an auditor, and of course an auditor cannot say whether a line is economically worked or not.

33100. Chairman.—Have you direct representation on the Board?—No direct representation of the people who pay. There are representatives of the County Council, but the majority of the ratepayers of the county do not pay the rate.

33101. They do not?—The majority of the ratepayers of Leitrim do not pay this rate at all. It is only the special area through which the railway runs. The County Council appoint four representatives, and of course the majority of the County Council represent portions of the county that are not included in the area at all.

33102. The County Council's representatives on the Board are men who come from the ratepaying districts?—They are in the minority.

33103. But they are on the Council, of course?—Yes, and on the directorate.

33104. Still they attend to the interests of the ratepayers?—They do. They are not always regarded. The majority of the directors are consistent representatives of the people who get their 5 per cent. no matter how the line pays.

33105. Sir John Colomb.—And they are responsible to the people who paid their money on condition that they should get their 5 per cent.?—Yes; it is just the case of a limited company on which the holders of the debenture stock run the entire concern. It is exactly the same case.

33106. Mr. Sutherland.—Do you make a point of the fact that the representatives of the ratepayers of the county should be limited to that particular area?—Yes; and that those representatives in conjunction with some representatives of the Treasury who give us a very large grant should control the entire line.

33107. Should the original shareholders not be represented at all—the men who gave their money to start it?—I cannot see that at all. They are perfectly sure of their 5 per cent.

33108. Sir John Colomb.—Is the line worked as an independent line or in connection with one of the big companies?—It is worked as an independent line.

33109. Mr. Sutherland.—Whose rolling stock runs on the line?—Their own. They have no connection with others. It is a narrow gauge.

33110. Sir John Colomb.—It is an entirely independent line?—An absolutely independent line.

33111. Now, speaking as a business man, where do you think you would be able to make the most of this money—where do you think money might be saved and improvements made which would be advantageous to the ratepayers?—I can, and I will, tell you one thing. The directors meet in Dublin once a month. They meet there once a month, and they have expensive offices to maintain in College Green in Dublin, and in my opinion this work might be just as well done in Ballinamore here. And another matter that I wish to bring before you is the construction of a bridge across the river between this and Cootehall, across the Shannon. Your lordship is familiar with the district by motoring. There is a tributary about a mile up the river, running through the town of Boyle, and the people in the country between that tributary and the upper reaches of the Shannon in coming into town have to go round by Cootehall.

33112. Has any representation ever been made to the County Council about a bridge?—Yes, sir, I think it has.

33113. And they did not see their way to doing anything?—They did not see their way to give the whole price of it.

33114. Mr. Kavanagh.—What is the whole price?—I believe the whole price would be £800 or £900.

33115. How many miles is that by road from here?—Ten miles, and if a bridge was constructed about one mile from Carrick-on-Shannon it would be a great convenience. It is quite common in this county that people coming to Carrick-on-Shannon have to go round by Cootehill. The people of Carrick-on-Shannon would be prepared to give a very handsome subscription towards it. On the far side of the river there is a very extensive bog, and there is no bog about Carrick-on-Shannon, and these people in the winter season find it very hard to save fuel, and I have known cases where people in indigent circumstances have had to pay a penny for six

sods of turf, which is barely sufficient to keep a fire lighting for half a day.

33116. Between Leitrim and Roscommon?—Between Leitrim and Roscommon.

33117. Sir JOHN COLOMB.—Should not the Leitrim County Council approach the Roscommon County Council in order to try to come to some arrangement if, as you say, the people of Carrick-on-Shannon are prepared to give a large contribution. Should not one County Council approach the other County Council—because really it is a matter for common arrangement and borrowing from the Board of Works?—The County Council of Leitrim have not considered that at all, because the people about Manorhamilton and other parts of the county are not sufficiently interested in it, and they do not believe in contributing a special rate for the accommodation of our town here.

33118. Most Rev. Dr. O'DONNELL.—Would the inhabitants of the congested districts here be benefited?—Very considerably by getting a market for their turf in Carrick-on-Shannon. 25 April 1907 Mr. Bernard Fox.

33119. Would the other bodies object to the construction of this bridge?—Boyle would to a certain extent. There is only one other point. In a portion of the district of Ballineen there is urgent need for the making of a road. The Congested Districts Board in one instance did give provisional sanction to a grant for making a road if the local rates also contributed, but the County Surveyor told us that we had reached the limit of expenditure imposed on us by the Local Government Act, with the result that a very large number of families have in the winter time to cross a stream and go by a precipitous route into Drumshambo a hardship which the proposed road if it were made would have obviated altogether.

Mr. PATRICK FLYNN examined.

33120. CHAIRMAN.—You are Chairman of the Rural District of Carrick-on-Shannon No. 1?—Yes.

33121. Are you in business?—I am in business, and a farmer as well.

33122. What business?—Grocery and spirit business.

33123. Carrick-on-Shannon?—Here in Carrick-on-Shannon. I may say in the first place that I am also Chairman of the County Committee of Technical Instruction and Agriculture, and that a great portion of the district over which I have the honour to preside as Chairman of the Rural District is congested, and I hold that all the county should be declared congested. You have the valuation, £138,000, and the population 69,400. That would leave about £2 per head. The Congested Districts Board, before amalgamating with the Department of Agriculture, spent each year something like £11,000 on live stock in Connaught, and since the amalgamation the only sum they spent is about £2,000, which they contribute to the Department.

33124. I do not think that is quite so. I think the improvement of live stock was only part of the work done before the handing over to the Department of the contribution of £2,000 a year?—Yes, for live stock only.

33125. Not for agricultural education?—For live stock only. What I want to point out to you in my evidence is this, that the congested areas are suffering severely by reason of not getting those bulls in those districts. They are losing a sum of £9,000 in the congested areas by reason of the amalgamation. Whereas the Congested Districts Board spent £11,000 on live stock, now the contribution towards that by the Department is only £2,000.

33126. £11,000 a year?—£11,000.

33127. They spent £11,000 a year before the amalgamation upon live stock in the county?—Yes.

33128. You are sure of that?—These are the figures.

33129. Then the remainder would not be made up by the Department?—The Department say that they have not sufficient funds to meet the deficit, and thus it is that the congested areas are neglected.

33130. Am I wrong in thinking that a sum of £14,000 was devoted by the Agriculture Department to live stock?—I am not aware of it.

33131. Sir JOHN COLOMB.—Are you aware what was the amount of the Department's scheme of agriculture for the county for the current year?—£400.

33132. For live stock in Leitrim?—Yes. The point of my evidence is this, that by reason of reducing the amount of the grant for live stock the congested areas are suffering.

33133. Most Rev. Dr. O'DONNELL.—In the first years after the transfer, I suppose the supply of animals was very small?—Very small; you might say practically neglected so far as that was concerned at all events.

33134. CHAIRMAN.—In the first place, I think you are wrong when you say that the Congested Districts Board spent £11,000 a year only for live stock. They spent £11,000 in 1903-4, the last year, not only for live stock. They spent it on agricultural work of all sorts in all the congested areas?—They spent a great deal more than that in Connaught.

33135. The Congested Districts Board spent £11,000 in 1903-4 on agricultural work in all the congested areas in Ireland?—In Connaught.

33136. Not only in Connaught, but the whole of the congested areas. Now, this current year, 1906-7, £14,700 is being spent by the new Department upon agricultural work in the congested areas in the same areas on which the £11,000 was spent before. That is made up of £1,500 of rates, the £2,000 that you have in the grant of the Congested Districts Board, £1,500 from the Department, and a special grant by the Department of an additional sum of £9,700, making up £14,700. Mr. Patrick Flynn.

33137. Most Rev. Dr. O'DONNELL.—You will find such big expenditure as for the current year was not made in the past year?—It was not.

33138. This big expenditure is only for the current year?—Yes. I am only confining myself to live stock. I beg to state that Leitrim is not fairly treated so far as scheduling a sufficient quantity of it, on the basis that, although the valuation is nearly £2 per head on the whole of the county, we have out of seventy-eight divisions only thirty-eight scheduled as congested; and whereas the valuation of the whole county is only £2 per head you have only thirty-eight divisions scheduled out of seventy-eight.

33139. And do you know of your own knowledge that in the area not scheduled there are lands as poor as those that are scheduled?—I do, and if the Commissioners go over the area during their visit I could show them districts that would convince them that they are districts that ought to be scheduled, and that have been neglected for years.

33140. Mr. KAVANAGH.—Do you suggest that the whole county should be scheduled as congested?—Yes.

33141. The whole county?—Yes.

33142. CHAIRMAN.—You do not suggest that the Congested Districts Board have had any power to schedule them?—I do not say that they had, but there was not sufficient attention given to them.

33143. You do not suggest that the Congested Districts Board had power to schedule?—I do. I believe there are several places where they could.

33144. Do you really believe that the Congested Districts Board have powers to schedule an area if they choose?—I do believe that.

33145. Then you have got to read the Act?—I dispute altogether the fact that they should stand on ceremony if the valuation is for a general election.

33146. You may be right, and I do not say that you are not right, but it has nothing to do with the Congested Districts Board, because that is laid down in the Act of Parliament. It may be that the Act requires amendment, but it has nothing to do with the Congested Districts Board. They have no power to alter it?—I hope the Commission will. The valuation of our rural districts is £26,000. I want to point out how the rural district of which I am chairman is circumstanced. At our last quarterly meeting we had, as a matter of fact, applications from a congested area to do work that would amount to about £1,000.

33147. Mr. SUTHERLAND.—In connection with what?—With the making of new roads and bridges there, the principal portion of which came from congested districts—I may say more than three-fourths—and we had with one stroke of the pen to strike out the whole amount, as we had not a penny piece available for any new work.

Apr. 25, 1907.

Mr. Patrick Flynn.

33148. Mr. SUTHERLAND.—Could not you make a rate?—We had our rate fixed.

33149. But next year?—I am afraid our rates are too high.

33150. Sir JOHN COLOMB.—Was that an unusual demand made from the district which you refer to, or was it the same last year?—Well, since the Local Government Act we have had to keep these people waiting till we would get funds.

33151. Last year was there an application?—Yes, we had an application last year; and I want to take a case in point that came up a few days ago. The taxation on the land in the district I am referring to is 3*s.* 10*d.* in the pound. We considered that heavy enough without adding a new additional rate for the purpose of making a road.

33152. Mr. SUTHERLAND.—What is the principal item in that 3*s.* 10*d.*—poor rate?—Poor rate and county cess.

33153. What are the other rates?—The annual cost of upkeep. A great portion of the congested district is paying that shilling in the pound.

33154. Is sanitary rate included?—I am not including sanitary rate at all.

33155. Most Rev. Dr. O'DONNELL.—You say a great portion of the congested districts pays this railway rate?—Oh, yes. At that meeting of the Rural District Council there was a statement made that the congested districts would get a grant if the local authority signified their intention of joining them or finding a certain amount. That is the point, that I think the Congested Districts Board should not wait, because we have no money to expend unless we raise the rate. That is our position exactly.

33156. Mr. SUTHERLAND.—You think they ought not to wait till you have raised the rate?—I do not know. It would be very serious to raise the rates, because they are high.

33157. Mr. KAVANAGH.—Are you nearly up to your mark?—Yes.

Mr. SUTHERLAND.—Is there a limit?

Mr. KAVANAGH.—Oh, yes.

33158. Most Rev. Dr. O'DONNELL.—These people are not in a condition to bear an increase of rate?—They are not presently. I was present in the Court when the last witness was being examined on the question of uneconomic holdings, and I would like to say one or two words with reference to that. There are a lot of uneconomic holdings in more districts than the ones that are scheduled as being congested, and I see that in this very district there are about 1,300 or 1,400 acres of land available I do not say that it is not all occupied, but I know of my own knowledge that the land is available and could be had at a reasonable price for the purpose of relieving congestion and doing some little migration.

33159. CHAIRMAN.—You are a farmer yourself?—Yes.

33160. How many acres have you?—I have in the County Leitrim about forty-five Irish acres, and I have also some land in Roscommon amounting to about 200 acres.

33161. Do you graze cattle?—Oh, I graze my own cattle.

33162. But you have 200 acres?—I have no land except that I bought the tenant's interest in the land myself, and that is presently occupied.

33163. You are not a landlord?—No, a tenant farmer, paying a good deal too much rent.

33164. Did you ever hear of one who was not?—I have. I want to say that although I am a tenant of this land, if the resources of civilization were exhausted, I would not mind parting with any portion that was necessary for the country.

33165. Sir FRANCIS MOWATT.—How much altogether is the holding?—About 240 acres. My Roscommon farm was occupied by my father and mother. They are alive and they are occupying the farm.

33166. CHAIRMAN.—About how much is it?—About 200 acres.

33167. That is also a grazing farm?—Grazing and tillage.

33168. How much tillage?—I suppose about eight or nine acres. There are two families there on it at present.

33169. Sir JOHN COLOMB.—Sub-tenants?—No, sir, workingmen, herds.

33170. CHAIRMAN.—Are your father and mother judicial tenants?—Judicial tenants, yes.

33171. What would you say if it was proposed to take 150 acres from them?—Well, if there was 150 acres taken—the farm is divided into two by the road—I would not have the slightest objection, not a bit, if they were properly compensated. Of course they bought at a high price.

33172. Sir JOHN COLOMB.—It is a question of business and a question of money?—Well, more or less. But there is a little more than that, there is a sentiment, too, because there might be some men that would not like to give it up at all, no matter what the price was.

33173. "There might be some." You mean that there are some. And what would you do in that case?—A compulsory Bill. That is the only thing I can see.

33174. Are those men tenants?—Very few tenants.

33175. Landlords?—Yes, men who have land in their occupation and do not want to part with it, and men who have property and do not want to part with it.

33176. Most Rev. Dr. O'DONNELL.—Where do you buy the cattle?—In the fairs.

33177. What age?—One, two, and three years old. I forget whether I stated that about 1,300 or 1,400 acres are available—1,300 or 1,400 acres in the rural district alone, 700 of what I call not occupied by the owner, not in their immediate control. They are not working it themselves with their capital.

33178. Sir JOHN COLOMB.—They are let on the eleven months' system?—Yes. Quite so. And then the balance of the land I refer to is land that the owners or tenants all could do without if they got a reasonable price for it, and it could be used for the benefit of the congested area.

33179. So it comes down to the question of price in the main?—I have already stated that I believe there are cases where men would not part with them.

33180. Those are the exceptions?—They are. I hold that if a man has 100 or 200 acres, and works it for the benefit of the district and lays out his money on it, somebody gets the benefit of that.

33181. Most Rev. Dr. O'DONNELL.—Supposing he works it as a grazing farm?—There may be cases in which the land is not suited to anything else, but they are very few.

33182. Do you employ labour?—Yes.

33183. Throughout the year?—Yes.

33184. How many labourers?—According to the season and the work to be done. In the harvest season we do have a great deal of men and also in the spring season, and there are other times when we have not.

33185. And do you hire those men from the neighbourhood?—Yes.

33186. Men with very small holdings?—Yes. I keep some of them constantly myself in my own employment.

33187. They have houses on your land?—Yes, they have two houses, and two families, and two families living in them in addition to the men themselves.

33188. Sir FRANCIS MOWATT.—Is that common to farmers holding as many acres as yourself, that they employ labour?—I know some of them in Roscommon having a couple of thousand acres of land and they never employ labour at all.

33189. Sir JOHN COLOMB.—They take it on the eleven months' system, and they only require a herd?—It is the owner of the land that provides a herd generally.

33190. Whether the owner stocks it or not, or whether he lets it out, there is a herd?—Yes.

33191. And there may be one or two herds?—According to size.

33192. Mr. SUTHERLAND.—That is all the labour that is required in a large farm of 2,000 acres?—Very often that is all.

33193. Now you say you have some three-year-old cattle. When they are disposed of are they ready for the butcher?—Yes. We fatten some on the land and also fatten some in the winter.

33194. And then they are ready?—Yes; they are sold ready; and some others are shipped to Scotland and England to be sold there.

33195. And what is the reason why they do not do that more commonly on the large grass farms—keep them till they are ready for the market?—They keep them as long as they are able till they cannot do any more. That is what I do.

33196. Do you house those cattle?—In the winter time.

33197. And do you feed them with any artificial food?—Yes; those cattle that we want to finish we feed on turnips and cake and meal.

33198. Which is more profitable for you—to fatten them to the third year or sell the second year?—I never keep cattle after three years. I buy at two years and sell them at three.

33199. CHAIRMAN.—Which would pay best?—If they could be fattened it would pay best.

33200. Do you find that you have more profit with those that you yourself fatten?—Yes.

33201. Why, then, do you not fatten all your cattle—why sell any small stock?—It would be impossible to fatten them all.

33202. Tell me why?—Well, in the first place it would entail a great deal of labour and superintendence.

33203. But if your profits are so much better, would not it more than pay for the increased labour?—These things require close attention and consideration and all that.

33204. Mr. SUTHERLAND.—If you had two cattle, three-year-old, stall-fed, would not the same labour feed twenty?—I do not think it would feed twenty. I would say ten.

33205. CHAIRMAN.—But if you were released from your business here and had time to devote to it?—I would not fatten any more cattle.

33206. Not even then?—No.

33207. Why not?—Because it would be just as well to get them into such a forward condition that they would be used for shipping purposes. Some of them might go across and some of them be finished.

33208. You told us that you found that you derived much more profit from the animals which you fattened up for the butcher than from those stores?—I think my evidence was that it paid best to keep a beast till it would be fat—I think that is to put them into the most forward condition that you can put them.

33209. Why should not it be done?—Well, my opinion is that they pay me as well to have them fattened for shipping as any other way; and then there are certain kinds of cattle that we have at all events for the butcher. We get two-year-old stores and fatten them.

33210. What do you do with the others?—Put them into a forward condition for shipping purposes.

33211. It would not pay to fatten them?—No.

33212. Why not?—They would not be weight enough. There is very little shipping of butchers' cattle, and the principal shipping trade in cattle is that a man buys stores, puts them into a forward condition, sends them on, and then they would be kept for a short time still and then sent to England.

33213. Then the cattle which he fattens are fattened entirely for local use?—Yes.

33214. You have not got a market for fat beef?—Not in the district, not nearer than Dublin.

33215. That is for foreign use; but you have got a certain local market for fat cattle?—Yes.

33216. And that you meet by fattening a certain number of your beasts for that at home?—Yes.

33217. But you have not got any direct market for fat beef in England?—Not in the neighbourhood.

33218. In England?—I dare say there is.

33219. But you could not attend it?—No.

33220. But you are in connection with people who buy and forward stores?—Yes.

33221. And they pass these forward stores on to the men at the other side?—Quite so.

33222. That is you are not in immediate touch with the demand for fat meat in England? You prefer not to fatten your beasts to the last point?—Yes; I am not well acquainted with the details of the cross-Channel trade.

33223. Sir FRANCIS MOWATT.—Do you find that the cattle now being sent suffer?—I think they do.

33224. From your experience, can you say whether cattle fattened for immediate killing are more likely to suffer in going over to England than store cattle, the more forward cattle?—I believe they would—the fat cattle.

33225. Have you no experience of that?—No, sir; I have not sold any fat cattle at all.

33226. Sir JOHN COLOMB.—May I ask you, on the average, how many cattle have you on the 200-acre farm?—I will tell you as nearly as I can—and sheep and horses. I breed a good many horses. I think I have about nineteen or twenty; and what we generally would have would be 100 cattle.

33227. And what proportion, approximately, do you keep till they are fat for the local market—a very small proportion?—Yes, the number would be small. I could not say all the year round. People might not take them in summer and in the winter time.

33228. So that in the process of working your farm you employ labour, and you also are keeping the land in heart by putting cake upon it—is not that so?—Yes, that is so.

33229. You are not merely working it as a grass farm—you are not taking everything out of the land?—No.

33230. And you employ labour and capital on the land in order to do your business most efficiently?—Yes.

33231. And do you find that treating the land in that way for grazing purposes, giving it cake, and treating it fairly, and putting capital into the land, is really more profitable than if you were to break up more land in tillage for the purpose?—Well, at present it suits my programme best not to have any more, because I find great difficulty in getting labour, and labour is very dear.

33232. Now, tell me is that the general custom in dealing with this class of land for the owner to put out cake and to put the land in heart?—As far as my experience goes of the men of that description or size of holding all about that neighbourhood they take in grazing cattle, put in as many cattle as they can generally. That is what they do. Other people's cattle.

33233. When the land is worked, as you are working yours, would owners or occupiers mostly treat their land as you do, putting in cake?—I would say that the majority do not.

33234. Now come to the farm worked on the eleven months' business. Is there anything put on that land at all?—Not that I know of.

33235. Then as to any land under your observation that has been worked for a long period of years on the eleven months' system, do you consider it to be deteriorating?—Well, as a general rule land that is kept under grazing cattle and that is under meadow, as a rule is not deteriorating, but it is not as productive as it might be made. It is what I call neglected land. The man tries to take whatever is in it out of it.

33236. Again, I ask you as to those lands which are worked on the eleven months' system, and where nothing is put into the land, is it your opinion, from your observation, that that land is deteriorating?—I think as a general rule with cattle grazing on the land it is not deteriorating—certain kinds of land might; but I say that the land might be made more productive.

33237. Mr. SUTHERLAND.—Have you seen land with cattle go back to rushes?—I believe that is so. That is what I say, that the land could be made more productive. I also heard the last witness make a statement about the sale of the property. A question was put to the last witness, who is a colleague of mine, whether the landlord should get his rent or not if he sold his estate. There is an instance on record where I offered myself on behalf of the tenants and made application to the landlord to purchase their holdings under the present Act, and we offered to give the landlord his present net income provided that he gave us the right to have a public accountant to say what the net income was, and the result was a refusal to sell.

33238. Sir JOHN COLOMB.—Had you a correspondence with him?—No, sir; we met him together in the Courthouse in Drumsna.

33239. And what was the ground of objection?—He would not allow anybody to see his books.

33240. CHAIRMAN.—Was it through the Estates Commissioners that you made the proposition?—We made it through the Estates Commissioners to give him his proved net income provided he gave us a public accountant to say what his net income was, or any other independent authority.

33241. Have you any objection to give the name?—Not the slightest. The estate is the Rowley estate—Mr. Rowley.

33242. Sir JOHN COLOMB.—You mentioned an independent authority. Did you understand the landlord to object to letting the Estates Commissioners see his

Apr. 25, 1907.

Mr. Patrick J. Flynn.

books?—No; but in speaking of representing the tenant, he did not want to have anybody representing the tenant knowing his business.

33243. Did you understand him to object to show his accounts to the Estates Commissioners?—My impression was that he objected to allowing any independent authority to find out what his net income was.

33244. But do you call the Estates Commissioners an independent authority?—I do.

33245. Did you ask him if he thought that?—No, sir; we did not ask him that.

33246. Would the tenants have been satisfied—would you now say, as you negotiated the matter, and are a man of business yourself and of large experience—"We are satisfied to give you your net income if on an examination of the Estates Commissioners they say it is your net income"?—Well, sir, that is rather a stiff question to put to me, because the tenants might have changed their minds since.

33247. But going back to that time?—Yes, at that time the tenants were prepared.

33248. Did they say so?—They did, sir.

33249. They were prepared to give him the amount to secure his net income provided that the Estates Commissioners certified what the income was?—I stated that we offered to pay the lawful price to be settled by the Estates Commissioners; and the tenants would be prepared to do that again to-morrow, I believe.

33250. CHAIRMAN.—What you offered to him was to give the full net income on condition that some public authority should certify that that was the net income?—Quite so.

33251. Sir JOHN COLOMB.—And did you consider at the time and did the tenants agree that the independent authority should be the Estates Commissioners?—No, they did not; but he did not think it was any part of their business to look into his books and find out what his net income was.

33252. CHAIRMAN.—You did not suggest any special authority and you did not say that the authority should be one appointed from the tenants' point of view, but merely to have an expert accountant?—Merely an expert independent authority to find out what the net income was.

33253. Sir JOHN COLOMB.—Who should appoint him?—The tenants.

33254. The independent authority was to be appointed by the tenants?—Yes. When I say independent authority I am afraid the Commissioners do not understand. I mean a recognised authority such as a public accountant, who would know what figures meant and what the keeping of accounts meant.

33255. And appointed by the tenants?—Yes, sir.

33256. Mr. SUTHERLAND.—You did not name any person?—No.

33257. CHAIRMAN.—I suppose any chartered accountant would have satisfied you?—Yes.

33258. Any certified chartered accountant who was well known would have satisfied you?—Yes, when we were satisfied that he was an independent authority and that he would give an honest opinion about the matter without any suggestion on the part of the landlord.

33259. Take a firm of recognized chartered accountants in Dublin?—We would have been quite satisfied.

33260. Mr. KAVANAGH.—What class of tenants?—Generally all second term.

33261. Any untenanted land—were you an eleven months' tenant yourself?—No.

33262. All judicial tenants?—Yes.

33263. Would not you say the second term rents, less a certain amount?—And other expenses, too.

33264. Less the cost of collection. You have probably read the terms of the Land Conference, that second term rents less 10 per cent. for collection would be the net income?—I think it would be a little more.

33265. Those are the terms of the Land Conference?—I will admit that, but I do not think the landlord should get it at 10 per cent.

33266. But that would be the quickest and surest method of arriving at net income from judicial tenancies?—I still hold that there are other expenses that the landlord must be out.

33267. Sir JOHN COLOMB.—Who is to direct the accountant as to what were the expenses that should be included?—You could see by the books, of course.

33268. But Mr. Kavanagh asked you with respect to 10 per cent., and you said you were not satisfied with that because there were other expenses?—I believe it costs the landlord more than 10 per cent.

33269. Mr. KAVANAGH.—What other expenses?—For instance, he has a lot of income tax to pay. That is not included in the 10 per cent.

33270. But he will have to pay income tax on his net income?—And there are certain cases where a man through no fault of his own can pay no rent; and in my opinion it takes more than 10 per cent.

33271. Sir JOHN COLOMB.—Was the question in dispute in this case, that the net income should be not the net income of a particular year, but the average over a series of years?—For that year; for the very present year; to give him his present net income.

33272. It was not to give him his net income calculated over a series of years, but on the particular year immediately preceding the tenants' application?—"The present net income." That is easily understood.

33273. The proposal was not to give him his net income calculated on an average of years, but his net income on a particular year, the year immediately preceding the negotiations for sale?—The income of that very year.

33274. Now tell me another thing. Had the landlord had any question between him and his tenants the previous year—was there any feeling that he would not sell, or anything about withholding rent?—The tenants believed that the rents were fixed a bit too stiff, and they tried to reduce the liability by buying it at a reasonable price, and they offered 22 years' purchase, and the landlord wanted 24½, and there was considerable pressure used by myself and the Parish Priest of the district, and we tried to come to a conclusion at 23 years' purchase of second term rents, and the landlord also refused to accept that; which I considered was a very stiff price

33275. What year was this that you had that meeting with the landlord?—It was in 1905.

33276. The tenants wanted to buy, thinking that their second term rents were too stiff?—Yes.

33277. When you were going into the question—were there large arrears on that estate?—I am not aware that there was a single tenant on it that owed more than a year's rent.

33278. And was it on the particular year preceding that that the net income was to be calculated?—That very year. You asked me were there any arrears of rent due and my answer was that I did not think there was any tenant that owed more than a year's rent, and my belief is that nine-tenths of them did not owe a shilling at all. Well, that is my opinion. There might be an exceptional case where a tenant had not time to pay his rent or had no means.

33279. CHAIRMAN.—And was there any mention of coming to any arrangement or compromise?—This was a final offer to make it 23 years' purchase and then he would be entitled to his bonus.

33280. Was there any sort of reply to that?—The statement was that we would have to take his net income from his figures.

33281. And then there was no question of splitting merely upon the fact that you wished to buy out on the net income for one year. He did not say that taking the net income for one year would not do, and that you must take it on the average of five years? He did not say that?—No, he did not.

33282. Sir JOHN COLOMB.—Taking your own case, made in a particular year as a basis (because there are good years and bad years)—would you, as a man of business, accept the purchase of your trade on the basis of a particular year?—As a man of business if I found the interest in my business was going down every year I think it would be my interest to sell on that present year's income rather than to wait longer and get less.

33283. If your business was going down?—Yes.

33284. And if it was not going down?—I hold that that was the exact condition of the landlord, and I can prove it.

33285. CHAIRMAN.—But whether business is going up or down, that point was never made?—No.

33286. He never did state that he was not prepared to take it for one year?—No.

33287. There was never any suggestion whatsoever or any point made that it should be spread over a period of five years?—No.

33288. And do you think if he said, "One year is not a good guide. You will buy me out on the basis

of the income as shown for the last five years," do you think you would have split over that?—He would not have made any proposition of that sort, because the basis was so many years' purchase of the second term rents or so many of the first term, so that you could not say that the average for five years would mean any more or less.

33289. But supposing he wished to put it in that way. If he said, "One year's net income is not, to my mind, a sufficient guide, and I am willing to sell on the basis of net income as shown by an average of five years," do you think that would be agreed to?—I do not think that would interfere with the tenants in the least if he was satisfied to leave the finding out of that net income.

33290. To a chartered accountant?—Yes.

33291. If he said, "I will sell on the understanding that the basis on which the net income is to be arrived at is not the income of one year, but the average income of five years," you do not know any reason why the tenants would have objected?—I do not.

33292. Most Rev. Dr. O'Donnell.—How many years before were the first term rents fixed?—The times varied, my lord. Some went in immediately after the Act came into operation. Some did not go in for three or four years.

33293. Suppose they had been fixed only three years before, in those circumstances it would be reasonable for the tenants to say, "In case you took the average of five years, only the second term rents, or rents taken on the basis of the second term should come in?—Yes, it would.

33294. And was the programme of so many years' purchase of the existing rents in reference to second term rents?—I may say that the first offer to the owner was to give him a certain number of years' purchase, and if he did not like that, to give him his present income as found out by a public authority or chartered accountant, and the third was to buy out through the Estates Commissioners.

33295. What I want to know is, were those offers definitely made to the owner?—I am the person myself that met the owner and made the offer in the public court, in the courthouse.

33296. And it took three forms?—It took three forms.

33297. So that there were three bases?—Yes. And the substance of the reply was that he would make out his net income himself, and that if we did not take that, and if we wanted to buy our holdings we would get them for twenty-four and a half years' purchase; and I believe he afterwards agreed to drop the half-year.

33298. Sir John Colomb.—Some were first term rents, and some second term?—Nine-tenths of them were second term.

33299. Was the number of years' purchase named on second term rents?—First term would be twenty years, and second twenty-three. We offered him twenty-three for second, which, of course, comprised a very large majority of the tenants.

33300. Chairman.—You, on behalf of the tenants, made a proposition to buy on three bases—first twenty-three years purchase of second term rents, and twenty of first term?—I could not positively swear to the twenty years' purchase of the first term, because it did not enter much into our terms at all; but on an equivalent, you may be satisfied about that.

33301. And if he did not take that you were prepared to buy him out on the basis of net income so long as he allowed a chartered accountant to find what his income was?—Yes.

33302. And, third, that you would be prepared to leave it to the Estates Commissioners to decide what was to be the price?—Yes, that is so.

33303. And the reply was that as regards the first, he would only accept twenty-four years' purchase of the second term rents; and as to the second, that he would accept his net income, but that you must take from him what was his net income. And then as regards the proposal with respect to the Estates Commissioners?—He refused it altogether. The tenants would be prepared to buy through the Estates Commissioners—even now.

33304. Do you mean that even now they would be prepared to buy at his net income as certified by the Estates Commissioners over a period of five years?—I have not consulted the tenants, because I think if they asked my advice—I am sure they offered too much at that time.

33305. How many tenants?—Some hundreds of tenants.

33306. Is it a very large property?—Very large.

33307. Do you know the acreage?—I do not know the acreage. The agent to this landlord is in court and he can tell you.

33308. Sir John Colomb.—Was there any untenanted land on this estate?—No.

33309. Chairman.—What is the agent's name?—Captain Darley.

Captain Darley.—I am Captain Darley. I have not looked into the figures so as to be able to answer all the questions connected with this. Otherwise I would not have the least objection.

33310. Chairman.—Can you between this and the morning, or on Saturday, give us the figures?

Captain Darley.—I would rather say anything I can about it at present. I cannot give you the acreage of the estate which you ask for, but I can find it out very quickly.

33311. Chairman.—I do not want the acreage of the estate. What we would like to know would be Mr. Rowley's point of view with regard to the offer we have been told about, and if you are not prepared to do that to-day, because you have not had opportunity of refreshing your memory about the transaction, the Commission would be very pleased if you could come here or to Mohill to-morrow or next day.

Captain Darley.—I have no objection to giving you my recollection of it at present.

33312. Sir John Colomb (*to Witness*).—You have something to say about the light railway?—A great portion of this district that we are in at present contributes 1*s.* in the pound in order to maintain the upkeep of the railway. A few years ago we paid 2*s.* or 2*s.* 6*d.* I know we paid 2*s.* for the upkeep of that railway.

33313. Mr. Sutherland.—Therefore the railway is improving?—Yes.

33314. Do you anticipate that by and by it will pay its way?—I do not. I am in the happy position of being a director myself. I am one of the directors representing the County Council.

33315. Sir John Colomb.—And you are representing on the County Council the barony charged with the taxation?—Yes.

33316. Mr. Sutherland.—May I ask whether the amount of the guarantee has been increasing?—It did increase, because we had a rate of 10*d.* and it is 1*s.* But there has been a decrease.

33317. Has the decrease of the guarantee been steady?—It fluctuated considerably for some years.

33318. It is in proportion to the amount the railway earns?—Yes. Some years there is a large amount of expenditure in the purchase of new rolling stock and material for which the rate is paid by the guaranteeing area. I may say at once that in my capacity of director of it I am completely powerless to do anything on behalf of the ratepayers so long as the gentlemen representing the shareholders' capital are in the majority, and I hold the same view as my friend, Mr. Fox, when he says that those people have not the slightest interest in the good working of the railway because no matter how it goes they get this money from the guarantee.

33319. Have you done your best?—I have done my best.

33320. Sir John Colomb.—Have you offered to give evidence before the Railway Commission?—Yes, we have offered to give evidence before the Railway Commission, but the time is not fixed.

33321. Mr. Kavanagh.—What is the name of it?—The Cavan and Leitrim Railway. I hold that if the Commission has power to make a suggestion, it would be a great remedy for the grievances I refer to if the County Council was better represented on the Board of Directors, if it had a majority on the Board.

33322. Sir John Colomb.—What is the deficit in relation to the capital?—The deficit forms, I believe, the mass of the shilling in the pound that is given.

33323. I mean that the deficit you have to make up represents a certain amount, and I want to know what proportion or what relation that bears to the total of the capital?—I cannot show you the figures of the exact amount of their capital, but I will explain it in this way, that 5 per cent. is paid on their capital though it is only an odd year that they pay

Apr. 25, 1905.

Mr. Patrick Flynn.

their expenses without paying any dividend on the capital.

33324. Mr. KAVANAGH.—Do you think you could make the line pay if you could look better into it?—I am afraid not, but I think a great many grievances could be relieved if we had a voice on the Board.

33325. And could the expenses be reduced?—I think they could, and that there could be a good many amendments.

33326. But it never could be made to pay?—I am afraid not.

33327. How long has the guarantee to run?—It is for ever.

33328. It is not for a certain number of years?—No; for ever. And whereas several of the other light railways in Ireland got their capital at 4 per cent., on this light railway 5 per cent. has to be paid. Then look at the amount of dividends paid up. There could be plenty of money got at 4 per cent. for this line too.

33329. Do you suppose you would get people to pay off 5 per cent. debentures and be prepared to take debentures at 4 per cent.?—I believe we could get plenty of money at 4 per cent. for the asking of it.

33330 Taking it as a business man, there are certain debentures at 5 per cent.?—Yes.

33331. And of course one per cent. makes a difference in the guarantee. Do you think there is enough money in this railway under present conditions to pay off that and give 4 per cent.?—They would not take the money. They want to get the market value.

33332. You mean to say that they are not terminable annuities?—Yes.

33333. And there would be no power on the part of anybody connected with the railway to redeem?—No. In my representative position I am asked to bring before you as forcibly as I can the fact that Leitrim has been very much neglected by the Congested Districts Board—a very much neglected county. I have already pointed out to you in the early part of my evidence that a great portion of this Rural District is mountainous country, on the slope of the mountain, and we have not sufficient money, as I said before, for making accommodation roads there, or roads at all, and a great many of these people have to grow farm produce and carry the farm produce on their backs to bring it into the market. And I wish to bring it before you that these districts want more particular attention. And within a mile or a mile and a-half of Carrick-on-Shannon we have a case that has been already mentioned to you, where simply because we cannot get sufficient money to build a bridge, there are people who have to travel nine Irish miles to get to their market, which they could get to in less than two miles.

33334. CHAIRMAN.—We have heard about the bridge?—There is one little matter in connection with it that I would like to mention, that a further advantage from it would be that there are three or four miles of bog unexplored except when a sportsman goes over it, and that could be made available. And on the other side of the Shannon they have no such thing at all; they have no bog to get fuel from unless they went across in a row boat.

33335.—That was also mentioned?—Well, I did not hear that.

33336. Most Rev. Dr. O'DONNELL.—The land on the other side would be used for fuel?—Yes, and it would be very valuable. You have a large territory of unoccupied land right beside the bog on the other side of the river. It is not my view, sir, that public opinion at all affects the case of rent, that it has anything at all to do with the fixing of a fair rent. That question was put by one of the Commissioners.

33337. Mr. SUTHERLAND.—What do you think?—I think the market value of farm produce in addition to the cost of labour—I think those are the things that should form the basis.

33338. What fixed the rent in Ireland?—The Land Act, I take it.

33339. What fixed rent in Ireland previous to 1881?—The landlord and the bailiff, of course.

33340. Then after that the Act regulated it?—Yes, it did.

33341. And public opinion?—Yes; but I do not believe the Commissioners fix fair rents on a holding.

33342. But I should say that would be a question for legislation?—But you asked a previous witness whether public opinion was a matter that affected the fixing of fair rents.

33343. That was not the way?—Then it is all right, sir. I was also asked to point out as our suggestion to the present Commission that there should be a representative from each of the congested district counties, that there might be more attention paid to them, on the Congested Districts Board.

33344. CHAIRMAN.—You want five representatives for Connaught?—We would be anxious. We believe that these districts would not be neglected as they are at present.

33345. Mr. SUTHERLAND.—You do not assume that that is part of their duty?—I do assume that.

33346. Is the present Board representative?—Oh, yes; there are representatives on the Board; representatives of Connaught, of course.

33347. And is it because they represent Connaught?—It was believed at the time that they would make the best representatives for Connaught; but these gentlemen, rightly or wrongly, gave more of their time and attention to other counties, for instance, Mayo.

33348. Mayo has had more attention from the Congested Districts Board than Leitrim?—A great deal more.

33349. Why?—Because it was better looked after—because the same interest has not been taken in it as in Mayo.

33350. Do you mean that Leitrim has not a representative?—Yes.

33351. Has Mayo a representative?—Oh, yes; a very good one.

33352. Do you think that that is the reason that the gentleman from Mayo is on the Board?—I am aware that he would have more interest in his own county, and he has not sufficient knowledge of Leitrim.

33353. Mr. KAVANAGH.—Do you suggest that that gentleman was put there as a representative for Mayo?—Oh, no, I do not. There was no opportunity for Leitrim, but Connaught had the opportunity.

33354. Mr. SUTHERLAND.—I presume you refer to Father O'Hara?—Yes.

33355. Was he put on the Board simply because he was from Connaught, or because he was a gentleman who had an interest in the work?—I suppose because he had an interest in the work.

33356. CHAIRMAN.—If you were to have a representative on the Congested Districts Board, how would you suggest that that representative should be chosen?—From some elected body. The County Council might make the best selection.

33357 Nominated by an elected body?—Nominated by an elected body.

33358. You think that a better plan than asking the Government to do so?—Yes; that might be an element; they might be selected by the Government. I think these people would know the districts best and the county best, and know what would be the best remedy for it. Those are the counties that would have the best right to select the men and would be the best judges, and the County Councils could nominate two or three, and then they could select one out of the three.

33359. Mr. SUTHERLAND.—And then you would have a representative from each county of Ireland in which there was congested districts?—Yes.

33360. You know the number?—The number is not very large.

Captain DARLEY examined.

Captain Darley.

33361. CHAIRMAN.—You are agent of the Rowley property?—Yes; I have been agent for the last twenty-five years, from about 1882 or 1883.

33362. You remember the occurrence to which the last witness referred?—Yes.

33363. Can you tell us why the landlord declined to allow an accountant to advise the tenants as to the amount of his net income?—There was no question of any accountant at all, but a question of the tenants wanting to investigate Mr. Rowley's private affairs, and he said he would not allow them to investigate his books.

33364. But you have heard from the last witness that according to his account of the transaction he on behalf of the tenants made an offer that the estate should be bought on the basis of net income on the condition that some chartered accountant or other independent authority should examine the books, and should advise the tenants what his real net income was?—I am afraid I dispute that entirely.

33365. What is your view?—My impression is that the tenants wanted themselves to investigate Mr. Rowley's accounts and Mr. Rowley's books.

33366. Most Rev. Dr. O'Donnell.—Were you present during the negotiations?—Yes.

33367. And listening to what passed?—Yes; I was with Mr. Rowley at the time.

33369. If there had been a proposal to pay an accountant to examine the books do you think that the landlord would have accepted it?—I think he was quite satisfied to sell provided he got his net income calculated on the investment of the purchase money at 3¼ per cent., that is the average price, or fair price for trust securities; and of course he would more or less have dealt with that through me, but in the office. Those were the terms of the Land Conference. But there was nothing more about it. We had no letter, and there was no more about it.

33370. Sir John Colomb.—I presume, Captain Darley, that on this estate, as on every great estate, the rental and cash account would show the receipts and the disbursements, and the remittances?—Yes.

33371. And I presume there would be no difficulty on taking your books in finding out over a series of years, whatever the number of years might be, what were the receipts, and what were the outgoings, and what was, in fact, the net income?—There was no difficulty at all, no. Of course you must remember that remittances do not represent income.

33372. I never suggested that remittances would; but really what I merely wanted to know was that there was an accurate account kept in the office year after year?—Yes.

33373. So that if the Estates Commissioners called upon you to produce your books and said, "We will base price on the net income," would there be any objection on the part of the landlord or yourself to show the Estates Commissioners or any person in authority your books?—Not the least.

33374. Mr. Sutherland.—Why was not it done?—It was not called for.

33375. Sir John Colomb.—We heard there were three methods proposed. The first was so many years' purchase of second term rents; the second was this net income question, and the third was to leave it to the Estates Commissioners?—As a matter of fact the net income proposal came from Mr. Rowley himself. He said to the tenants that he was prepared to sell to them if they gave him his net income.

33376. Chairman.—What was the reply to that?—I think that the reply to that was this meeting. I think this meeting was in reply to that. I have not looked into the sequence of it.

33377. Are there no written records of this transaction?—I do not know whether there are or not.

33378. Are there no letters or correspondence which passed as to the employment of a chartered accountant or the production of the books which you mentioned to Sir John?—No.

33379. No letters on this particular subject at all?—No.

33380. And the whole of the communications with regard to that matter were made by word of mouth?—Exactly. Made at the time by word of mouth.

33381. When the owner made that proposition about his net income did he make any proposition about proving to them what his net income had been?—I do not think so.

33382. You say that the tenants wanted to examine his books?—Yes.

33383. Did he meet that by offering to submit his books to a public authority?—I do not think so. I do not recollect.

33384. Chairman.—Mr. Rowley was willing to sell the estate to the tenants on the basis of his net income, but you could not expect them to take his bare word as to what the net income was?—I should hardly think that. I should have thought that if the principle of it was accepted the figures would have been produced, and would have been gone into in a businesslike manner; but there was nothing to lead up to its being a businesslike transaction.

33385. But how did he consider that the actual amount of his net income should be ascertained by the tenants?—I think his books show that, and the rental would show that.

33386. The rental would not show his net income—the bare statement in the rental would not show your net income?—Well, the rental shows the rental of the estate, the account books show the outgoings of the estate. They might all go together.

33387. But that comes to the same thing. How could the tenants be expected to take these figures on your merely presenting them with a statement of rental and a statement of outgoings, or merely saying, "give me so and so," unless you gave them an opportunity of checking the figures?—I should think that if there was any proper person appointed the landlord would have no objection to his seeing them, but he did not wish to have all his accounts investigated and spoken of by every person all over the country. Handing the books to an accountant who keeps his information to himself is a very different thing from letting every person about the country know all about your business.

33388. Sir John Colomb.—Who made the first proposal about sale or purchase at all—did it come from the tenants?—I think it probably did. I think that they probably must have expressed a wish to him to buy.

33389. And so that first proposal resolves itself into a proposal made by one side or the other, at all events, of a definite number of years' purchase?—I think Mr. Rowley, when he was applied to directly, offered to sell at twenty-four and a half years' purchase.

33390. Were those negotiations carried on through you?—They were very largely carried on by himself. I met the tenants with him. He called the tenants together.

33391. Did this meeting arise out of an inability to come to terms about the twenty-four years or whatever the number of years was?—No; I think it arose from Mr. Rowley meeting his tenants to discuss the matter. He met them in the courthouse.

33392. In this courthouse?—In the courthouse of Drumsna.

33393. Was there any reporter present?—I do not think so.

33394. Was there any report in the press?—There was a report in the country press, but I do not think there was any reporter present.

33395. That was quite a year ago?—It was more than that.

33396. Now, is it your belief or opinion that the landlord would be satisfied on the fixed basis that he was to retain his net income as the result of the transaction, and that that net income was to be established by an examination of his books by the Estates Commissioners or any other public body—am I to understand that the landlord would agree to that?—Of course I have had no consultation with him to answer it, but from what he has generally spoken to me I believe he would, the net income being calculated on the basis of investment of the price at 3¼ per cent.

33397. Now, the other question is this. I presume it is proposed that the net income should be ascertained over an average of years?—I do not think it makes any difference on second term rents.

33398. Does not one year vary with another?—But you buy on the rental. I do not think there is any very great variation.

33399. I will ask you one other question. Previous to the landlord offering to sell, and the question of purchase arising, had there been any other little difficulty?—No, none whatever. I would like to say a word. It is a little beside the question, perhaps, that you are talking about, yet I think it is not altogether irrelevant?—That is with respect to the railway line. As a matter of fact in all the fixing of the second term rents the railway rates are deducted from the landlord, and the tenants do not actually pay a penny of the railway rates. It is not taken out of their pockets, it is taken out of the landlord's pocket in the fixing of second term rents. The pink schedule will show that.

33400. Your evidence is that the pink schedule shows that the landlord pays that?—Yes, that is one of the things.

Apr. 25, 1907.

Captain Darley.

33401. Is it one of the things that go to the reduction of the landlord's net income?—Yes.

33402. CHAIRMAN.—Would you say 3¼ per cent. was the proper standard?—That, I understand, is what the Land Conference took as being the average price.

33403. But the money market has changed since that?—It has not changed by going up, at all events.

33404. But would you be surprised to hear that the stockbroker of the Bank of England told us the other day that in his opinion at the present time ten millions of money could be easily invested in trustee securities at 4 per cent.?—I have invested some trust funds of my own which I have had, and have not been able to get that rate, but that was what I understood that all the calculations were made on, taking the income at the average value of 3¼.

33405. Mr. SUTHERLAND.—Do you say Mr. Rowley was perfectly ready to submit his books to examination, but that he was never asked?—I did not say that, but I am perfectly satisfied he would be perfectly willing to hand them over to any authorised person, but not a person the tenants chose to appoint, and I do not think any landlord in the whole country would agree to do it.

33406. What were the terms of their proposal—did they ask to see the books? (That is what I gather from you.) They would not accept any information or figures unless they saw the books?—That is what I said. There was no question of any independent person being appointed.

Mr. MICHAEL CARTER examined.

Mr. Michael Carter.

33407. CHAIRMAN.—Where do you reside?—At Shanraw, Keshcarrigan.

33408. Would you kindly make any statement that you wish to submit?—All the divisions are congested with the exception of Keshcarrigan. There are very few grazing or untenanted farms which would be available for the purpose of enlarging the present uneconomic holdings. The only means through which an improvement could be effected at present would be through a proper system of drainage, and by the promotion of suitable industries. Every year hundreds of acres of cropped land are rendered useless through flooding. Too often the poor struggling tenants see their whole year's work rendered futile by the overflowing of their badly-engineered waterways. The task of facing this grievance without proper funds is an impossible one, and can never be undertaken without the assistance of the Government. The whole district abounds in peat, and, had the necessary money been available, there is no doubt but this commodity could be utilised in a manner similar to other parts of Ireland. Slieve-an-ierin which forms the northern boundary of the parish, has, even in the earliest ages been famous for its minerals. Several attempts have been made to establish mining industries along it, and, notwithstanding the opinion of several experts as to the richness of the locality, those efforts ended in failure for want of capital and proper means of transit. Only two estates have been purchased since 1903 on account of the extravagant demands of the landlord. These demands appear more extraordinary when contrasted with the prices at which estates in the surrounding parishes have been sold previous to that date. On the Peyton Estate, for instance, which lies between two others which were purchased out before the passing of the Land Act of 1903, the landlord demanded twenty-four and a half years' purchase. One of the two adjoining properties, the Fitzgerald Estate, was bought out ten years ago at ten years' purchase; whilst the other, the Lloyd Estate, was disposed of at an average of thirteen years' purchase; nor is this estate in any way superior to the others, as a matter of fact it is inferior, and consists chiefly of hilly, clayey land of the worst quality, worthy of the highest traditions of Leitrim hills. But the best example of the landlord's methods was furnished on the O'Byrne Estate. Seventeen years ago it was offered to the tenants at eighteen years' purchase, and to-day for the same property twenty-three and a half years' purchase is demanded. The same can be said of other estates in this district, and the exorbitant demands of the landlords clearly show that either the Congested Districts Board or the Estates Commissioners must interfere to see that the tenants get their land at fair value and not get them bound down by the payment of annuities which must render future comfort or prosperity impossible, and destroy every hope of success. There is not an estate in this district which is clear of arrears. The tenants have been so heavily pressed to meet the calls of their landlords that they would freely grasp at any appearance of relief, however transient, without taking into account the serious consequences of such a course as the free importation of foreign cattle. The threat of recovery of those arrears would have serious results, as it would be impossible for the tenantry to clear them off, and the abolition of State inspection would simply spell ruin. Instances of the injustices produced from want of this inspection have been demonstrated on the adjoining Lawder Estate, which was sold out last year. On this property the tenants no sooner signed their agreements to twenty-four and a half years' purchase than they found they had to pay rent for the turbary, which was before free, and they also became liable to a drainage tax. Both these additions, together with their present annuity, leave them paying as much as before, and they now find themselves in a more serious position than previously. Then if adverse circumstances prevented the payment of their rents they might hope in the landlord's mercy, but now even this hope is denied them. Numbers of our boys and girls have to emigrate every year to America to assist their parents in meeting their demands. The male population who are unable to purchase their passage to the United States must have recourse to migratory labour to England or Scotland to accomplish a similar purpose, and ninety per cent. of the rents paid in this locality are derived from either or both these resources. Without dealing with the evils of this system on economic grounds, had it been cut off from farmers who must depend on the land for a living, and as they are at present circumstanced, it would reduce them to the deepest poverty. There seems no tangible reason for excluding Keshcarrigan from the congested districts, as many of the holdings in the district are just as uneconomic as those in the scheduled areas, and the poor tenants on them as much require the benefits of being included, as those in any of the others.

33409. Most Rev. Dr. O'DONNELL.—The annuity would go on for sixty-eight and a half years?—Yes.

33410. And if there was a bad year the result would be this, that they could not pay their rent?—Yes.

33411. You say that the annuity should be fixed at such a standard that if there was a bad year the annuity would be paid?—Yes.

33412. That is to say that taking good years with bad he should be able to pay it?—Yes.

33413. Do you think that in this case to which you alluded some of these annuitants may not be able to pay a particular instalment?—They did their best to break off the agreement, and they have a solicitor employed with a view to their breaking it at present.

33414. On what grounds?—On the ground that they were not aware at the time of what they were doing. They were led to believe that they would get four shillings in the pound reduction, and even some of them were not two shillings in the pound better.

33415. Do you mean that there should be the supervision of some public body to see that the tenants should be advised of their liability in these matters?—Oh, yes; I expect that such a body would not advance much more than seventeen years' purchase on this land.

33416. Apart altogether from the amount of the instalment, are you in favour of this, that when land is being sold the greatest care should be taken to provide as far as possible, a reasonable amount of turbary for each person?—I would say that it should be provided, as they are at present paying for it appreciably in the fixing of the rents. But instead of that, here is a case where when the estate is sold the landlord reserves it and the tenant has to again purchase.

33417. Has he provided any?—Not very much, my

lord. Some of them have only twenty perches. He allows a strip of about seven yards in width and about twenty perches long.

33418. Was there any estate charge?—No, not on that estate.

33419. The charge was altogether a new thing?—Altogether a new thing.

33420. And the bogs finally were not included in the sale?—Not in the sale. Of course they had a right to turbary before the sale came off at all.

33421. And that is the ground on which they are going now?—Yes, my lord; and at the time the sale was going to be perfected the landlord brought them into his place, and, what was very uncommon, there was a certain amount of drink, and they were led into this, and they were not quite aware of what they were doing or they would never have faced it.

33422. How did the drink come in?—He was most anxious for the sale, and there were several townlands that held out and were not wishful to agree with the rest. The landlord resided in the place, and he came to them on several occasions and asked them to purchase, and told them when the inspector came they were to say that they had their land at reasonable value.

33423. Give us the name of that property, too?—The Lauder estate.

33424. Sir JOHN COLOMB.—Are you a tenant on that estate?—No.

33425. You are a farmer?—Yes.

33426. What is the size of your holding and the valuation?—17A. 3R. 9P., and the valuation is £9 15*s*.

33427. Now, with regard to these two questions, had those tenants had judicial rents fixed?—Yes.

33428. And was the question of turf to each of those tenants part and parcel of the facts stated in the pink schedule and basis of the rent—was it not?—Yes.

33429. And those were judicial tenants who had those rights secured to them under judicial decision?—Yes.

33430. Now, do I understand you rightly to tell the Commission that by the sale of this estate those rights were absolutely taken away from the tenants?—Yes, sir; he reserved them all and sold them.

33431. The tenants' rights were rights of turbary to each holding?—Yes.

33432. But outside of that the landlord had other bog?—Oh, yes, he might.

33433. I want to know had he?—I do not believe he had any more than what they were using.

33434. But a quantity of turbary remained in the landlord's hands after the other portion was applotted out under judicial agreement to the tenants?—Yes, by the sale.

33435. I am talking of before the sale. The tenants made judicial agreements about turbary?—Yes.

33436. Secured to them absolutely by the judicial agreement?—Yes, quite so.

33437. Did any bog remain over from that in the landlord's hands?—None whatever; the landlord reserved the whole of the bog.

33438. There is a bog, and there were so many tenants, and each had their piece?—Yes.

33439. I want to know did that cover the whole of the bog?—The whole of the bog.

33440. And the landlord had nothing whatever after the tenants were fully provided by judicial agreement with turbary attached to their holdings. Nothing left?—Nothing left.

33441. And is your statement to the Commission this, that the tenants when they agreed to purchase were allowed by the Estates Commissioners actually to lose their turbary rights?—Quite so. They lost their turbary. They had to pay for it. Each man had to pay a certain amount who took turbary—on the average £5 to £10.

33442. When did this sale actually take place?—About eighteen months ago.

33443. Have the tenants made any communication to the Estates Commissioners?—Yes, by petition.

33444. Has it been by letter?—By letter.

33445. Who carried on the correspondence?—Mr. Smyth. He is Member of Parliament for South Leitrim.

33446. Have you seen any of the letters?—Yes, I saw some of them. They said they had them under consideration, and the inspector would act on them.

33447. Is that since the purchase transaction?—Yes.

33448. But the land has not been vested in the tenants?—Oh, no, it has not.

33449. And the landlord has not received his money yet?—No.

33450. And you have it, as I understand, from the Estates Commissioners that there is an inspector going down to examine the whole thing?—Yes.

33451. And therefore you are crying out before you are hurt?—But at the present time you are paying 3½ per cent. till the matter is forwarded by the Government.

33452. That is a different question. This whole matter is now *sub judice*, and there is an inspector going down, and, therefore, it is not right to say that the tenants have lost, and have to pay for the thing?—Well, I hope not. I hope there may be some relief for them.

33453. Sir FRANCIS MOWATT.—The tenants thought that they had turbary when they bought the holdings?—Yes.

33454. And the landlord thought they had not bought the turbary?—Yes.

33455. Does the landlord say that he specially reserved it from the property he was selling?—It seems he did.

33456. The tenants say, "You included turbary in the holdings you sold us," and the landlord says, "I did not, and I am going to charge you extra for it." That is the position?—It is not even that the landlord said he reserved it, and that they said he had sold it, but the tenants would have a grievance inasmuch as they were paying rent before for it under the judicial agreements.

33457. Yes, but that is the position of the matter?—Yes.

33458. Sir JOHN COLOMB.—Have you ever seen an agreement for purchase between landlord and tenant?—Yes.

33459. You know that the position of the tenant, as defined by the decision of the judicial courts, is that the tenant agrees to purchase on certain terms everything he has under his judicial agreement. Do you understand that?—Yes.

33460. And that is what the landlord and the tenant is bound to?—What I wish to say to the Commission is that these landed tenants purchasing got 4*s*. in the pound, and when they paid for the property they had other taxes put on them.

33461. You are saying what I think you will find is not the case if they have a right to turbary under the judicial agreements?—Well, I hope so.

33462. Mr. SUTHERLAND.—When you say these tenants were worse off now than before they purchased, would they be worse off?—No, but only that they were worse off if they had to pay an annuity, and that the Government would not give them time.

33463. And then in that case they would be worse off?—Yes. They were led to believe 4*s*. in the pound would be of great value to them on second term rents.

33464. Mr. KAVANAGH.—Who led them to believe that?—Some of themselves.

33465. Sir JOHN COLOMB.—Then, having been given time, is it the difference between the landlord and the Government that makes you apprehensive—the landlord might give time, and the Government cannot do it?—No; they cannot possibly.

33466. Mr. SUTHERLAND.—Then if the landlord is so good, why not keep him?—We have been paying far too much for our lands. I may mention this about the wants of the parish I represent. It is a mountain district, with about 700 families in it, 300 of whom are living on small holdings ranging from £1 to £5 valuation, and 200 from £5 to £10 valuation, and the tenants of large grazing ranches in the place have signified their intention of allowing these to be split up. In all there are about 1,100 acres or so, and in Laheen Peyton between 400 and 500 acres, and the tenant is prepared to give up that, with the exception of what would make a reasonable holding for himself, as he finds it is not in any way profitable to him, as he is depending on the country to get grazing, and he said that if he had a small holding it would be far more profitable to him. Then there is another in Aughacashel, a grazing farm under a very small rent, about 300 acres, and the owner is prepared to sell that holding to the Congested Districts Board for distribution among those small holders.

33467. Mr. SUTHERLAND.—Is it in a congested district?—It is. And then there are two farms at present in the market—Aughamore and Drumrookill,

Apr. 25, 1907.

Mr. Michael Carter.

one of 103 acres and the other of 173, and those two are not in the congested portion of the parish. One other farm, Driney, is in that portion, and it would be a great advantage to the district if those holdings were purchased by the Congested Districts Board. Then there are other small farms. Those farms might be greatly improved by migration. Then, as the other witness said, the parish is liable to the railway tax, and I heard the last witness say that the landlords are the payers of this tax by the reduction of rent, but I can safely say that outside the guaranteeing area rents are reduced as much, though they are not paying this tax. He says the rents are reduced more on account of the people paying the railway tax. Well, I do not think such a statement can be true, for I find that outside the guaranteeing area they are reduced on the average just as much as within it.

33468. Are you charged with this tax?—Yes, I have to pay it.

33469. Is there any deduction for payment of this?—We pay it—1*s.* in the pound. Then I wish to refer to the want of drainage, which is badly required in my district. I have received a petition from the people which I hope the Commission will allow me to read. We have some rivers which badly need to be cleaned and scoured up generally in the district, and there are three or four rivers which are very badly in need of being opened, and, as I said, the evidence is sent forward to the Commission. The people are very poor in the district, and they cannot face it without assistance—some small assistance. There is a parish committee grant, and if that could be enlarged it would benefit the parish very much, as there are 700 families in it, and if it was doubled these things could be faced, and it would make great improvements practicable. If the Congested Districts Board would give us £100, or anything like that, it would be a great improvement. For the last three years our Parish Committee has got £50, and if it were increased to £100 it would help the district very much.

Mr. John M'Cabe examined.

Mr. John M'Cabe.

33470. Chairman.—You are a farmer?—Yes.

33471. Where do you reside?—At Gorteenmore, Carrigallen.

33472. What size is your farm?—Twenty Irish acres.

33473. Sir John Colomb.—What do you reckon that in statute?—Thirty-two.

33474. Chairman.—What is your valuation?—£14 5*s.* I have two small farms, one at £8 valuation, and the other £6 5*s.* They are under the one landlord, and they are near each other. They run beside each other; and they are under the one landlord.

33475. The two of them twenty acres together?—In or about twenty acres.

33476. Mr. Sutherland.—Is there a house on them?—No house on one.

33477. Chairman.—What sort of land is it?—It is both grass and crop. It is bad land, too. It is as bad land as I suppose there is in Leitrim.

33478. But you could manage to live on it?—I could if I had no rent to pay.

33479. What is it?—£11 15*s.* 6*d.* I don't suppose I could pay any rent at all in fair play.

33480. What?—In fair play I don't think I could pay any rent, except what would be very little.

33481. How long have you been on it?—I have been reared on it, and I am forty years of age, and I am working with my father since I was twenty. They had only ten acres first and they paid £8 1*s.* The money they paid it with came from America, and that is what kept us up and what paid the rent; and only for money which has come from that country there are not many in our locality who would be able to pay any rent. Of course they would be able to pay some, but it would be very little, that is, if they got fair play, because they are hardly able to live, hardly able to keep clothes on their children, and if they have any sort of a family and have them reared, one is destined for the States.

33482. About these remittances, suppose a man has a home in Ireland and some of his sons and daughters go to America, they send him money?—Yes.

33483. And if they married and died out in America would their children continue to send money to the grandfather and grandmother?—Perhaps there would be another family, but some of them might; and they might have some friend or another. And they would often get legacies, too. My father got one that kept him for years and years.

33484. Are there many remittances from America received by grandfathers from their grand-children?—No. Hardly any that I know. It is from their children before they marry, from their brothers or sisters or daughters or sons.

33485. Read what you have prepared?—This south-east portion of County Leitrim should be counted as congested, as the people are as poor in this locality as in the congested districts and the majority of the valuations are under £8. Drainage would improve this country more than anything, and if lime burning could be started as an industry it would also be of great use. The landlord of this estate, Mr. La Touche, offered it for sale twenty years ago at twenty years' purchase, and it was believed by the tenants that they could have got it for much less. He now offers, under the Act of 1903, to sell to the tenants at 4*s.* reduction in the £ on second term rents, and 5*s.* on first term rents. The Whyte estate was sold at thirteen years' purchase under the Ashbourne Act, and the Nichol estate at seventeen and a half years' purchase under the same Act, and some of the tenants find it difficult to pay their rents even with this reduction and a decadal reduction since. Most of the tenants in this country get their rent from America, as it would be impossible for them to make it out of the land.

33486. How many years' purchase would that be?—I suppose 23 or 24 years'. I think about that. That is the way the landlord offered it anyway. I was listening to him.

33487. Sir John Colomb.—Twenty-one years ago he offered it at 20 years' purchase?—Yes; there is a man in court that has a letter of that time to that effect, and it is in court if you want to see it.

33488. He had to pay 4 per cent. on his purchase money that time?—Yes; that was the Ashbourne Act.

33489. And now 3¼. That makes a difference?—Yes; it is a long time since.

33490. Had the tenants been into court?—They had not been into court at that time.

33491. Was it an old rent?—An old rent.

33492. And have the rents been reduced since?—Yes.

33493. I think you said your rent was £11?—£11 15*s.* 6*d.*

33494. Now what is your valuation?—£14 5*s.*

33495. Then would you be able to tell his lordship here in the chair that as a rule the rents are lower than the valuation?—Yes, that is right.

33496. The valuation is actually higher than the rent?—Yes.

33497. Well, have you heard of sales at about 20 years' purchase formerly?—Yes.

33498. Do you know that it was 20 years' purchase on the valuation that was higher?—It was giving the tenant a chance.

33499. Chairman.—Now, if it was 20 years' purchase on the valuation, were the rents then lower than the valuation?—My rent, or rather my father's, was more twenty years ago than what I pay now. It was about even. We held ten acres twenty years ago and it was £8 valuation and £8 1*s.* rent.

33500. Sir John Colomb.—The valuation now is more than that?—Twenty years ago it was £8 1*s.*

33501. Rent?—Yes. £8 1*s.* on one particular farm we held. We did not hold two farms twenty years ago, only one. It was £8 valuation and the rent was £8 1*s.*, and there would be very little difference.

33502. Tell me what the rent on that is now?—The rent is £6 on that now.

33503. Then the rent has come down?—Yes, from £8 to £6.

33504. Sir John Colomb.—Let me ask you about lime. You said lime-burning would be a great advantage?—I mean that it would give employment, but if it could be bought and given to the tenants to be

put on the land after draining. Draining is the first thing we want.

33505. You tell me, that years ago, when you were a boy, lime was put on the land?—It was.

33506. And did that stop after the Act of 1881?—That stopped since the help got scarce in our county, or the land got worse.

33507. Who had the limekilns?—There were plenty of them—every farmer had his own.

33508. So that was in the old days?—They used the lime-burning because they had turf in those days. Now we have no turf.

33509. There was a lime-kiln on your land?—Yes.

33510. There were several lime-kilns in this district?—Yes.

33511. And the tenants would buy all their lime out of the kiln, would not they?—In some cases.

33512. Who kept the kilns going in those days—who were the men who had the kilns—were they tenant farmers like you that had the limestone in their land?—Yes.

33513. And they sold the lime?—They sold it.

33514. Now, tell me this. They have ceased burning lime—they have no kilns going?—It is burned in some places, but people are not fond of paying for it and putting it on the land, and the land gets so wet in the bad seasons that the lime is no use. It is no use without draining the land.

33515. And was the draining better and the lime better in the old days when you were a boy?—Yes. Twenty years, and I may say twenty-five years ago or so, it was better, and twice as good a crop.

33516. And do you consider the land is going back?—It is, certainly.

33517. And why have the drains gone bad? It was drier because the drains were there in the old days?—No; it belongs to the season. The season was drier twenty years ago than it is now.

33518. You say the climate has changed?—Yes.

33519. When you were a boy working with your father did he do much drainage?—He was the most part of his time at it. Yes.

33520. And since that you have been most of your time draining?—I have not made a drain these fifteen years, and I have not the time. I was helping my father to work twenty years ago. He could not afford to pay a man.

33521. And why, when your father died and you had to carry on, did you stop drainage?—I carried on for him for years before he died, and I had a younger brother who assisted my father and he worked and so did I, and we would have more crop on ten acres.

33522. And now you get no crop at all?—I must pay a man now in the spring time, and sometimes you can't get him if you give him 5*s.* a day.

33523. Have you any sons?—I have a young fellow twelve years of age, but I have not any son working on the land.

33524. The only help you get is from your brother?—I get no help from my brother.

33525. And is your case very much the same as the case of the small men all round about putting lime on?—Yes, most of them have the same story to tell, and I know that long ago the tenants spent their time in draining and putting lime on their land, and they do not put it now. Yes, and mending part of the time—I do not say all the time.

33526. And now there is neither drainage going on nor putting of lime on the land?—And it wants more drainage.

33527. Most Rev. Dr. O'Donnell.—What sort of drains—open drains?—An open drain is no good in land, because you could not labour the land when there would be open drains in, and without labour we could not live. Well, with regard to the change, the land is actually wet. I remember in our own land there was a large field, and now the greater part of it is rushes, although it was the best field we had. That was all through the change of climate, and there is no help but to drain it. The most important thing is drainage and lime. I remember reaping seven crops of oats out of the same field in succession after two crops of potatoes, and now a second oats crop is not worth the cutting. That happens for miles around, not on my farm only, but for six miles around.

33528. Mr. Sutherland.—Then till the land is drained it is not quite so fit for lime?—No. Lime is no use till it is drained.

33529. I think you said turf was not available for burning lime?—Yes, because we could not burn any lime now, for we are not able to keep the fire up. The turf that was used here we got out of bogs beside us. We did it for 100 perches before the landlord's men sent us off. It was in their estate, and there was no outgoing on our side except an odd amount.

33530. It was a neighbouring estate?—A neighbouring estate and a neighbouring county to boot.

33531. And was there a charge made then?—Yes, and it was very good to get it at that. And a new man took that farm from him, and he no longer gave the power to cut it, but kept it all for himself. We paid this con-acre rent to his tenant, and the tenant put it in his pocket, and the landlord knew nothing about it. And the landlord found out that he was selling the turf, and he took us up to the High Court in Dublin without our knowing anything about it, and he took up about seventy tenants, and made them pay about 13*s.* or 14*s.* costs.

33532. The tenant of a neighbouring estate was selling the turf to you?—Yes.

33533. And then the landlord discovered that?—Yes.

33534. And he objected to it?—He objected to it.

33535. And he took legal proceedings against you?—He did, and we paid our way there, and it was not us that he had a right to prosecute, only the man that sold it to us.

33536. He took an action at law?—Yes; they took an injunction restraining everybody from cutting turf there, and restraining also the party that was selling it, from selling it by the bag or crate or anyway.

33537. And then you had to go a distance?—We had to go to twenty times farther—six miles away, and that was not, I believe, more than about a quarter of a mile—about fifty perch.

33538. Is there an abundance of turbary where you are cutting it now?—There is, in the County Longford, but we have to pay for it, and it is just six miles.

33539. Sir John Colomb.—Do you think that the young men of those days were more inclined for work than they are now?—I know very well what old people could do then. They were the best workers. I know that when I wrought with my father I could do a day's work and take my rest, but I cannot take much now. I must work day and night or not be in it.

33540. Do you think the old men were the hardest workers?—Well, I don't say but they were. That is true.

33541. I mean do you consider that the old men when young were better workers than their sons are now?—Well, I do not say they were, but it was easier to make money. It was easier money; there was a better price for everything twenty years ago.

33542. But looking back to the time when you were a young man, and looking at things now, do you think fathers kept their sons more at work in the old days?—And the fathers must make them work or they won't be paid out, and the young people are more industrious than in those days, and they know that they must work at home or some place else if they must earn a shilling.

33543. Chairman.—Do you say that you got seven crops of oats from that farm?—I did, with my father.

33544. Seven in succession?—Seven in succession—one after the other. Well, that was an exceptional field in one farm.

33545. Were you altogether surprised to see the rushes?—The seventh was better than the second. I had it broken all up, one field after another. I had it broken, this particular field, and the second crop now out of the same field was not a bit better than the seventh twenty years ago. And I was talking of it to farmers, and they told me that the fifth crop of oats was better than the second. The second crop of oats, after taking two crops of potatoes out of the land, is a poor one. It is hardly worth the labour.

33546. Did you put manure into the land?—My father had only ten acres, and could not have very much manure on it, and I used to buy manure. I do have to mow a fourth of the land to have hay enough for the cattle to add to the manure I have to put on one field.

33547. There was not very much manure in those days?—No, and yet it went on producing good crops.

Apr. 25, 1907.

Mr. John M'Cabe.

33548. It went on producing those marvellous crops?—I think it was the seasons of the year that did it.

33549. Do you mean that one, two, three, four years you grew oats in the same field?—My father grew seven one after the other after two crops of potatoes.

33550. Mr. SUTHERLAND.—Was that reclaimed land?—No, it was good land; no reclaimed land would do that. I suppose they took the good out of it, and it will never be good again. The good is gone out of it.

Mr. THOMAS SMYTH examined.

Mr. Thomas Smyth.

33551. CHAIRMAN.—You come from the same side as the last witness?—Yes; from Drumbreanlis, Currigallon.

33552. You might deal with your first point, but you need not go into the question of flooding?—There are 100 Irish acres of land in Killahurk which could be used for the relief of congestion. There are 300 or 400 acres of bog land on the Maguire estate which would largely benefit the people of this locality if judiciously worked by such a body as the Congested Districts Board. Is that all I need say?

33553. I think that is all you can tell us?—Well, there is more land than that. There is a grass farm of eighty acres, the tenant of which lives at Granard, County Longford, where he has several large farms. There is another in Drumsilla which is held by a man living in the County of Cavan, and he has two or three large farms unoccupied.

33554. Yes?—I know a family who from 1868 to 1893 have received upwards of £400 from the Colonies, and with the exception of £100, this money has all gone in rent to the landlord. I can also give details of three or four other cases where remittances from America alone keep the tenants in their homes. I believe it could be clearly proved that half or more of the rents of this locality are paid by this means. This money is concealed as much as possible.

33555. What do you mean by "this money is concealed"?—The people who get this money from abroad conceal it as much as possible, and give it to be understood that it is the result of their own efforts. I knew a man six or seven years ago, who was two years evicted out of his place, and he had no title in it, and his son, a boy of 16 or 16½ years of age, went to a neighbour's house one morning, and said that his father had sent him for the loan of a pound, and he would pay it to him. And he got the pound and he went to Scotland, and sent his father some little sum of money, and got on, and from that to this that man is as safe as any other man in our parish owing to the efforts of his children.

33556. I do not quite follow that?—The man was evicted out of his place for two years, and it required getting a summons to petty sessions to clear him away, but he was let remain on it, and his eldest son, a chap 16 or 16½ years of age, rose up one morning and went to a neighbour's house, and said his father sent him for the loan of a pound, and he would pay him on Friday, and he got the pound, and when he got it he ran away to Scotland, and never went back with the pound to his father's house, and sent home some money for him, and afterwards he got out his brothers and got on in the world, and from that to this that man and his family are just as safe as any neighbour.

33557. Most Rev. Dr. O'DONNELL.—Did you say that he remained in Scotland or went to America?—No, I did not say that.

33558. He remained in Scotland?—They remained. The three boys are still away.

33559. CHAIRMAN.—They are in Scotland?—No; there are two in London and one in Scotland.

33560. They are not in Ireland?—They are not in Ireland.

33561. And those three boys continue to send money to their father?—I cannot say that, but I say that they sent him enough to make him as safe as any other man in the locality.

33562. They made up between them enough money to put their father in more comfortable circumstances?—Yes.

33564. But you say that it is concealed as much as possible?—Yes.

33565. What is the particular objection the people have?—They do not wish it to be known. I knew a man who lived in the neighbourhood of a country post office. The sheriff and his staff arrived one morning to evict him; this man asked the sheriff to postpone the eviction while he would be sending to the post office, which he did, and his messenger got in the post office a letter from the man's daughter in America, and in the letter £27, which paid the sheriff and settled the eviction. In years when this girl returned from America she told, among other things, of the £27 that was lying in the post office waiting for her father, yet in all those years her father never told me.

33566. Most Rev. Dr. O'DONNELL.—Your reply in answer to the point that Lord Dudley, the Chairman, draws attention to is that the people have an idea of keeping up their self-respect and standing in the locality, and do not wish their neighbours to know that they required help from abroad?—That is the very thing—that is the very point.

33567. Sir JOHN COLOMB.—How do you reconcile that with this—that everybody is living mainly on money from America?—They could tell you the same if they were to do it.

33568. We have been told that everybody was living on money from America, so why should there be any concealment—why did not that man tell about the money that came into his own family? You mean that they don't like to tell, though everybody knows that everybody else is living on money from America, is that it?—Yes, everybody knows.

Mr. THOMAS FLYNN examined.

Mr. Thomas Flynn.

33569. CHAIRMAN.—You appear for Father King?—Yes.

33570. Father King was not able to come?—He was not.

33571. And he asked you to come?—Yes.

33572. I think you had better read Father King's evidence?—One estate, the townland of Kilgariff, which is partially a grazing ranch, was purchased about five years ago by the Congested Districts Board, but nothing has been done as yet to relieve the congestion. Two estates have been purchased by the Land Commission under the Ashbourne Act, and two other estates are at present in the hands of the Estates Commissioners. One estate has recently been purchased by the Estates Commissioners at a price averaging from about eight to twenty years' purchase, but nothing has been done so far to relieve the congestion on this or on the other estates. This parish comprises about sixteen small estates, and the number of holdings is about 440. The whole parish is congested, and about three-fourths of the holdings are uneconomic. There are no available means other than the promotion of industries to benefit the condition of the tenants living on those holdings.

33573. Sir JOHN COLOMB.—Is this your own evidence or Father King's?—Well, it is both.

33574. Are they mixed up?—Well, we are of the one mind on this. I am of opinion that the condition of the people of this parish could be vastly improved by the following means:—The purchase of their holdings by the Congested Districts Board or Estates Commissioners, the development of the industrial resources of the district, as the district abounds much in coal and iron ore; the construction of the necessary means of transit, as the absence of railway communication obliges farmers to dispose of their products in the neighbourhood to dealers who double their money in profit by disposing of them in some of the large market towns, and the construction of a woollen factory, as this is a great wool raising district, might be the means of establishing a great industry here. Through the Congested Districts Board we got a loan of about eighty or a hundred spinning wheels in the parish, and they sent a weaver here some years ago,

who taught the weaving industry. If there was any means of pressing their cloth after it had been woven it would be a very profitable business, as this is a great wool-growing district.

33575. CHAIRMAN.—You are speaking of the congested area?—Yes, my lord.

33576. Compared with Foxford?—Yes.

33577. How about the prices?—Well, I do not know about the prices. We do not sell any of the woven stuff. We manufacture it for our own use.

33578. You do not sell?—No, because we cannot press; but they weave it themselves. It is not smooth enough.

33579. Are there many new looms?—Only one new loom.

33580. Were any of them anxious to get an improved loom?—Oh, yes. We applied to the Department of Agriculture, and we were promised them, and did not get them, and they got a weaver there, and he came once, and never came again.

33581. Yet those looms may be had from the Congested Districts Board on loan?—Yes; I am aware of that, my lord—the same as the spinning wheels. I think we have got about 100 of the spinning wheels from the Congested Districts Board.

33582. You were saying that there ought to be a woollen mill in the district?—Yes; I do not think there could be anything done that would benefit the district so much.

33583. Is there a large wool production in the locality?—Yes.

33584. And is there water-power?—Oh, any amount—the Shannon, Lough Allen, and the Yellow River.

33585. Can you give us the views of your district about the woollen mill?—We wrote to the Department of Agriculture about it.

33586. You wrote to them?—Yes.

33587. And asked them to equip the establishment?—Yes.

33588. And what was the reply?—The usual reply—that it would be considered at some future date.

33589. And have you had any further reply?—No.

33590. And have you applied to the Congested Districts Board?—No.

33591. Where does the district lie from here?—On the east side of Lough Allen, north of Drumshambo town, along the Slieve-an-ierin mountain. And we are in want of some roads. We would have no road but one only the Congested Districts Board gave us a small grant for bridges and roads. Now, we had an application put before the District Council showing that there were eighty families that could not get out there, and the District Council had no money, and the Congested Districts Board gave us £400 or £500 for one road some years ago. There were no roads in the district except one till the Congested Districts Board came in and aided the parish.

33592. Is there anything else that you want to say?—Nothing else, except migration—plenty of land available in County Leitrim.

33593. The woollen mill seems to be the principal thing?—Yes, and a larger grant to the Parish Committee. They have done a great deal of work with the very poor people. It has been a great improvement to the very poorest, and there were 90 applications for the last £70 that came, but they could only entertain 48. We are to get a larger grant this year for dairy purposes, and the making of nice dairies would be a great benefit and great encouragement.

33594. Most Rev. Dr. O'DONNELL.—You mean cottage dairies?—Yes, my lord.

33595. CHAIRMAN.—Have you a creamery?—Yes, and my opinion is that creameries are not going to stop here.

33596. That particular one?—Any of them. My belief is that they will all go away again as fast as they came.

33597. Why?—Because some of the districts are starved.

33598. Why?—You have to buy in everything. You have to buy oil-cake for the calves, some substitute for the milk, if you take and send it to the creamery, and the price of the milk. You will have to buy butter back again for the house, and the money will all go out, and you have not your calves fattened unless they are fed on linseed meal or some other substitute for the milk that is sent to the creamery.

33599. And do you not think that your milk brings you in by sending it to the creamery much better money than you had before when you tried to do it yourself?—No, I do not. I take the things in this way. If I go to the butter market and get 8*d.* a pound for the butter it will pay me far better than to get 4½*d.*—and seldom you get it—a gallon for your milk.

33600. Mr. SUTHERLAND.—You are selling good food, and you are buying inferior food?—That has hit it. It is supposed that 2½ gallons of milk will make a pound of butter. I just worked it out for experimental purposes. You get butter at, say 8*d.* perhaps, and sometimes less, and, say, 4*d.* a gallon and sometimes 3½*d.* for your milk. And you have a pound of good butter at home for that 2½ gallons and you get the buttermilk. And would not it be better value than selling the milk to the creamery at 4*d.* a gallon? Besides we have a right to inquire into these creameries. It is all a pecuniary affair.

33601. Where is the market for your butter?—In Enniskillen we sell our butter. We got 10*d.* a pound last year, and 10½*d.* for butter in Enniskillen, and seldom is it up to 11*d.* from the creamery.

33602. CHAIRMAN.—What is the most?—I only went one year—I sent it only once.

33603. Most Rev. Dr. O'DONNELL.—If you got 10*d.* a pound for your butter it would be obviously profitable to make your butter yourself?—I believe, my lord, it would be a profit for 9*d.*

33604. You make a pound of butter from three gallons of milk. If you keep your milk at home and make the butter yourself you get 10*d.* a pound for the butter, and you have the buttermilk besides. Is not that it?—Yes, my lord.

33605. Sir JOHN COLOMB.—You say the butter, if brought to Enniskillen sells for 10*d.* a pound, but there will be boxes, and you will have to deduct all the expenses?—They are very little—just ordinary boxes. Therefore at market you have only to pay for the butter.

33606. How do you send it away—in boxes?—Yes.

33607. And there is no butter wrapper used?—Only lining paper.

33608. And then you have the carriage by railway?—Nothing at all. Last year, I know, I had 57*s.* for the butter.

33609. You get 10*d.* a pound in Enniskillen?—Yes.

33610. How much do you make out your expenses? I do not count anything for expenses. Are not ordinary people working for themselves.

33611. You take it in your cart?—Yes, and churn it and all.

33612. And is there a certain day for the butter market?—Yes, Tuesday.

33613. And you have to get a cart and horse that will bring you to Enniskillen?—Yes.

33614. And surely that comes out of the profits of the butter, because it is loss of time?—Oh, the horse's time—yes; but it is counted good business.

The Commissioners adjourned.

SIXTY-NINTH PUBLIC SITTING.

FRIDAY, APRIL 26TH, 1907,

AT 11.0 O'CLOCK, A.M.,

In the Board Room, Workhouse, Mohill, County Leitrim.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Apr. 26, 1907.

Sir FRANCIS MOWATT (*in the chair*).—Before we proceed to take evidence I have been requested by my colleagues to acknowledge the receipt of an address of welcome from the poorer classes of Mohill to the Commission. I wish to say that we are very much obliged to you for your good opinion and for your welcome, and we hope quite as much as you can that the result of our inquiry may be for the benefit of the district. We have also a resolution from the Secretary of the Mohill Union that relates to the general inquiry, and I need not say that it will have our consideration with all other evidence that is brought before us in the course of the inquiry.

Rev. PATRICK NEWMAN examined.

Rev. Patrick Newman.

33616. Sir FRANCIS MOWATT.—You attend here, I think, deputed by the Leitrim County Council?—Yes.

33617. Your residence is in Mohill itself?—Yes, for over four years.

33618. If you will indicate to the Commission the particular points on which you wish to give evidence and make a statement, we will ask you whatever questions occur to us as your statement proceeds. What is the first point you wish to bring before the Commission?—I am acquainted with the district that is scheduled in this parish. It is the Breandrum Electoral Division. That is a poor district, and can be improved by the Board if they look to the drainage. It is in a bad state for the want of drainage.

33619. Speaking of drainage, are you referring to the big arterial drains?—Yes.

33620. And you would contemplate that the tenants would make their own smaller drains from their holdings if the arterial drainage of the district were improved?—Yes; they would be able to drain, I should say, if the principal drains were improved.

33621. What is the drainage at present—is it a river that runs up at the bottom of a hill?—A river.

33622. What leads to that river overflowing?—It gets choked up. Mud collects as it runs through a boggy soil. It gets choked up in the winter when the soil gets washed into the river. There would be a growth of grass in the spring and autumn when the rains are heavy, as they are in September, and the river will not take the water away. I have seen meadows covered occasionally, and the hay covered up by flooding.

33623. Is that state of affairs getting worse—is the river gradually choking from year to year, or has it always been a river liable to flooding?—It is choking from time to time.

33624. In your experience since you have been here has that got worse from year to year do you think?—I would say so.

33625. If that drainage were improved and the river put in a better state, say, by the assistance of the Congested Districts Board, have you thought at all how that would be maintained afterwards?—I consider that it would require to be attended to periodically. If put in a proper condition, then a little expenditure would be enough to keep it in condition.

33626. But your idea would be that the Congested Districts Board, or whatever authority dealt with it, should not only first of all provide the system of drainage, but should maintain it from year to year?—Yes.

33627. You don't think that would be the duty of the district or the tenants?—I think they should get help to keep the principal rivers in proper working order.

33628. Upon that system of drainage have you any further observations to make beyond bringing the subject before us as you have?—No.

33629. Most Rev. Dr. O'DONNELL.—Would it be difficult to get a sufficient fall for the improved drainage?—No; the fall is good enough.

33630. It is a question of work?—Yes.

33631. You would desire that some such body as the Congested Districts Board would have efficient authority to improve drainage of that class?—Yes.

33632. You are aware that there are many legal difficulties in the way at present. Do you know that as the law stands it is exceedingly difficult to get drainage promoted in the country?—Yes.

33633. Besides the river drainage, what about field drainage?—That would not be so difficult. The individual tenants could attend to that if the main drains were in proper working order.

33634. Do you think it would be a public advantage if there were some facilities to enable industrious tenants to obtain loans at reasonable interest to drain their own farms?—I think it would be an advantage to the individual farmer.

33635. Sir FRANCIS MOWATT.—Are you speaking of a hillside district or of a flat district?—It is varied. There is hill and there is valley.

33636. But part of the river runs through flat country?—Yes.

33637. Most Rev. Dr. O'DONNELL.—If these field drains were constructed in your district into a proper main drain, do you consider that the condition of the farms would be greatly improved?—Yes.

33638. You consider that the farms would be improved by such drainage?—They would.

33639. Until such drainage is carried out it is difficult to encourage agriculture to any considerable extent?—It is.

33640. Is much of that poor district to which you refer flooded as you describe?—Not very much, but I have seen considerable quantities of hay and meadow flooded from time to time.

33641. Is there a fairly large population still in the district?—Fairly large; the old people and the very young. When they get up to manhood they have to leave. They cannot get work at home. There are no industries; their own farms are small; they are not required, and they have to go away to get work to help the people at home to keep their homes.

33642. Do you consider that if arterial drainage were promoted as you suggest there would be more agriculture and more employment?—I don't know if

there would be more agriculture, but it would be more profitable.

33643. To whatever purpose the land was turned it would be well to have it drained?—Yes.

33644. Sir JOHN COLOMB.—There has never been any attempt made in this district to deal with the main drainage you speak of?—There has been a little done.

33645. Whom was that done by and when?—There was some done this spring. I don't know who got it done.

33646. There was an improvement made to a main drain?—Yes. I saw a main drain cleaned.

33647. There has been no new work done within your knowledge?—No new drain opened.

33648. Do you think that where the land abutted on the main drain the people in combination could clear the drain, each his own bit?—It was not done in that way, but I saw some people from the neighbourhood working as I passed, but I don't know who had them working.

33649. I presume if a main drain were made for the benefit of a half-dozen tenants whose land it passed through it would be a reasonable thing to expect that each tenant benefited by that main drain should afterwards keep it clear each season?—It would be reasonable that they should contribute towards it.

33650. I mean to clear it—if it gets choked with weeds and rushes, each tenant profiting from the Congested Districts Board having made this drain should undertake every year to clear it according as required so as to keep it in working order?—I would say that if there were a very heavy expenditure it would be hard to expect them to incur it in part, and it would be reasonable to give them some help.

33651. Suppose it meant a week's work for each tenant, would you think that too heavy?—I would not.

33652. Much would depend on the nature of the work and what was required to be done?—Yes.

33653. If it was a question of each tenant giving a week's work to maintain his particular part of the main drain you would think it quite reasonable that the Congested Districts Board before doing the work would make and insist upon that agreement?—Yes.

33654. Sir FRANCIS MOWATT.—What is your next point?—Part of this Breandrum Division is very much in need of roads, and tenants should be assisted to get a road in that large district where they have no road passing through.

33655. No road or no good road?—There is no road. In the winter season I don't know how the poor people get market produce in or out.

33656. Where do they find their market?—In Mohill. *Apr. 26, 1907.*

33657. How far have they to go without a road until they touch the road coming into Mohill?—Their furthest point from a road would be about an English mile. Rev. Patrick Newman.

33658. Is it that mile of road you are thinking of?—The road I would say that would benefit the locality would be over two miles.

33659. Most Rev. Dr. O'DONNELL.—I suppose they can scarcely bring in carts to the fields at present?—In the winter season it is impossible.

33660. So it is not easy for them to use a horse and cart?—No. Only one tenant in the district possesses a horse and cart.

33661. But if there were a road, probably others would have a horse and cart?—I don't know that they would. The holdings are small.

33662. Sir FRANCIS MOWATT.—Has the district ever applied to the Congested Districts Board for assistance in the matter?—Not that I am aware of.

33663. Nor to any local authority?—I think they applied to the District Council to have a road made.

33664. Do you recollect what answer they got?—No.

33665. It was not pressed upon them very strongly or you would have recollected?—They have the Cavan and Leitrim Light Railway to contend with. They would have to put up a gatehouse, and they objected to the expense.

33666. They objected not on the ground that the road was not required, but that they could not raise any money to help you?—Yes. They are very much in need of this road. It is very difficult to get through in winter. It is not difficult to make the road. It is a question of price. You could not walk through it in winter.

33667. Most Rev. Dr. O'DONNELL.—The road is required to enable the people to bring produce to market, manure the lands, and bring home the turf?—Yes. They have the turf near them. In every other respect it would be an advantage. They find it very hard to bring out pigs, cattle, or anything to market. With regard to hay, I was recently speaking to a man in that district, and he said, "If you don't happen to have hay enough for your cattle you cannot get it in here." He said, "We must sell our cattle before the winter comes; we must have the amount of hay that the cattle require."

33668. Have they very small holdings along this particular district?—Fairly large. I don't know what the acreage would be.

Mr. THOMAS F. SMYTH examined.

33669. Sir FRANCIS MOWATT.—You represent the Mohill District Council?—I am the member of the Mohill District Council, and I am the Parliamentary representative of South Leitrim. In Mohill Union there are twenty-three electoral divisions. Of those twenty-three electoral divisions there are only ten scheduled as congested. The remaining thirteen are unscheduled, although, as I have personal knowledge of the whole district, there is as much poverty in the thirteen districts non-scheduled as in the ten that are scheduled. Mr. Thomas F. Smyth.

33670. Is it certain large holdings, or what we call enriching areas, which have led to the thirteen not being scheduled?—The large holdings raise the general valuation per head of the population.

33671. Although a very large number of the holdings are very small indeed?—Yes. In the Mohill Union there are 3,205 holdings under £4 valuation, 2,519 over £4 and under £10, and 883 over £10 and under £25, and only 141 over £25 valuation in the whole Mohill Union.

33672. Mr. SUTHERLAND.—Have you any suggestion to make as to how the exclusion of these divisions can be remedied—you know that the definition is statutory?—I have practical experience of the whole of South Leitrim, and there is not a single portion of it, as far as I know, that should not be scheduled as congested.

33673. Sir JOHN COLOMB.—You are at present engaged in representing to the Commission that the standard of congestion is fictitious?—Yes. The whole of South Leitrim should be scheduled. The poor law valuation of the Mohill Union is £40,000. In that valuation the following towns and villages are included: Mohill, Dromod, Cloone, Carrigallen, Fenagh. There are six divisions of Carrick-on-Shannon Union in my Parliamentary constituency of South Leitrim. Only one of those divisions is scheduled as congested. That is Gortnacullen. Those six divisions cover an area of 26,931 statute acres. The poor law valuation is £16,493, according to a return supplied to me by the clerk of the Carrick-on-Shannon Union, Mr. O'Connor. Dealing with this particular district then, according to this return so supplied to me, there are 487 holdings under £4 valuation, 650 over £4 and under £10, 308 over £10 and under £25, and ninety-six over £25. Those divisions also include the towns of Carrick-on-Shannon, Drumsna, and Leitrim. That will account for the larger unions. There is a portion of Bawnboy Union in the Parliamentary constituency of South Leitrim, but I am very sorry that I have not been able to get the figures as to this portion of my constituency, though I wrote endeavouring to obtain them.

33674. But you know the district practically?—Yes. I know from going through the districts that as much congestion prevails in those districts as in any of the districts scheduled as congested.

33675. Most Rev. Dr. O'DONNELL.—We have got an actual return for each division of the number of holdings under £4 and under £10 valuation?—Of course I have a fairly good knowledge of the district, as in addition to being a District Councillor for

Apr. 26, 1907.

Mr. Thomas F Smyth.

Mohill, and representing the division in Parliament, my business as an auctioneer brings me into contact with the small farmers of the district as regards selling meadows, selling farms, agricultural produce, and things like that; and not alone does this whole Mohill Union need to be scheduled as congested, but the whole of South Leitrim. I don't think there is a bit of it that I could take out. The divison comprises the Mohill Union, six divisions of Carrick-on-Shannon Union, and five or six divisions of the Bawnboy Union.

33676. Mr. KAVANAGH.—Have you any suggestion to make as to the alteration of that definition of congestion which would bring in the whole of South Leitrim?—From the existing circumstances, the number of small uneconomic holdings, and the disadvantages suffered in many ways, the poverty in South Leitrim is such that the whole division should be scheduled.

33677. But you know the present definition of congestion?—Yes. That is, dealing with holdings under £7.

33678. Most Rev. Dr. O'DONNELL.—It comes pretty close to that—thirty shillings per head of the population?—I suppose so.

33679. Mr. KAVANAGH.—You have no suggestion to make as regards an alteration in the definition?—No.

33680. Most Rev. Dr. O'DONNELL.—But you do say that the authority dealing with congestion should be able to deal with it wherever they find it?—That is the suggestion.

33681. Mr. SUTHERLAND.—Are you willing to go that length?—Yes.

33682. Would you, in your place in Parliament, support an amendment to give whatever body is in charge of the work of relieving congestion, discretion to schedule what is necessary?—Yes. I would be glad to give a vote to have all South Leitrim scheduled.

33683. You understand that there must be a general definition applying to the whole of Ireland, and that you cannot separate South Leitrim?—I quite understand that.

33684. Mr. KAVANAGH.—You would rather schedule your whole county than enlarge the present area of congestion?—Yes. Not alone does South Leitrim require to be scheduled as congested, but different other parts of Ireland. For instance, part of the County Longford—I know a good deal of it in business relations—should be scheduled as congested, but is not. It does not apply to Leitrim or Connaught alone. It applies all over.

33685. Sir JOHN COLOMB.—Do you apply that observation of yours from your knowledge of special spots in Longford or to the whole of it?—To special parts of it.

33686. Could you indicate to the Commission the special parts of Longford that struck you in that way?—Portions in the vicinity of Killough, Ballinamuck and Drumlish.

33687. Most Rev. Dr. O'DONNELL.—Around Drumlish the holdings are pretty small?—Particularly small and uneconomic. There are different parts of South Leitrim where there are large tracts of bog and marshy land, and it would be a very good thing if they could be drained and planted with timber. They are not fit for any other kind of crops.

33688. Sir FRANCIS MOWATT.—When you speak of the drainage, are you alluding to what I may call arterial drainage?—To arterial drainage, and the drainage of small holdings by the farmers themselves.

33689. Would not you say if the arterial drainage were carried out wholly or partly at the public expense, the holder might very well be asked to make his own drains through his holding into the arterial drainage?—Yes. The great majority of them would be quite satisfied to do that. In some cases there is not fall for the water.

33690. Sir JOHN COLOMB.—Suppose the Congested Districts Board made a cut or arterial drain, would you think it right that the tenants on their part should undertake to keep it clear?—Yes, and if they all did it in a body it would only amount to a small portion of work, but it generally happens that what is everybody's business is nobody's business, and the thing might not be taken up in the spirit that it should.

33691. That is the point, and as a business man do you think that, having given several tenants the advantage of arterial drainage, and having made the necessary capital outlay, it would be quite reasonable for the Board to have some power to compel the holders who are benefited to do the work in future?—I quite agree with that suggestion.

33692. Most Rev. Dr. O'DONNELL.—You agree that there should be some organised effort to maintain the drainage?—Yes.

33693. Sir JOHN COLOMB.—On the principle that what is everybody's business is nobody's business, do you want some central authority?—Yes, to insist that it should be done, and I believe, speaking of the farmers of South Leitrim, and of the parts of the country that I know, that if they got these facilities they would be glad to avail of them as far as they could.

33694. I suppose you corroborate the previous witness, Father Newman, that there are places in this district where the tenants and agriculture suffer severely from the want of arterial drainage?—Yes. Living at home, I see my father's land, and other people's in the district, flooded. There was no fall for the water. South Leitrim is about one of the wettest districts in Ireland. You have rain here when it is in no other part of Ireland.

33695. Are there any official figures of the rainfall—does anybody keep rain gauges—can it be established that there is more rain here?—Yes. Mr. Lauder, of Lauderdale, has a rain gauge, and other gentlemen round about have them, too. A great deal of the land is very shallow, and wholly unsuited for grazing and meadowing, and only for the great care the small farmers bestow on it it would be impossible for it to produce crops at all.

33696. Sir FRANCIS MOWATT.—That is the land of which we have heard evidence during the last few days—the depth of the soil varies from 4 and 5 inches to 9 and 10 inches?—Yes, and in some cases it is practically less than 4 or 5 inches, and I believe that the cause of the burning of farms is that the people had no manure, and they used to burn the land to make manure to have ashes for it. It was the means of reducing the land to a great extent.

33697. Upon those lands to which you refer, the cultivation by the tenant is for grass growing?—Yes; only for the great care they give to some of the land, in shallow places not fit for grazing and meadowing, they would not knock any crops at all out of it. They are not able to carry grass or meadow. I have great experience of what the land is from letting small farms and meadows, and things like that.

33698. What comes below—not rock?—Blue clay in a great many cases.

33699. In cutting drains the blue clay is not porous at all?—It is not porous.

33700. On the other hand, would you leave the drain an open drain—I suppose that that blue clay makes a very good permanent ditch—it does not fall in at all?—Yes.

33701. You cannot fill it with stones?—Not very well.

33702. Therefore, if it is an open drain, when it gets through 4 inches of soil, it is a very good drain for carrying water off?—It is a very good drain.

33703. It has to be left open?—Yes.

33704. Most Rev. Dr. O'DONNELL.—One can readily understand, as far as field drainage is concerned, the loans would be to the occupiers?—Yes, from the Board of Works.

33705. From your experience and observation, how would you suggest the carrying out of main drains or arterial drainage, drainage on a large scale, either the deepening of rivers or the making of main drains?—If the Congested Districts Board, or some other body like them, could be empowered by Act of Parliament to give loans for the arterial drainage of a district it would facilitate very much, and also when they would get those powers they should get further powers so that the farmers could avail of the arterial drainage, and would drain their holdings and keep it up.

33706. Sir FRANCIS MOWATT.—You say power should be given to make loans; is it loans to any local authority?—To make loans on a large scale.

33707. Most Rev. Dr. O'DONNELL.—Which of these two would be the better course, the Congested Districts Board or a public body like that to make the drains,

or to advance the money to, say, the Rural District Council, so that the drain would be made by the local authority?—I don't know. Either course would be equally good. I don't want to give a preference to one course over the other. It would be a better thing to advance money to small holders. Unless you have arterial drainage carried out in a great many districts it would be practically useless for individual farmers to go on draining farms of land. There is no fall for the water.

33708. One can understand that if a district were large it could not be dealt with by one District Council?—No. It could not.

33709. You should deal with two?—Or three. sometimes. There are portions of three rural districts in South Leitrim—Mohill, Carrick-on-Shannon, and Bawnboy.

33710. More than that. Take the boundary between Leitrim and Longford; if drainage was being done there it might be necessary to deal with two County Councils?—Yes.

33711. Does not it look as if there should be some authority over the whole country or over large sections of the country in general control of this class of work?—Yes.

33712. You are aware that at present when people ask to have drainage promoted they are generally told to form a Drainage Board?—Yes.

33713. Do you know that that is a very expensive and troublesome course?—Yes. It is rather expensive to get it incorporated.

33714. You could scarcely get a locality to take up that organisation?—In poor districts it might come very heavy on the people. People who have bought out their holdings, as happened in many cases in South Leitrim, have to pay drainage rates. Some of those tenants, although they got a reduction when they bought the land, practically gained nothing as they have to pay a drainage charge. The occupiers of the farm, having bought it from the landlord, have to pay drainage rates. I have known cases where a number of tenants got a reduction by buying their farms and it went afterwards practically to pay the drainage rates.

33715. In making the bargain they scarcely adverted sufficiently to the incidence of this rate when they became purchasers?—They did not know that it existed, or that they would be liable to pay these rates. Generally the landlords pay the drainage rates until the estates are sold, and then they fall on the individual occupiers.

33716. Sir Francis Mowatt.—You are not speaking of a rate imposed after the tenant purchased his holding, but of a rate which existed when he purchased his holding?—Generally the landlord has to pay off the drainage rate.

33717. Most Rev. Dr. O'Donnell.—You are speaking of a rate which is being paid by the incoming proprietor?—It was for grants made afterwards for the construction of a drainage board.

33718. I thought you meant that when they purchased their holdings they had not adverted to the fact that they would have to pay a drainage rate?—No. The landlord would have to pay that; but as a rule you will find that people who are living on properties as judicial tenants are more anxious for those drainage boards to be got up than tenants who have purchased, because tenants who have purchased have to pay drainage rates.

33719. If this drainage were undertaken on a large scale by a public body, from what you say of the natural reluctance of tenant purchasers to add to the rates and bring up the instalments almost to the amount of the preceding rent it would look as if it would be necessary that the body promoting this drainage should not expect the whole of the expenditure back again?—No.

33720. Some of it should be a grant?—Yes.

33721. Mr. Kavanagh.—There has been a Commission sitting on this subject lately?—Yes.

33722. Was any evidence given from this locality before that Commission?—I think Mr. Wallace gave evidence as representing the County Council.

33723. I presume all this evidence was brought before them, too?—It was.

33724. They have already reported?—Yes. I saw the report issued a week or two ago. The want of roads in many districts is very marked. It is with great difficulty that the people get in and out of these districts. Roads are required to be made by the Congested Districts Board or by some other body, because at present the County Council or the different Rural District Councils have no power to make those roads. They are practically one-end roads going into the country with no outlet for them. I may say also as a member of the Mohill District Council that even if the County Council or District Council have powers to make roads the local public authorities would be rather reluctant to make too many new roads. At present the rates are very high. This portion of Leitrim is in the guaranteeing area for the Cavan and Leitrim Railway, and the rates for that are now a shilling in the pound, and sometimes go up to two shillings; so that the County Council and the District Councils as custodians of the ratepayers' money don't wish to increase the rates further if possible; but in any case they have no powers to make those one-end roads

33725. Sir John Colomb.—They could get power from the Local Government Board if they applied for it, but then remains behind your objection about the taxation?—Yes. There is a reluctance to increase the rates, especially on account of the burden caused by the Cavan and Leitrim Railway.

33726. Sir Francis Mowatt.—A general recommendation is that there should be more roads throughout your constituency?—Yes, because I have extensive knowledge. I often went selling meadow in different districts, and very fortunately brought a bicycle, because if I brought a trap or a car I could not get into the districts at all. I know of many different districts where roads are required to be made.

33727. Is it your proposal that the expense of those roads should fall wholly on the Congested Districts Board?—Partly, I would say. I would not expect the Congested Districts Board to do too much. They or some body like them should bear a portion and let the rates bear a portion.

33728. There again you don't express any opinion as to whether the roads should be actually constructed by the lending power or by the local authority?—It should be constructed by those bodies and maintained afterwards by the local body.

33729. Most Rev. Dr. O'Donnell.—It is easier for the local body to undertake the construction of a road than of a drain?—It would.

33730. The legal difficulties are not so great?—They are not.

33731. Don't you think as regards these accommodation roads the men who would be benefited could give a large contribution in labour?—They would if they were employed to do it. There are many cases where small grants were given to Parish Committees by the Congested Districts Board, and they gave a great deal of labour.

33732. You have referred to tree planting?—In districts where there are bogs and marshy lands it would be very well if trees could be planted on them.

33733. Planted for shelter or for improving the land or for timber purposes?—For all three reasons.

33734. Sir John Colomb.—You say districts with marshy land; but as regards marshy land would it not involve a considerable outlay for drainage of that land to make it so cease to be marshy as to be fit for planting?—Yes, it would. It should be drained before it was planted

33735. Do you anticipate from planting these areas that they would ultimately be in any sense remunerative?—They would as far as timber purposes are concerned, because timber is getting very scarce in the district now.

33736. Is the turf getting scarce?—In some districts it is; but taking it all over there is a good deal of turbary in South Leitrim. In some districts there are large quantities, and in some districts it is very scarce.

33737. You advocate planting I suppose for shelter for the general improvement of the country?—Yes.

33738. Do you think that ultimately it would be remunerative by reason of there being so little timber in the country?—Yes, and it would leave the land that it would not be so damp, and would have a beneficial effect on the health of the community, as unfortunately consumption is rather prevalent in portions of this district.

33739. Sir Francis Mowatt.—That implies very extensive planting I expect?—Particularly in this district.

33740. You were saying that there was very little

Apr. 26, 1907.

Mr. Thomas F. Smyth.

timber in Leitrim. Is there any timber in the commercial sense: is anybody growing plantations of larch or fir for commercial purposes?—With the exception of some of the estates—I think I am right in saying Mr. Clements—no timber is sold except for thinning out plantations. Very little timber is sold for commercial purposes. Lord Harlech's district is the only district I know where timber is sold for commercial purposes. It is in the Mohill Union, near Dromod. It is only sold to small local carpenters, who buy a few trees. It is not sent away, only just on a small scale.

33741. Sir JOHN COLOMB.—You contemplate draining marshy ground in order to plant it?—Yes.

33742. Having gone through the process and incurred the expense of making that land cease to be marshy, do you think that planting would be the best way of getting value afterwards?—I believe so.

33743. Rather than grazing?—I believe so.

33744. Sir FRANCIS MOWATT.—You contemplate the planting of lands now held by tenants?—Yes.

33745. Not the mountain sides that are of little use?—I certainly think that there should be some planting on the holdings of the farmers themselves, both for shelter and variety, if you like, and that they could have some timber for their own individual estates, as well as doing it on a large scale.

33746. Most Rev. Dr. O'DONNELL.—Apart altogether from large plantations, don't you think it is a fact that on almost every farm there is a little angle of land practically disused which might with great advantage be planted with a shelter belt of trees?—Yes. Unfortunately there is a great tendency on the part of some of the farmers instead of planting trees to cut them down. There is no tendency to plant, so that there should be encouragement by a large system of planting.

33747. Don't you think if that system were put in practice on a large scale there should be a public authority to encourage the necessary care of the young plantation?—Yes, and to protect it. Unless it is well fenced it will almost immediately disappear.

33748. Sir JOHN COLOMB.—Have you observed at all where land has been transferred from landlords to tenants there has been more tree cutting where there have been trees?—I think as a general rule they are twice as anxious to cut the timber when it belongs to the landlord, because they think they are paying dear enough for the land and wish to have every benefit that will accrue from the land.

33749. Sir FRANCIS MOWATT.—When it has passed from the landlord to the tenants?—They regard it with greater care, except in odd instances.

33750. The tendency to cut could only be altered by educating the public opinion of the district?—Yes.

33751. Sir JOHN COLOMB.—Do you consider that there ought to be some process of instruction to instruct the people in remote districts as to the great necessity of trees and the great necessity of preserving them when planted?—Yes.

33752. Mr. SUTHERLAND.—As in the case of drainage you will admit that the success of this would be largely a question of the machinery by which it is carried out?—Yes.

33753. What way do you propose that planting should be carried out on a large scale?—Some body like the Congested Districts Board should have power to do it, and make grants for it. If they plant a district let them have the profits of it. Afterwards they could appoint some people as trustees to look after it and see that the trees and shrubberies were not interfered with in any way.

33754. Sir JOHN COLOMB.—Whose property would the trees be?—I should say they should belong to the Congested Districts Board, and they would appoint trustees to look after them.

33755. A certain amount of land would be taken away from grazing for a period of twenty or thirty years. Would the farmers, the new purchasers, be willing to give up that?—The small farms of the occupiers in Leitrim would not permit of their giving up land, but it is the boggy and marshy districts that I refer to.

33756. They are in some person's possession?—Yes, in a great many instances they are attached to a farm of land.

33757. Would the people be willing to have their land withdrawn from grazing for a number of years?—That is a question I cannot answer.

33758. Have you any idea of what it costs per acre to plant trees?—I would say it would cost £50 per acre to plant.

33759. Would you put it at anything like that?—That includes the drainage for the Irish acre.

33760. You must allow a tremendous sum for drainage?—There would be drainage and fencing in and general improvements and maintenance for some time, and the paying of the man in charge.

33761. I am surprised you put it so high, because with only surface drainage it should be done for about, say, £10 per acre?—I would be delighted if it could be done at that.

33762. Most Rev. Dr. O'DONNELL.—There is only too little experience in that line here to know much about the cost?—Yes. In some cases where farms of land are sold I would advocate that they should be bought and the small holdings adjacent should be made larger.

33763. Sir FRANCIS MOWATT.—When holdings come into the market in the natural course they should be bought by the Congested Districts Board or some other board to enlarge small holdings?—Yes.

33764. You limit your recommendation to holdings which come into the market in the natural course, or are you contemplating anything like compulsory purchase of non-residential land?—No, but, for instance, some four or five years ago the Jones Estate was sold in proximity to small farms, and if that had been bought by the Board and cut up into small holdings it would make the small holdings more profitable. I know of my own experience from selling farms as an auctioneer there may be a good farm of land sold, and round about it are small uneconomic holdings. If those farms were bought to enlarge the holdings of the adjacent holders I think it would improve the position of the small farmers in question.

33765. That is to a certain extent done now by the Congested Districts Board?—Yes, but we have no experience of them doing it in Leitrim.

33766. At all events that is what you contemplate?—Yes.

33767. Sir JOHN COLOMB.—Do you mean in cases where the land tenanted and untenanted is held by the landlord, in case of properties that have not been transferred to the Congested Districts Board?—The only reason I referred to the Jones Estate was that it was a large estate. I would suggest that when the owners were selling an estate like that they should be split up into farms and sold; those farms, I would suggest, should be bought by some board that would send down a surveyor to apportion it to the small or uneconomic holdings and make them larger.

33768. Sir FRANCIS MOWATT.—That is on the assumption that they could agree with the vendor as to the price at which they should buy?—Exactly.

33769. Sir JOHN COLOMB.—You mean that the Congested Districts Board or other authority, hearing that the property was going to be sold, should by private arrangement come in, or that they would go in and bid at a public auction against bidders?—If they could secure it by either public auction or private sale I think it should be done.

33770. Take the case of a property having been bought by the Congested Districts Board and striped into economic holdings, still leaving some uneconomic holdings in the locality undealt with. In the course of time the occupier of one of these new holdings, from one cause or another, wishes to sell it. Would you give the Congested Districts Board the right of pre-emption?—I could not say as regards that. Naturally, they would have some authority over it when they would buy it.

33771. The Congested Districts Board having bought a property and done their best with the untenanted land, apportion it the best way they can, are forced by reason of the quantity of land being insufficient to leave some uneconomic holdings in that neighbourhood. In the course of time one of these new tenants, for one reason or another, wishes to sell. My point is, in view of the uneconomic holdings being still in the district, would you give the Congested Districts Board or any authority power to exercise the right of pre-emption with a view to enlarging those small holdings in the neighbourhood still remaining? It is a thorny question, and I don't wish to press it too far, but when we get a witness like you we wish to get all the information possible?—I don't approve of the principle of pre-emption. Often if a landlord wishes to buy a holding from a tenant the Land Commission will determine the

value. That may be the value of the land according to the Land Commission, but I have known cases where the right of pre-emption was exercised, and if the tenants were allowed to put it in the open market they would have got more by competition for it.

33772. Sir FRANCIS MOWATT.—You observe that that opens the way to their getting back again into very small holdings?—Yes, it does, but there was another point, and that was where the Congested Districts Board would have any power over a tenant, if that tenant wishes to sell his farm of land in the ordinary course of events, the incoming tenant should be bound to the Congested Districts Board in a similar capacity to what the selling tenant was.

33773. Sir JOHN COLOMB.—He would be, naturally, until the sixty-eight and a half years expired?—Yes.

33774. It is while the sixty-eight and a half years are running. The holding might be bought by a man from another county. There are uneconomic holdings in the neighbourhood. Would you give a power of pre-emption to the Congested Districts Board or the authority dealing with congestion?—I would not give them the right of pre-emption absolutely unless there was some power to fix the price.

33775. Most Rev. Dr. O'DONNELL.—Sir John has thinned the case down to very special circumstances?—Yes.

33776. It is with the object of relieving congestion that Sir John contemplates this pre-emption being exercised. It would be in the following circumstances. Suppose the Congested Districts Board buy an estate, and that on it there was a tract of grass land, and that in the improvement of this estate one of the small holders got a considerable tract of this land at a moderate price, or at a price a good deal under the market price, and that there was not enough of land to go round all the uneconomic holdings in the locality, the point then is this: whether any restriction should be put on the man whose holding was enlarged as regards sale, so that, for instance, he would not be free to sell his holding to a neighbour who might have a big tract of land, but be bound to surrender it to the Congested Districts Board at a price, no doubt, which they would name in the first instance, but in reference to which there would be an appeal to a higher tribunal in case the tenant did not consider it fair. You would not think that in these special circumstances some such provision would be very unreasonable?—It would not, as long as the tenant or the Congested Districts Board would have the right to appeal. It would end by arbitration.

33777. The right of pre-emption would be retained with the object of preventing this land passing away from the possibility of serving for the relief of congestion in the locality?—I quite approve of that.

33778. Sir FRANCIS MOWATT.—It follows from that that the court of appeal, whatever that was, would in fact, have compulsory power on the tenant to sell at the price fixed?—In the event of sale.

33779. The Congested Districts Board and the outgoing tenant being at variance with regard to the value of the land, there would be an appeal to the court or whatever the authority was who would have the right to compel the tenant to accept the price which the court of appeal fixed?—Yes.

33780. Sir JOHN COLOMB.—This is what is done in the case of the landlord exercising the right of pre-emption. The court settles that?—Yes.

33781. Mr. SUTHERLAND.—You have compulsion already?—You have, as far as the judicial tenants are concerned.

33782. Mr. KAVANAGH.—Would you approve of the occupation interest being fixed at the time of sale—that is when the farm is bought from the Congested Districts Board, would you approve of the occupation interest being fixed at the same time, so that the man would know exactly before he was selling his interest what he was going to get?—Yes.

33783. And in every case in which a purchase from the Congested Districts Board was carried out the occupation interest should be fixed at the same time?—Yes.

33784. You think that would clear matters?—It would.

33785. Sir JOHN COLOMB.—Have you got in your mind that that was the position created by the original 1881 Act, and that that was afterwards abandoned?—Yes.

33786. Most Rev. Dr. O'DONNELL.—In the constituency of South Leitrim are there grass lands that might be used in the event of a sale from the landlord to a tenant for the enlargement of small holdings?—In some cases I know the landlords have large grass farms which they occupy themselves and let for grazing. I don't know whether they are willing to part with them or not. I think they would if a sufficient price were paid. Some of the landlords might want a rather high price, but I believe it would be easy to deal with them.

33787. You say grass lands in such circumstances ought to be bought by a public body like the Congested Districts Board for relieving congestion by the enlargement of small holdings?—Yes.

33788. If there were small holdings that needed enlargement, and the lands could not be obtained by voluntary arrangement, do you think the public good would require the exercise of compulsion?—I think they would in existing circumstances.

33789. You are not speaking of demesne lands?—Farms attached to demesnes, held outside demesnes.

33790. Held by the owner, on which he puts cattle, or on which the eleven months' system prevails—is that so?—Yes.

33791. Let us come to other lands. Are there large farms of grazing lands held by tenants within the bounds of your constituency?—Not that I am aware of.

33792. Are there not tenants having grazing land valued at, say, over £100?—I am not aware of any.

33793. At the same time, I dare say you are familiar with the fact that in many parts of the country there are these farms?—I am quite aware of that—in Roscommon and other places. I know the particular districts and places where they are.

33794. In the same set of circumstances and for the same purposes as you would apply compulsion if the land were held by the landlord, would you apply compulsion also in the case of non-residential tenants?—I would.

33795. If the tenant is resident and lives by his land how would you act?—All the land that would be attached to his holding I would leave to him, no matter how large, but where he goes outside that residential holding it would be different.

33796. You have gone over land of various classes, and now we have arrived at residential holdings. Suppose the holding is very large, and that it is grazed, and that unless it is taken there is no other land to relieve congestion; suppose, also, if it be taken the tenant is adequately compensated, do you think does the public good in no circumstances require that a portion of it should be taken for the relief of congestion?—Except it was extremely large I would not approve of that. I would leave it to the residential tenant unless it was very large.

33797. If the man's usual means of living were trenched upon there should be compensation?—Certainly.

33798. You would apply the same principle all round?—Certainly.

33799. Sir JOHN COLOMB.—Say a farmer bred and born upon a farm works that farm partly in grazing or altogether in grazing, or in whatever way he thinks pays him best, and lives upon that farm. Next door to him there has been a farm without any house upon it worked upon the eleven months' system or otherwise, and he, out of the profits of his industry, has bought that farm adjoining him, which has been a separate holding, would you exempt him from compulsion and treat the whole place as one farm: would you consider him residential in reference to both?—I would not. He has had an addition to his residential holding, and I certainly say he should get compensation for it, and have it divided among small farmers to make their uneconomic holdings larger and more profitable.

33800. Sir FRANCIS MOWATT.—You say that if a man having a holding buys another and amalgamates the two, you would not regard the two together as one holding?—I don't think Sir John Colomb said the two holdings amalgamated.

33801. Sir JOHN COLOMB.—They are so far amalgamated that to the man they are part and parcel of his holding. In the poor rate books they are separate holdings, because that is the custom; but my point is that to the man they are one holding, because he works them in and out. It is adjoining him. He lives on the adjoining holding on the other side of the fence?—Certainly if it had been put in

Apr. 26, 1907.

Mr. Thomas F. Smyth.

with his land, and he was paying on one rent receipt and on one poor rate docket, I would not ask to disturb him then, but so long as he held on different rentals and paid on different poor rate receipts, I would certainly say that that farm is not a residential holding, but he should be compensated for it to enlarge the farms of the small holders.

33802. The misfortune of that man would be that they were for the purposes of administration, etc., separate holdings, but in reality were one farm to that man?—Some men if they have twenty farms will regard them as one holding. They will say that it is their land.

33803. Say I am a farmer. My late father has got his farm up to a certain pitch of perfection. I want an outlet. A holding adjoining me comes into the market. I have bought it and I work the two holdings as one holding. Obviously the holdings in the books must be kept separately, for they are under two different landlords: I ask you am I to suffer merely from the fact that for the purpose of book-keeping and so on they are to be kept separately?—No, but as I said before, and I cannot make it clearer, I would not touch the residential holding that you were living on; but so long as the other only adjoined his farm you could not regard it as a residential holding.

33804. Let me take another case, because we have had some extraordinary evidence on this point. Say a small man in a village or town works his way up to be a shopkeeper. He by his industry and attention accumulates capital. A grazing farm two or three miles off comes into the market, and he, rather than send his capital out of the country, buys that farm. His business is in the town, and he has to live in the town, but he has this farm, and he may have it in his mind some day to build a house for his son there, but as a result of the man's own industry and work he has acquired that farm: would you take that farm from the shopkeeper?—I would not, provided it was not a very large tract of land, and that it was what you would call a small farm.

33805. Then you draw a limit to the application of compulsion in acquiring non-residential holdings by the extent of them?—Yes.

33806. Do you think in your mind the limit would be 100 acres?—Yes, I would say that, any way.

33807. Though the congestion around that farm was very severe, if it was under 100 acres you would not touch it?—Not except it went to a public auction. Then let the Congested Districts Board give the fair value for it.

33808. If it was below 100 acres you would let it go to a public auction?—Yes.

33809. And let the Congested Districts Board compete?—Yes, and give a certain price on it.

33810. Suppose another shopkeeper bids higher than the Congested Districts Board?—Let him have it. I would not consider that the Congested Districts Board or any body should buy a farm of land at what you would consider above the value of the land.

33811. Mr. Sutherland.—Why are the two farms in the case supposed by Sir John Colomb entered as two separate subjects in the rate books: why is not all the land held by one man entered as one subject?—I don't know. A man may often be in the rate books for five shillings for a portion of bog, and a man not exceeding twenty acres has often over three or four rate receipts.

33812. Does that point to the fact that at one time all these were separate holdings?—Yes.

33813. Is that really the reason for it?—Yes.

33814. Sir John Colomb.—Is it not the case that under Griffith's valuation every holding became stereotyped as to its value for taxation?—Yes.

33815. These holdings were fixed in the fifties for taxation purposes, and that is the only reason why the holdings are now rated separately even in cases where they have been amalgamated with others?—Yes. Of course it would be much more convenient to have them all in one. It would save much time, labour and expense.

33816. But it points to the fact that all these holdings were separate at one time, and that since then they have been amalgamated?—Yes.

33817. They are no indication of the consolidation that has gone on?—Yes.

33818. Mr. Kavanagh.—When all is said and done, do you think it is possible to lay down any hard and fast rule as to the compulsory acquisition of land?—I don't think you can under present circumstances lay down a hard and fast rule. You would require legislation.

33819. Don't you think it would be better to leave to whatever Board is going to carry out this scheme of amalgamation a certain free hand to use its powers?—Yes; to use its own discretion.

33820. And no hard and fast line could possibly be laid down?—It is not possible under present circumstances.

33821. Sir Francis Mowatt.—You use the phrase hard and fast line as applicable to all the conditions attaching to the holding, and you mean no hard and fast line as to particular area or the quality of the holding. It is as to the general conditions of the locality and the land that you would give to the authority discretion as to compulsion?—Yes.

33822. Mr. Kavanagh.—The general circumstances of each case?—Only where there would be uneconomic holdings and small farms. I think it would be well if farmers got instructions with regard to using artificial manures more than they do. There are farms of land I have known in my experience to have had their grazing and meadowing qualities very much improved by the application of artificial manures.

33823. Sir Francis Mowatt.—You mean instruction in the form of education?—Yes, because many people in backward districts don't know that such a thing as artificial manure exists.

33824. At present nothing is done in that way?—Very little. Some farmers individually do a little.

33825. In the form of instruction?—Instructors go around from the Department of Agriculture and Technical Instruction through different districts, but I think that those districts are not numerous enough, for the number of people who can attend their lectures is not large, as they hold them only in a few centres.

33826. Are these lectures well attended?—In some cases they are. There are very few holdings with manure enough on the land to work it, and in some cases they are not held in the most suitable districts.

33827. Do you think as far as your experience goes the lectures have had any beneficial effect?—In some cases they have, but often it is not in the best districts that the lectures take place. Some people think that the system good enough for their forefathers 100 years ago is good enough for them, but it is the want of education that causes people to have those views.

33823. Have you contemplated the advantage of having instructors resident in a district as compared with having itinerant instructors?—Yes.

33829. Have you formed any opinion as to whether the former is more desirable?—Yes. More benefit would accrue from them.

33830. Have you considered at all the district which one resident instructor could at all serve?—I would say that we should have one practical instructor going round the Mohill Union to the different parts and showing the people practical work. We want practice as well as theory.

33831. That contemplates an enormous staff of inspectors?—It would, but you could take on different districts; one Poor Law Union for a certain time, say, a couple of years, until the people were sufficiently educated there. There is no use in coming into a district and then going away and not returning for twelve months. Let them constantly give lectures in the one place and let practical results be derived from those lectures; then when one place was attended to they could take up their residence in another Union; but I would not have them always permanent officials.

33832. How many Poor Law Unions are there in Leitrim?—You have the Mohill and Manorhamilton Unions, and portions of Kinlough, Carrick-on-Shannon, and Bawnboy. There are only two entire Unions in the whole of Leitrim.

33833. In your experience of Leitrim do you think tillage is extending or declining in amount?—I would say that it is in a normal state, just the same as it has been for a number of years. There is no increase or decrease. It is practically the same for a number of years past.

33834. With reference to what you have said about instruction, should you say on the whole that the system of agriculture is improving and that farmers know more about their business?—Yes. I am very glad to say that some men have adopted different methods from what their forefathers had, and with very good results; but of course they are not very numerous yet.

33835. Take the question of applying lime. We have understood that up to a certain period, about thirty or forty years ago, lime-kilns were quite common throughout Leitrim and that the burnt lime was purchased by the tenants for their land, but that practically the use of kilns has disappeared, if they have not altogether disappeared?—They are disappearing. I would not approve of the application of lime to land without sufficient manure going along with it, because we all know the adage:—

"Lime without manure is sure
To make the farm and the farmer poor."

Nor do I think that the South Leitrim soil is suited to the use of lime either.

33836. But including manure don't they say that lime warms the cold heart of the ground?—They were not able to buy lime from their poverty.

33837. What I want really to ascertain is why they have given it up. You say that their poverty has increased?—They don't seem to approve of it. They approve more of artificial manures.

33838. Would you say that the change which has taken place has been the substitution of artificial manure for lime?—Yes, I would say so.

33839. Most Rev. Dr. O'Donnell.—In answer to Sir Francis you said you would like to see the instruction practical?—Yes. Theory is very little good without practice.

33840. Would you contemplate that the instructor should have a farm of the average size in the central part of the parish, which should be worked in a way that might be imitated by the people around?—Yes. Different districts should be chosen to carry out a system of tillage or a system of manuring and let the people go and get practical experience from those farms as well as listening to the lectures.

33841. You would not advocate a uniform cast-iron system?—I would not.

33842. Do you think, if there was a practical man with a small farm free to go round the whole neighbourhood and ask the people to come to his place, and different classes of land were worked in different ways and different animals kept according to their suitability, you would have a system of which you would approve?—Yes, but you could not have that a permanent system unless he could get a farm of land elsewhere. That is why I approve of individual farms being taken.

33843. If the place were well managed as a farm it could be sold when it had served its purpose?—Yes; that could be done.

33844. As each locality was brought up to a fair standing that could be done?—Yes.

33845. Sir Francis Mowatt.—What would happen if people attended an instructor's farm and found he had lost a crop?—We are bound to lose crops under any circumstances.

33846. I have known in England a show farm. The people all went to see how it was managed. I have no doubt that the instructions given were absolutely correct, but the crops occasionally failed, and I am afraid that that fact took away very largely the respect that had been felt for the instruction?—That may be so, but I am sure that the man who gave the instruction had nothing to do with the weather or the other things that made the crop fail.

33847. Sir John Colomb.—In connection with this agricultural instruction in this district, I presume there was great emphasis laid on the advantages of spraying?—Yes. I was going to touch on that.

33848. What is your opinion about spraying and what should be done?—It has done a great deal of good in this part of the country, both in the quality and the quantity of the crop; but the people are not sufficiently enlightened about spraying. Spraying can be done very well by a spraying machine, but in a number of districts the people have not got spraying machines and they use besoms or brushes of heather, which I don't approve of, and I have often told them they are practically only wasting the stuff, as it does not go on to the plants. The people have got an idea that one spraying is sufficient. One spraying is better than none, but one spraying is not sufficient in a county like this to protect the potato crop. I have seen isolated cases where the man sprayed the crop three times, in the middle of June, towards the beginning of July, and in the third week in July, and certainly the amount of the crop on that portion that was sprayed three times repaid him a hundred-fold for the amount of time and expense spent on the spraying. Spraying should be done in all cases twice to have any practical advantage at all from it.

33849. Sir Francis Mowatt.—Do you say that in a very wet climate, as you have unfortunately in Leitrim here, a man who keeps his wits about him will always find days on which he can spray his potatoes, twice or possibly three times during the season?—Of course, no matter how wet the year is there is no year in which you will not get a day sufficiently dry to do it or a half-day. If you got four or five hours it would do for the spraying. There is no time of the year in which you would not get some fine days. If it were always to be raining we would have another flood.

33850. Practically a man who realises the importance of spraying and keeps his wits about him will manage to find days to spray, even in wet seasons?—Yes, but one great disadvantage is that farmers have not got spraying machines. If three or four of them joined together to get a spraying machine it would be the proper thing. They often come into towns. A man in the town may have eight or ten spraying machines on hire, and there might be 100 men looking for them; and then they have to resort to the besom or heather brush.

33851. It has not been done to your knowledge?—No. It may have been, but I am not aware of it. Another point is the promotion of cottage industries. In South Leitrim, I am very safe in saying, there is not a single industry with the exception of the farming industry. There may be some isolated cases, but I am not aware of them. A great many of the young men in South Leitrim go every year to the County Dublin or England or Scotland to earn some money. They earn that to pay the rent of their holdings. The promotion of cottage industries would give a lot of employment to those young men and women who go away, and they would be able to remain at home and make their livelihood here.

33852. Have you considered what cottage industries could be made self-supporting?—In many parts of England I know young men to have been taught basket-making. They grow those osiers or rods and make baskets. They could also have weaving and things like that as cottage industries. Knitting and similar occupations could be found for the girls.

33853. Do you not recognise that you cannot permanently keep up an industry which is not self-supporting?—I am quite aware of that.

33854. You may help it at the start, but if its competitors from whatever cause produce cheaper and better articles than it does, that industry declines?—Yes, but I would like to see them started, and hope that they would go on. If they dwindled afterwards it could not be helped, but I would like to see a start made anyway.

33855. You have a firm opinion that there are industries which could be hopefully started?—I believe so.

33856. One of them is this osier industry, and then there is weaving?—Yes, weaving by hand-looms. No industry at present exists that I am aware of.

33857. Is there not a lace industry for the girls?—I am very sorry to say there was a lace class here in charge of the nuns, but it had to be closed as it got no assistance from the Department of Agriculture.

33858. Sir Francis Mowatt.—That looks like an industry that is started and is not self-supporting.

33859. Most Rev. Dr. O'Donnell.—It was not in a scheduled area?—It was not.

33860. They would have paid a teacher for a while?—I think the nuns were quite competent to give instruction. They learned the art of lacemaking.

33861. Is there a large number of young girls in the vicinity anxious to go on?—There would be a number of young girls anxious to go on, but they are crippled for want of funds.

33862. Sir John Colomb.—Looking at this land near the Shannon, and hearing the evidence about the flooding of rivers, it seems to an outsider that there must be land very suitable for growing osiers here?—Yes.

33863. Is there much osier growing here?—Of course there are a number of small farmers who grow them for their own small purposes, and make their own baskets, and so on.

33864. Are the baskets all made in the district now?—They are made in the district. They are the class of basket that I would not say you could put in the market. These osiers would, when peeled, be made into the ordinary shop baskets.

33865. Do you mean, with your experience, that you think there would be a demand for baskets if they

Apr. 26, 1907.

Mr. Thomas F. Smyth.

were well made, so that the industry would be a substantial one?—I believe there would.

33866. As regards the osiers, there is ample land suitable?—Ample land suitable for growing them.

33867. Are you aware that where there is a demand for them, osiers are about the most paying crop you could have?—I am aware of that.

33868. Therefore, what you want to bring before us is that from your knowledge of the circumstances of the district, and the fact that the land is suitable for growing osiers,, there would be a growing demand for proper baskets if they were made here?—Yes.

33869. Most Rev. Dr. O'Donnell.—Your answers on that point are very important owing to the damp nature of the country?—Yes.

33870. You are aware that on marshy land osiers can be grown plentifully?—Yes.

33871. Do you think that that project has been brought definitely before any public body?—Not that I am aware of.

33872. You suggest it to the Commission as one of the important industries that could be introduced into this part of South Leitrim?—Yes. I would not say exactly that it would be a very important improvement, but it would be an improvement.

33873. Sir Francis Mowatt.—You have suggested those industries. Could you hope, as we would all be very glad to hope, that as far as remuneration and wages go, they would be made to compete with the attractions of the United States and Australia?—I think so. Of course after some time there could be larger industries started in connection with them to compete with other countries. At present in existing circumstances cottage industries would be a great help, and would be the means of training people if they got larger industries.

33874. You would say, at all events, the chief cause which leads people to emigrate is lack of employment?—Yes, and unremunerative wages.

33875. Do you think it possible or probable by the different methods which we have been discussing here to-day to raise the rate of remuneration and increase the extent of employment so as to have a material effect upon the amount of emigration?—Yes; that is the point I wish to touch upon.

33876. Mr. Kavanagh.—Are you aware that the demand for osiers has almost entirely ceased; that boxes have almost entirely taken the place of hampers?—I am not aware of that. In a great many places in Ireland and England hampers are as much in demand as ever.

33877. Have you any osier beds in this country?—No.

33878. Then you don't know whether there is still a demand for osiers. My experience is that the demand for osiers has entirely ceased during the last five or six years?—I would not think so. I see hampers and baskets used as much as ever.

33879. I, unfortunately, used to grow osiers, and the demand has entirely ceased. The reason given is that boxes have entirely taken the place of hampers. Do you know of any basket industry to succeed in this county?—No.

33880. So in suggesting basket-making you are making a suggestion without having any particular facts before you?—Only from the statistics I read from time to time in connection with the trade. Then I say also that the breeds of horses, cattle, and poultry should be somewhat improved, and that the people should be instructed how to market their produce such as eggs and butter, and that more instruction should be given as regards dairying and things like that.

33881. Mr. Sutherland.—Has not that been largely done of late years in Ireland?—Yes, but I would like to see more of it done.

33882. As compared with the expenditure upon such instruction, have you seen any benefit?—I have in some cases, but they are only isolated cases. It has not been done yet in full detail.

33883. Do you think it was commensurate with the expenditure?—I should say it was. Another matter I have to touch on, and I have to do so with great reluctance, is this. I say that there should be more supervision exercised by the Congested Districts Board over the Parish Committees. I live in a congested electoral division, for which I chance to be a District Councillor, and I am not notified of a single meeting of the Parish Committee. There were elections from year to year, and I know for a fact that people who were inclined to be friends to some people have been denied grants. That is the reason I say that more supervision should be exercised by the Congested Districts Board over the Parish Committees. It is a matter that I don't care to touch on, but my reason for touching on it is this—I know people to whom grants were given when it would have been of more advantage to give them to others. I am not prejudiced against those to whom they were given, nor have I any particular friends to give them to, but as a District Councillor, and as Parliamentary representative for the constituency, I would like to see justice and fair play done, and all men treated alike. I don't like to see favouritism. Unfortunately it does exist. I am not going to give names, but I know people who were inclined to be friendly to me who were refused. In the district from which I come the meetings of the committee are held and I am not notified of the meetings.

33884. Most Rev. Dr. O'Donnell.—That is an important suggestion, that there should be supervision. Are you sure that under the rules you are entitled to be summoned to the meetings?—I consider that I should be an *ex-officio* member of the committee as a representative of a congested district electoral division.

33885. There are certain limitations. Shopkeepers are excluded. I don't know whether as an auctioneer you would be excluded, but there are certain exclusions, and it is quite possible that those exclusions would account for your not being summoned?—That is not the reason for it at all. As a matter of fact, some of the parties, if necessary, can make affidavits that they were refused grants.

33886. As a matter of fact before this Commission a gentleman stated that he had not been called, and made just such a statement as you, but it afterwards transpired that he could not be called under the regulations. That has happened already before this Commission?—The regulations were not looked into in this case. I am sorry to say it is a matter of what you may call local spite.

33887. I suppose things of that sort are now and then unavoidable. Did you call the attention of the Board to it?—Not until recently. I wrote to the Congested Districts Board recently for some facts, and I got a list of what the Parish Committees are composed of and all this.

33888. Don't you think it very likely that they will inquire very sharply into a matter of that kind?—I hope so. As I said before, I am not interested in particular people getting grants. I only want to see justice and fair play prevail. I think, as far as public boards are concerned, petty jealousy and spite should not be carried out.

33889. At the same time, the case you mention has not yet been sifted by the Congested Districts Board?—No.

33890. You are putting your side of it?—Yes. I will give full facts in connection with it. A number of people were refused grants by the local committee, and will be able to corroborate my statement.

33891. Sir John Colomb.—When was the Parish Committee established?—About three years ago.

33892. Were you then a member of the Rural District Council or member for the division?—When it was established first I was just co-opted a member of the Rural District Council, but in the election of 1905 I was elected for this particular district.

33893. Were you ever summoned to any of its proceedings at the formation, or subsequent to the formation of this Parish Committee?—No, not when it was started in 1904, but in 1905 I got a communication once or twice, and I went to one meeting, and the meeting was going on when I arrived, and I never got any communication from the secretary afterwards. That is going on ever since.

33894. You have actually received notice to attend?—I have received notice on two occasions. I went once to a meeting that was going on, and ever since I am not notified of them.

33895. Although you had actually attended a meeting and transacted business?—The meeting was almost over when I got in.

33896. You attended it?—Yes.

33897. Were you notified to attend it?—I was, on those two occasions. That would be last September twelve months. Since then I received no communication whatever from them.

33898. And you could not know when meetings were going to be held or anything?—No.

33899. Mr. SUTHERLAND.—Are the other members being summoned?—I believe they are. I heard of some of them being summoned.

33900. Most Rev. Dr. O'DONNELL.—This would not in any way disqualify you—no shopkeeper or member of a shopkeeper's household can act as a member of the committee?—I am not a shopkeeper or any of my family.

33901. It is rather a pity that you did not at an early stage bring this under the notice of the Congested Districts Board?—I was hoping that right would prevail in the end, and that some of these people would not be refused repeatedly. I only want to see justice done all round, and no favouritism on public boards. I never wrote to the Congested Districts Board about it, but coming over from London in March last I called into the office in Dublin and got the rules of the Parish Committee to look into the matter.

33902. Mr. SUTHERLAND.—In your opinion has the Parish Committee done good work?—Yes. Good work has been done by those committees. The people have improved their buildings, and other things like that have been done. The money spent by the Parish Committees in the different districts I know has been very well spent. This is the case in Roscommon, Leitrim, and other places that I know, but the point I was touching on was that justice should be done and fair play should prevail.

33903. Sir FRANCIS MOWATT.—Have you considered at all the question of migration—that is to say where it is not possible within the county to find additional lands by which the holdings of the small holders might be increased—have you considered, at all, the difficulty of migrating such men to holdings carved out of grass lands purchased in other counties?—I know that in some cases I know of, I think it foolish and a pity that people will not leave their holdings. I know with regard to the provision for evicted tenants, about which I asked a question in Parliament, some of them will not consent to take any farm unless they get back the farm from which they were evicted. I think myself if they could get a farm equally good they should take it. There is a great reluctance on the part of the Irish people that way to leave their holdings. A number of them will be glad to do it, but the greater proportion, I think, are opposed to that.

33904. In the case of that greater portion, should you say that the obstacle is sentiment—affection for their own homes?—A great many of them never got the chance of going. Plenty, if it was mooted to them, would be delighted to take advantage of it. Sentiment had something to do with it.

33905. How much: do you think the fear that they won't be very well treated by the small holders of the counties to which it is proposed to migrate them has anything to do with the reluctance of some of them to go?—I don't think it would be resented in any way. Generally the Irish people are very hospitable, and an Irishman generally regards himself as an Irishman no matter what part of Ireland he goes to. I don't think there would be any resentment.

33906. We have had evidence that while every Irishman has the warmest affection for every other Irishman, it makes an exception when he likes to take any of his land?—Yes. There are exceptions to every rule.

33907. You don't think the exceptions are sufficiently great to prevent migration to some extent being used as a means of relieving congestion?—I do not. There are places to which these people could be got to migrate which would be the means of relieving congestion.

33908. You think there is absolutely nothing in the difficulties that have been suggested to prevent this remedy from being used?—I would not think so.

33909. Sir JOHN COLOMB.—We have had this view put forward. Where the Congested Districts Board or other authority purchases a big grazing ranch or farm the first claim on that farm for the attention of the Congested Districts Board would be the uneconomic holders in the district. I presume you agree with that?—Certainly. They should have the first claim.

33910. We have had two different points of view presented to us in evidence: having provided on this land for the uneconomic holders of the district, one view is that the rest of the land should be appropriated by the Congested Districts Board to migrants from other districts?—Exactly.

33911. But another school of thought has presented evidence to us in opposition to that, and says that the claims of the farmers' sons of the county or the district should have the preference over the migrants from congested districts. In other words, I would ask you do you think that the business of the Congested Districts Board is plainly and mainly to relieve congestion by migration from uneconomic holdings on to that land, or ought they to give a preference to farmers' sons in that particular county?

Sir FRANCIS MOWATT.—Before answering that, you must recollect that the adoption of that latter view makes the reduction of congestion an impossibility? The local needs of every district should be best suited by following the lines recommended to that district. In some districts you might not have young men applying for the land.

33913. Most Rev. Dr. O'DONNELL.—Sir John's point is: if there was not land enough for the sons of tenants as well as migrants from a distance, which class should come first, after the men with uneconomic holdings in the neighbourhood are provided for. They should first have their holdings enlarged. Then Sir John points out that there are two competing classes for the balance of the land. These are migrants, congests from a distance, and sons of tenants in the locality?—I should say the sons of tenants should get it, because if they did not get it then they would have no means of living here and must go to America.

33914. Let us suppose there is a great desire to have sons of tenants planted on the land: which is the more urgent case, the relief of congestion or putting sons of tenants on the land?—The relief of congestion is the more urgent.

33915. Perhaps you would like to combine both?—If possible.

33916. If it cannot be done, which should come first?—Both classes are deserving. It is very hard to answer that. It is very hard to know which should get the first claim.

33917. It would seem to come to this. The body dealing with congestion should not be tied down in certain circumstances from giving holdings to sons of tenants?—No. They should have a free hand in that case.

33918. Mr. SUTHERLAND.—At any rate it is a hypothetical case as yet?—Yes, and one that will require more evidence to be given and all that. It cannot be dealt with right off.

33919. Most Rev. Dr. O'DONNELL.—You have not the circumstances here to any great extent?—Not very much.

33920. Would those who have small holdings here go to a distance if they got larger holdings?—Some of them would, but a great many would not. I have mentioned evicted tenants.

33921. Mr. SUTHERLAND.—The case of the evicted tenants is a particular one?—It applies to others who would not go to other holdings.

33922. Sir FRANCIS MOWATT.—Not for better holdings?—You would want to improve their position very much. I believe it is the want of education.

33923. Sir JOHN COLOMB.—Your view is that the Congested Districts Board or any authority appointed to relieve congestion must give the opportunities as far as possible for escape from the misery of the district?—Yes, they must.

33924. But beyond that they can do nothing if people won't avail of the opportunity: public responsibility then ends?—Yes, I should think so.

Mr. ROBERT WALLACE examined.

33925. Sir JOHN COLOMB.—Where do you reside?—At Clanmorris, Dromod.

33926. You are appointed here as representing the Mohill Rural District Council?—Yes.

33927. Will you kindly state any views that you wish to express?—I am Chairman of the Board of Guardians and of a Parish Committee, a member of the County Committee, a member of local drainage

Mr. Robert Wallace.

Apr. 26, 1907.

Mr. Robert Wallace.

boards, and Chairman of an Agricultural Bank; and in respect of these I should like to give general evidence from my own knowledge. I should like to say that in the first instance I consider that Mohill Union should be scheduled as a congested district.

33928. On the ground that you consider the non-congested area just as poverty-stricken as the congested area?—Yes. The Parish Committee of which I happen to be chairman has only one division, the smallest in the entire union—Cashel. I consider that the adjoining electoral divisions are as congested—Rooskey is in this position—that every occupier of land in it is the owner of it.

33929. They have purchased?—All of them; and I think it would be a great boon to those small occupying owners, if the district was scheduled, so that they might get the benefits of this grant. In Cashel I consider that in a very short time there will be no persons to apply for the grants, because they will be all supplied very soon. It is a small division.

33930. Are you speaking of grants to the Parish Committee?—Yes.

33931. You think you are within reasonable distance of arriving at the position that Cashel will have done its work so far as the Parish Committee can do it?—Yes.

33932. Then you want to apply the same principles to Rooskey, in the next division?—Yes. I think in Cashel, also, it is advisable that the valuation of those available for grants should be raised from £7 to £10. It very often occurs that the man with a valuation of £10 is in as much need of having his premises and out-offices repaired as the man with a valuation of £7, and sometimes he is more in need. I consider that the Parish Committee should have some discretion to deal with men who are unable to take advantage of its help at present, and are not able to supply the two-thirds of the estimate, to get the one-third from the Congested Districts Board. In some cases they are quite unable to do it.

33933. Most Rev. Dr. O'Donnell.—There might be a widow with some children who might not be able to do anything for her homestead?—Quite so.

33934. In a case of the kind the Parish Committee should have dispensing powers?—Yes.

33935. Sir John Colomb.—At the same time you see the necessity for having some standard. There may be some exceptions to it, but you must have some standard?—Yes, but there should be some exceptions.

33936. How would you regulate those exceptions?—I would leave it entirely to the Parish Committee, or leave it to the Parish Committee to make representations to some independent authority. You could have the Parish Committee and the independent authority represented by the Congested Districts Board, and probably if they consulted the Parish Committee, and went into it as a special case, they would be able to arrange a reasonable solution of the difficulty.

33937. Most Rev. Dr. O'Donnell.—Then you would like to see the whole parish almost under the operations of the committee?—Yes.

33938. Is your Parish Committee doing well?—Very well.

33939. You consider the Parish Committee system a good one?—An excellent one.

33940. Have you passed from the improvement of the homesteads to the improvement of the farms?—No. We have done some drainage in connection with the improvement of the homestead in some cases.

33941. Do you think would the Parish Committee be a useful machinery through which to give grants and prizes for the drainage of poor holdings?—I don't think they could be improved upon. I think they are the very best machinery we have at present, and I say that having some knowledge of Parish Committees, as I was a member of the Committee from the time that they started it under the Board.

33942. The Parish Committee, in intention, takes in the best men in the parish for the work?—Yes. Of course it is the parish priest should be the chairman, but it was at his special request that I accepted it.

33943. The Parish Committee has that advantage that the local men of public spirit and knowledge have opportunities of suggesting what should be done?—Quite so.

33944. They have initiative of their own?—Quite so.

33945. That system results in getting a great deal of work done in proportion to the grant?—Yes, a great deal of work in proportion to the grant; more than by any other system in vogue in the country at present.

33946. Sir John Colomb.—You don't give grants for the improvement of dwellings in cases in which manure heaps are allowed to remain close up to houses?—We do not.

33947. When you first started the Parish Committees did you find many cases in which there were manure heaps close up to the door?—Yes, in some cases.

33948. Can you explain this: you pay salaries to sanitary officers. Part of their duty is to see that these manure heaps are removed from outside the houses. The Parish Committee is doing what the sanitary officers fail to do, although they get a salary for doing it out of the rates?—That is so.

33949. Has the work of the Parish Committee in respect of improvements quickened the pace of the sanitary officers and made them more active?—I don't think so.

33950. Therefore the Parish Committee has lessened the work of the sanitary officers?—They don't do very much in that direction—nothing except in special cases to which their attention is directed.

33951. When there is an epidemic?—Yes.

33952. But, as an ordinary rule, these gentlemen get their salaries and don't do very much?—Yes.

33953. Mr. Kavanagh.—Do they bring prosecutions?—When they are ordered by the Board.

33954. Is the fine very heavy?—No; the prosecution generally fails. It did at the very last court here in Mohill.

33955. It is not altogether the fault of the sanitary officers?—No.

33956. It is the fault of the bench of magistrates?—Quite so.

33957. Most Rev. Dr. O'Donnell.—You consider that the best system of all is to make certain improvements which the people are inclined to see done contingent upon these sanitary works being previously carried out?—Quite so.

33958. You don't make any grant for these sanitary arrangements?—None whatever.

33959. You say you are not going to proceed until these are done?—Quite so.

33960. Mr. Sutherland.—What other improvements except sanitary ones do you carry out through the Parish Committee?—Drainage, and improvements to the dwellings, out-offices, and so forth.

33961. Drainage round the houses?—The main drains passing through the electoral division. We have the smallest electoral division in the Mohill Union. We cannot go outside the main drains in that division.

33962. Main drains taking away water?—Yes.

33963. Which before remained stagnant round the houses?—No; in the fields.

33964. That is really part of arterial drainage?—Yes.

33965. Perhaps later you might deal with drainage in a larger way?—That is an excellent way to spend money, but arterial drainage is too large a thing to go in for.

33966. Sir John Colomb.—The net amount of grants made by the Parish Committee to the 31st of March, 1905, was £25 8*s.* 4*d.* What amount of work do you think was represented by the amount of work you got done?—Three times that amount.

33967. Mr. Kavanagh.—You don't help anybody over £7 valuation?—No.

33968. We have had evidence as to the desirability of enlarging that limit to £10?—Yes. We are most anxious to do that.

33969. You would enlarge your area without increasing your funds?—Yes.

33970. But it would decrease the amount you could give in each case?—Yes, except our grants were increased.

33971. You wish the two to go together?—Yes. We would like to get a larger grant.

33972. Sir John Colomb.—Suppose the Congested Districts Board said: "You cannot have a larger grant; you must stick to the grant you have got," would you still be in favour of extending it from £7 to £10?—I would, because I think the £10 is equally in need with the £10 man, and sometimes more so.

33973. Mr. Sutherland.—You say you are a member of the local drainage board?—Yes.

33974. Kindly explain what that board is?—There are two boards in South Leitrim—the Rinn and Blackriver and the Eslin. I gave evidence before the Arterial Drainage Commission a year ago in Dublin. They have recommended that there should be a board of conservators to take charge of the main basin of the river and of the outlet; that that would be composed of persons elected by the owners and by members of the County Council; that the drainage rate would be collected by the County Council, and struck as a separate rate is struck at present, such as compensation for malicious injuries; and that for the smaller drains there should be drainage boards elected by the owners to look after the smaller drains. They also recommend that as regards the main basin of the rivers, or the larger portion of it, there should be a grant from a Government department or some board to do that, and that the drainage of the small tributaries should be paid for by a rate struck upon the lands to be benefited.

33975. Sir JOHN COLOMB.—From your experience of drainage boards, do you concur generally in that report?—I do.

33976. Mr. SUTHERLAND.—What does the existing drainage board do? Is it a statutory body appointed under an Act of Parliament?—It is.

33977. What are its duties?—Their duties are to maintain all the rivers in a state of repair. These works were done forty years ago, and the board is to maintain the rivers in a proper state of repair to carry away the water. About twenty years ago the board failed to discharge its duties, or did not keep the works in a proper state of maintenance, and the Board of Works came down and expended upon the Rinn and Black river £2,700. At that time the Earl of Granard's estate was selling in the County Leitrim and Longford. The year following all the small owners who purchased their lands were taxed to repay this money to the Board of Works, with five per cent. added, and they paid it for twelve years; and that left drainage charges very unpopular in this part of the country.

33978. Sir JOHN COLOMB.—Why was five per cent. added to it?—I cannot say, but I know it was, because I have the order.

33979. The property was transferred from the landlord to the tenants?—Quite so.

33980. Before the property was transferred to the tenants from the landlord the landlord had been under certain obligations?—Quite so.

33981. Was not it part of the business of the Land Commission in settling that property to arrange as to the terms on which the landlord was to redeem his obligation?—I don't think so, for this reason, that the work occurred just about the time of the transfer. The landlord did pay it up to a certain date. This work occurred at the time of the transfer. The purchasers knew nothing about it. They thought it a boon when they saw the work going on; but immediately afterwards they were called upon to pay a sum of £2,700 inside of twelve years, with five per cent. added to it. That was the order of the Board of Works.

33982. That arose from the fact of the transfer of the property taking place simultaneously with the establishment or the carrying out of this work involving those charges?—Quite so.

33983. The tenants did not understand it?—They did not. Since then the Drainage Board have levied rates themselves, about £600 for the last few years, on the Binn and Blackriver. On that river and the Eslin there was a rate levied of £200 within the last few months to do some work.

33984. Is the work completed or still going on?—It is going on on the Eslin. It is completed on the Blackriver, but the work is badly done. It is insufficient.

33985. Mr. SUTHERLAND.—Do you meet at stated intervals?—Yes.

33986. When you say the work is not well done do you mean that the quality is not good or that there is not enough of it?—There is not enough of it. There is not enough money expended on it. There are Government grants made to the main river.

33987. It is perfectly clear if it is not attended to every year the water courses will silt up?—It is not attended to every year.

33988. If it is attended to every year a comparatively small sum will maintain it?—On the upper portion of the drainage district it is supposed to drain about 2,000 acres, but on the lower portion, which empties itself into the Shannon, the outfall is bad. The more drainage is done on the upper portion the more harm is done on the lower portion. It flows up more quickly than it can get away, and it floods up to Johnson's Bridge, where I live myself, and spreads out on the lands.

33989. Sir JOHN COLOMB.—Was the drainage rate you struck for maintenance or for payment of the capital charge?—For maintenance only.

33990. Did the Drainage Board, of which you are a member, approve of the plans and estimates of the work that was to be carried out, or was the Drainage Board called into existence to carry out at a fixed expenditure and in accordance with the specifications already settled?—The Board was called into existence under the Act of 1842, and the work was done originally, I assume, by the Board of Works, and the duty of the Board was to maintain those works in proper condition, and for that purpose to tax the lands to be improved.

33991. The works had been established and done by the Board of Works and had not been properly maintained, and then it became necessary to do something, and then the Drainage Board was called in?—Yes.

33992. Then it was a question not of capital expenditure but of maintenance?—That is right.

33993. Most Rev. Dr. O'DONNELL.—Would your Board have authority to make fresh drains?—No; nor would we have power to enlarge it in the smallest degree at all. There are portions of the country to my own knowledge more in need of it that are not in the drainage district on the map, and you cannot expend a penny on these.

33994. Your powers on the Drainage Board are not constructive powers, but maintenance powers?—Maintenance powers.

33995. Was there much difficulty in the first creation of your Board?—Great difficulty. It was done by the large landowners forty years ago. The thing could hardly be done now. It is so troublesome and so expensive we would not get a body now to take it up.

33996. From your own experience and the evidence given before the Drainage Commission you would infer it is very difficult to constitute drainage boards now?—Most difficult.

33997. You seem to approve of the recommendation which you tell us is contained in the report to the effect that the large waterways should be cleared by grants from the Government?—Certainly.

33998. And that the small drainage, which immediately benefits the occupiers, should be done with some liability to the occupiers to pay for the drainage by which they benefit?—Quite so. That is the idea.

33999. Mr. SUTHERLAND.—With regard to the obligation that was transferred at the time of the sale of the land that loan was for the purpose of making the work efficient?—It was this way. The Board of Works have power, if the Drainage Board do not discharge their duties sufficiently and do not keep the works in a proper state of maintenance, to come down and expend any sum they choose themselves and tax it on the lands adjoining, and that is exactly what they did.

34000. And this represents a certain sum that they spent on it?—They spent £2,700.

34001. Did you ever consider whether you might not apply to the Treasury to get that expenditure remitted, seeing what a millstone it was round your neck?—We did not consider it.

34002. The Treasury frequently does that where there is an irrecoverable sum of money, they think it better to wipe it off and allow the bodies to proceed without being hampered with old arrears?—No. We found the Board of Works very difficult to get on with.

34003. You might go higher than the Board of Works. They are only the servants of a higher body?—They did this under an Act of Parliament.

34004. There is no object of keeping on a loan as a debt where the prospect of getting repayment is very remote?—They are now repaid.

34005. It is an intolerable burden; you are prevented from making improvements to these highways which you would have made, because of a burden the repayment of which is very difficult?—Quite so; it put us in that state, but we are striking a new rate for the maintenance now. That happened seventeen years ago. It is a most unpopular thing to collect any little sum from the people now to maintain those works, that £2,700 was such an unpleasant surprise at the time, coming down all at once.

Apr. 26, 1907.

Mr. Robert Wallace.

34006. Sir JOHN COLOMB.—As to the intolerable burden referred to by Mr. Sutherland, when the work was undertaken in 1841 it involved a large capital outlay?—Quite so.

34007. I presume that was borrowed from the Board of Works?—Yes.

34008. I suppose that sum was long ago paid off?—Long ago.

34009. Therefore the question arose from the accumulated neglect of the work of maintenance. The work having been in arrear it had to be met and the money had to be raised in some way: is that it?—That is it.

34010. And the expenditure was incurred not as part of the original cost of the work, but was rendered necessary by reason of neglect of maintenance?—Quite so.

34011. Mr. SUTHERLAND.—Is there any debt whatever now?—None, except the £200 we struck ourselves the other day.

34012. Most Rev. Dr. O'DONNELL.—But your point to the Commission is that the memory of all that had to be paid in connection with the Drainage Acts acts as a deterrent to prevent the ratepayers from agreeing to a rate that might be levied for various improvements?—It is a fact. I would just like to add that in the expenditure of this £2,700 I believe £1,000 properly expended by the Drainage Board would have resulted in more useful work being done than the Board of Works did for the £2,700. They simply squandered it.

34013. Mr. KAVANAGH.—The rate you strike now is only for maintenance?—Yes.

34014. If you stop that maintenance the benefit of the previous drainage would be lost; is not that so?—The drainage would get into disrepair.

34015. Would not that bring about the loss of all the previous expenditure?—It would.

34016. Have this Commission to which you refer recommended that all the existing Drainage Boards should be merged in the County Council?—No, they have not recommended that. They recommended that there should be a Board appointed with members elected from the owners and members elected from the County Council, and that the County Council would collect the drainage rate as they at present collect what are called separate charges.

34017. Practically the County Council would be responsible?—They would be responsible.

34018. CHAIRMAN.—Reference has been made to a lace class; why did the lace class cease to work?—The Department declined to recognise the teacher as a qualified teacher, and then the girls whom she was teaching did not get the capitation grant, and it fell through on that account, although the work turned out realised a high price.

34019. What would the teacher have to do in order to be recognised as qualified?—She would have to get a certificate.

34020. What would she have to do in order to get that?—Pass an examination.

34021. Had not she passed the examination?—Not under the Department. She was one of the Sisters of Mercy.

34022. Most Rev. Dr. O'DONNELL.—She had not got the certificate?—Yes.

24023. She was a good worker?—An excellent worker, and the work turned out realised high prices.

34024. I think at the start the Department was more lenient on that subject; afterwards it became more exacting on the subject of certificates?—Yes.

34025. CHAIRMAN.—Simply because the teacher was not recognised by the Department as a qualified teacher the school collapsed?—The school collapsed.

34026. Was that a loss to the district?—A great loss. From twenty to thirty girls were attending and making a nice thing out of it.

34027. Most Rev. Dr. O'DONNELL.—The capitation grants to the workers are usually the endowment to those who have charge of the school?—Yes.

34028. CHAIRMAN.—Why did they not get another teacher: was it out of a sense of loyalty to the teacher?—I can hardly answer that. The teacher was competent, and the Committee in charge did not appoint another teacher.

34029. Sir JOHN COLOMB.—Did they ever receive a grant from the Department?—I don't think so.

34030. Did they ever contribute to the salary of the teacher?—No.

34031. Was the lace school started without any grant or assistance from the Department?—Certainly.

34032. And then, having started it, and, as you say, got on successfully, was there any application for a grant or how did the question arise?—There was the application to pay the ordinary capitation grant that is paid to every school, that each of the girls attending would get so much a week as a capitation grant. That was not paid by the Department.

34033. They had never received it?—No.

34034. It was started by voluntary effort by the beneficent action of the nuns; it was a going concern and successful and yet when they applied for a capitation grant the objection was raised that there was no qualified teacher, and therefore they did not get the capitation grant?—Yes.

34035. That left you in exactly the same position as you were in before, and I would like to know why the school collapsed?—There was no monetary encouragement. They expected to get something when the teacher would give her time and labour.

34036. Most Rev. Dr. O'DONNELL.—It was started in that hope?—It was started in that hope.

34037. CHAIRMAN.—If they were earning money was not it a rather foolish thing to give up those earnings merely because they could not get an increased grant?—That might be, but it was a very unpleasant thing to be working and not to get any money, when they were expecting it and after they had started it on the understanding and in the hope that they would get those things, and in this way they were completely disappointed.

34038. But they were selling their lace and getting a good price for it?—Fairly good.

34039. Then they gave up that in order to try to get more?—They gave it up.

34040. Sir JOHN COLOMB.—How long was it from the period of starting the lace-making until the disillusionment?—One and a-half years.

34041. Did they get from private sources any assistance which was given in the expectation that once started the grants were to be obtained?—Nothing, but what the lace realised by sale.

34042. Most Rev. Dr. O'DONNELL.—Would it be that the amount realised for the lace went into the hands of the workers, and the nuns, from the other demands upon them, would find themselves unable to continue the services of the teacher without some recognition from a public body?—That is exactly the state of affairs. About Rooskey electoral division, which I represent, they are all occupying owners. Every man in it owns his land. There are 1,100 acres of bog in the hands of the landlord, the Earl of Granard. I consider if the Congested Districts Board would purchase up this bog at a small outlay and drain it it would be a most valuable addition to the small holdings around the neighbourhood, because those bogs when drained, I know of my own knowledge, produce fine crops of potatoes and oats, and even meadow, though they are growing heather now. If those bogs are utilised in that way for the enlargement of holdings in the neighbourhood it would be a great benefit.

34043. Would you suggest that all the bogs should be held together by a body of trustees, or that each small holder should have his own part?—Each should have a small portion for turbary, but where there are large tracts the rest should be vested in trustees.

34044. Sir JOHN COLOMB.—There is plenty of turf in the neighbourhood?—There is plenty of turf.

34045. Most Rev. Dr. O'DONNELL.—Would it be surplus you would suggest for reclamation, or the cut away sole?—The surplus. It would be too long waiting for the cut away sole.

34046. Mr. SUTHERLAND.—I find in the return that there are twenty-three holdings in Rooskey under £4—were these bought?—They were all bought. Every holding in Rooskey is purchased out.

34047. What made these people purchase holdings of that size?—Because they occupied them, and had no more.

34048. CHAIRMAN.—What Act did they buy under?—The Ashbourne Act.

34049. Most Rev. Dr. O'DONNELL.—Have they turbary?—They have all.

34050. This purchase you would suggest for the benefit of people who have small holdings is with the object of reclamation?—Yes.

34051. Sir JOHN COLOMB.—Is there grazing on it?—Heather.

34052. Nothing but heather?—Nothing but heather. These bogs are capable of producing better crops than some mountain land.

34053. They are not very deep bogs. I suppose the gravel is near?—They are very deep bogs.

34054. The gravel is a long way down?—It is.

34055. Is it on the slope or capable of drainage?—It is flat, but can be drained.

34056. If the bog is very deep, would it not involve very great expense in draining it?—I think it is less expensive than draining up-land. It is easy to open drains in bogs, and less laborious than in up-lands. Then the purchase price would not be large, so that it would not be a very expensive proceeding.

34057. Most Rev. Dr. O'Donnell.—Is it of any service to the Earl of Granard?—Not much. He shoots over it.

34058. Sir John Colomb.—You heard the evidence of Mr. Smyth as to the grass lands. May we take it that you generally concur?—No, I don't concur with some of the things which he says. For example, there is a large tract of land purchased in Roscommon for the purposes of migrating people there. The disposition is that the sons of farmers in Roscommon should get all that. I think they should not get it all. I think there should be some migration from Donegal and other congested districts, or from Leitrim, or wherever congestion exists.

34059. The poverty-stricken districts, in your view, where there is serious congestion, wherever they are, have the first claim on the Congested Districts Board?—Quite so.

34060. But you give the preference to poverty-stricken districts in the neighbourhood of Roscommon?—Yes.

34061. Mr. Sutherland.—I think that is also what Mr. Smyth advocated?—I would like to think that that is what he meant. To exclude everybody but Roscommon people would not be fair.

34062. Most Rev. Dr. O'Donnell.—If the son of a tenant helped strenuously in the work of bringing in these migrants and getting the country pretty well settled, you would reward a man like that if you could by giving him a bit of a holding?—I would.

34063. But you consider, as between sons of tenants and congests from a distance, the congests have distinctly the right to preference?—Yes, but I think all the sons of tenants in Roscommon should not be provided with holdings to the exclusion of others. It would be well to give to one if he is remaining at home, but it would be scarcely fair to other congested districts to give it all to sons of tenants in Roscommon.

34064. Chairman.—You were saying if a son strenuously helped in settling people on the land you would reward him by giving him a holding?—Yes.

34065. What do you mean by strenuously helping?—If he took an active part in helping to carry it out.

34066. You might have a great many sons of tenants helping to carry it out?—I would not give it to all the sons of one farmer. Suppose he had three or four sons, and he wanted farms for each of them, it would be quite unfair to give farms to each.

34067. Would not you be inclined to say that until all the heads of families living upon uneconomic holdings and willing to migrate had their claims satisfied the claims of sons of tenants should not be considered?—I think that would be fair.

34068. Has not the man living with his family on an uneconomic holding a great deal more claim than the young son of a tenant who has got the world before him?—Yes; but if the young son does not get something he will emigrate.

34069. Better he should emigrate than that a whole family should be prevented from migrating from an uneconomic holding and compelled to continue to live in great poverty?—The father won't migrate.

34070. Then it means he goes on living in great poverty and distress, and the State has occasionally to provide special funds to help him to carry on?—That may apply to the extreme West. It does not apply generally. They are not in that bad condition generally. It does not apply to the West, I should say.

34071. You would be inclined to say that these people should be helped before the sons of tenants?—Certainly.

34072. Most Rev. Dr. O'Donnell.—I was going to ask you this. Suppose there was a small man in Roscommon in the neighbourhood of grass lands, and his holding was being enlarged, but he was not getting the enlargement he desired, nor in a place that he desired, and then this man has a son, and he says to the old man, "You must not hold out in this way; you, too, must make a sacrifice," and through his effort the old man does make the sacrifice, and the way is made clear for the incoming of migrants from a distance. That is the class of case in which possibly the son, if there were land available, after providing for the migrants, or with the migrants, would have a special claim?—He should be considered very favourably.

34073. A young man who would prevail on the old people, and make the way smooth for the incoming congests?—Yes; that man should get a farm and be treated very generously.

Mr. George F. Stewart examined.

34074. Chairman.—You appear on behalf of the Landowners' Convention?—Yes.

34075. I see that you have been agent for a large number of estates since 1878?—Yes.

34076. You state that you are a Justice of the Peace and Deputy-Lieutenant for the county, and your firm, J. R. Stewart and Sons, of Dublin, have a very extensive land agency business in different parts of Ireland?—Yes. In my experience in no part of Ireland are rents better paid than in County Leitrim. Before the sale of the Crofton Estate—the estate on which we are now sitting—round Mohill, I had to deal with some 2,000 tenants in this county, paying some £17,000 a year, an average of about £8 10*s.* per tenant. I find, on consulting my rentals, that I have received practically a full year's rent each year during the last ten years.

34077. When was the sale completed?—In 1898.

34078. The average rent of those tenants was £8 10*s.*?—Yes. The 2,000 tenants are not all Crofton tenants, but something like 600 were on the Crofton Estate. The average might be a little higher on the Crofton Estate. If there has been a trifling falling off in one year it was made up the next. If necessary, I can give the particulars showing these facts. The average rent and poor law valuation of County Leitrim farms being so small, it may be thought that they are uneconomic, and comparatively valueless, but as far as my experience goes, these small farms are relatively more valuable than other large farms, that is, they fetch a relatively larger sum when put up for sale by the occupying tenants. I have known many instances of the sale of tenants' interest in the county. I have taken out twenty-five cases of sales lately. On one estate they averaged twenty-three years' purchase of the rent. On another estate close to that the average is twenty-eight and a half years' purchase. These are for tenants' interest.

34079. Most Rev. Dr. O'Donnell.—Those are small holdings?—Yes. For instance, on one estate the biggest rent was £13 14*s.* On another estate one rent was as high as £49, but no other rent was as high as £20.

34080. Chairman.—Do you think the value of a holding can be measured at all accurately by the price fetched by the tenant right?—I think its value as security for an advance may be so measured. If I was lending money myself on a holding, and if I knew that the tenant right on that holding would fetch twenty-three years' purchase, I should think myself, whether rightly or wrongly, that I should have very good security for my money. I am pressing the point no further than that.

34081. You say these farms are of relatively more value than the large farms because they fetch more for the tenant right?—Yes.

34082. But is not it the fact all over Ireland that the smaller the farm the higher the tenant right is?—Yes, as far as my experience goes.

34083. That is because so many people are looking for a home, agriculture being practically the only industry of the Irish people, and these small farms therefore fetch a higher price proportionately than the bigger farms which are only within the means of

Apr. 26, 1907.

Mr. George F. Stewart.

a few?—Certainly; but also as far as my experience goes I say that a £10 or a £5 farm in Leitrim will fetch more money than a £10 or a £5 farm in any other district that I am acquainted with. I don't say than in any other district in Ireland, because I believe that in Donegal or in some of the extremely western portions of the country they will fetch even more than here, but they will fetch more here than in either Kildare or Meath.

34084. Because the population is thicker?—I am sure there is some excellent reason. I merely mention the fact that for a £10 holding here a man would get more than he would for a £10 holding in, say, Westmeath, if he were to dispose of his interest there.

34085. It is not a healthy thing that you should have very keen competition for a thing that is not economically worth the money that it fetches?—I don't know that. I was not pressing that point. My argument was simply addressed to the fact that I understood it to be stated that a farm in such a district as this would not be security for a Government advance. My whole argument is limited for the purpose of my evidence to this point that I think the fact that the interest of the tenant in the farm has a great market value is a proof that it is security for advances. Beyond that I don't say that it is healthy.

34086. You then shift the security of the State from the holding to the holder: the security of the State is no longer based on the agricultural value of the holding or of the land, but upon the ability of the occupier to pay the annuity: it is something intangible?—It is a security.

34087. It is a human security, and a thing perfectly intangible and perfectly impossible of estimating: is it not? As long as you have got the land, which represents an intrinsic value, reasonably tilled, there the State feels that it has got a regular security, a security which can be estimated, and which does not go away; but the moment that the advance by the State for that land is over the true value of the land then the security of the State is shifted from the land to the human beings who inhabit it?—If you had here a vacant farm with nobody on it at all; suppose it is in the landlord's possession, that farm remains of the same value quite irrespective of having anybody on it.

34088. Surely it depends on what the land is—whether it is good, bad, or indifferent; it might be of no value?—Take an ordinary farm of the average kind round here; if you had it vacant you could sell it at an average rent at a price such as I mention here in these returns which I have prepared, and that is irrespective of any person being on it at all.

34089. I suppose it is within your experience in Ireland that the tenant right of a farm is very often sold for much more than the true value?—More than I think they are worth.

34090. More than a practical man considers they are worth?—Quite so.

34091. We have heard instances in Donegal of farms fetching 128 and 200 years' purchase?—So I have heard.

34092. That is obviously absurd. That does not represent the true value of the holding at all. It represents the competition in that district. Nobody would say surely that you could measure the value of that holding either for the holder, as a basis of what his profit is going to be, or as security for the State, at anything like the sort of price it fetches?—No. I give you the argument as it appears to me. I think myself if I was asked to advance money on a holding and it was shown to me that the holding was a holding which would always fetch a very substantial sum——

34093. How do you know it will always fetch that sum?—It always has.

34094. At present the rent of this part of the world comes almost entirely from America?—I don't think it does.

34095. The greater portion of it?—I don't think the greater part of the rent. The rent is a very small proportion of the outgoings for the year. If you allocate the American money to the rent you might do it that way, but I don't think the greater portion of the rent comes into the country from America.

34096. In any case your argument amounts to this: the State must base its security not upon the intrinsic value of the land but upon the capability of the country to pay annuities from some source or other?—I suppose it might be so. No farm would pay anything without a farmer.

34097. But it is impossible for people on many of these small holdings to obtain sufficient money from the holding itself to pay annuities upon it?—No, I don't think so. I would rather support the evidence of Mr. Vaugh. He did not know a farm in the whole county where a solvent tenant could not pay his way.

34098. Mr. Sutherland.—Possibly the misconception may have arisen with regard to your conception of economic and uneconomic. Am I putting your case fairly when I say you consider a holding economic out of which a certain rent can be got irrespective of the products of the land?—I did not use the word economic in any very highly technical sense.

34099. You find fault with those who say that they are uneconomic?—Yes. They often say these farms are uneconomic. I want to combat an objection which I thought was made to sales in a county like this that the holdings being so small are no security to the State. My honest belief is that they are security to the State. I want to combat that view. I don't press it further than that.

34100. It would be so then if these holdings were sold to poor people at rates which afterwards they find it very difficult to pay, through any change in their circumstances whatever, and seeing that the annuities which they have to pay could not be paid out of the land itself it would be a serious thing for the State to make the advance of this money without better security?—I think there is at present no case where the annuity would not come out of the land.

34101. Chairman.—Do you think it necessarily follows because on these small holdings your fixed rent has been regularly paid that therefore annuities should also be regularly paid, and that the State should be secured in that way?—Take the case of the Crofton estate, which was sold in 1898. I have every reason to believe that the annuities are extremely well paid. I have taken the trouble to go there from time to time; and, as I mention later on, I should know if they were not very well paid, because there would be some application made to take some part of the guarantee fund under the previous Act, and no application has ever been made. Therefore I am sure that they must be very well paid.

34102. It seems to me quite conceivable that you might have very great regularity of rent-paying on small holdings, so long as there is a fifteen years' revision of rents. If it is found impossible for the people really to pay the rent, and the tenant-right is sold, and fetches a high price, it is because the tenant purchasing the holding knows that in so many years he can demonstrate to the Land Commission that his holding is incapable of carrying that rent, and he may get a reduction; but, on the other hand, suppose that ceases, and that the position is that the occupier will have to go on paying the annuity for sixty-eight years, then if it is generally found that that holding won't produce the annuity, do you think would the tenant-right remain as high in the district—do you think if that man was to be turned out and the Government put up his holding they would get a good price?—It is very hard to say. The only experience I have I give to you, and that is this estate on which we are sitting at present.

34103. Suppose three or four men failed in succession in a small holding, and could not earn the annuity in the place, what do you think would happen? Do you think that people would go on becoming occupiers of this holding ready to pay the old annuity—I very much doubt it?—I don't think that case ever would happen. It has not happened in the past, and I don't think it would happen in the future. I don't see that there will be any greater risk on a small farm here than on a big farm in Kildare.

34104. Because on a big farm in Kildare the land is capable of giving the annuities?—I think the land is here, too.

34105. If you start with the opinion that there is no holding in the West of Ireland, or at any rate in Leitrim, that is incapable of paying the rent or the annuity that is a different thing?—Certainly, I would take up that line as regards the average holding.

34106. Sir John Colomb.—I understand the main reason of what you have said is to show that, in your experience and the experience of your firm, extending over a considerable time, you have found that the tenants were honest and paid their rents?—That is a fact.

34107. Therefore you argue from that, if this was so in the past, taking a long series of years, that the same state of things should exist in the future where a permanent reduction is made in the rent or annuity?—Yes.

34108. And your real point is this, that, taking the character of the people and the circumstances of the district which your firm has managed for many years, you are not in the least apprehensive as regards the annuities?—I have no more apprehension with regard to here than anywhere else.

34109. Most Rev. Dr. O'Donnell.—Is not Lord Dudley right in saying that the large demand for these small holdings beyond the number of them coming into the market in Ireland is the cause why small holdings are proportionately dearer than large ones?—Certainly, that is the reason, because there is a distinct demand.

34110. Consequently the fact that very big prices are sometimes paid for small holdings is no proof or indication of any special capacity of small holdings to maintain a family?—No. I merely press it that it is security for an advance.

34111. Mr. Kavanagh.—It would not be an extravagant price having regard to the argument?—No; twenty-three and twenty-eight years are not very extravagant. You must have come across very much higher ones in your experience.

34112. Chairman.—Well, I will leave it that the security is personal rather than real?—I am afraid I don't agree about that, because it applies to an unoccupied farm.

34113. Sir John Colomb.—Let me illustrate it in this way. Take the holding as illustrated by Lord Dudley. There is a holding and there is, say, a potato ground. The annuitant fails to pay. Would not there be a great demand by neighbouring tenants for that potato ground?—Of course.

34114. That will enhance the price?—Certainly.

34115. Therefore the potato land itself is security, although with the house it might not be an economic holding?—If you take economic in a technical sense.

34116. Competition for this small plot of ground among several others will be so great that the State is not incurring a risk, because there will be always competition for this potato ground, although the man on the potato ground may not be able to support himself out of it?—Yes.

34117. Mr. Kavanagh.—How many years would the landlord's right of pre-emption buy up?—I never used the right myself. It was discontinued at a very early stage. I don't think it was used much.

34118. You could not, therefore, compare it with the number of years' purchase in the open market?—I have not any data.

34119. Mr. Sutherland.—You would not go the length of saying it might not be a desirable thing to make an attempt to enlarge these holdings before they are purchased, if possible?—I think it would.

34120. And that therefore the security would be, humanly speaking, better?—I should be very glad to see the small holdings enlarged. Everyone would, of course.

34121. Most Rev. Dr. O'Donnell.—The incident which you give helps to illustrate the situation. If a man had 200 acres in his hands he could do many things with it. He could divide the 200 acres into two farms of 100 acres, and put them up for sale, or into twenty farms of ten acres. The competitors for a farm of ten acres would be more numerous than for a farm of 100 acres?—Certainly.

34122. Owing to competition, the farm of ten acres would, proportionately speaking, fetch more than the 100-acre farm?—Relatively, it would.

34123. I was anxious to know the details of the Crofton sale?—We sold on first term rents, and gave 4*s.* 9*d.* or 4*s.* 10*d.* reduction, or eighteen and a half years' purchase.

34124. Under which Act was it?—It was in 1898, and must have been under the Act of 1896.

34125. Did they arrange for decadal reductions?—They did not at that time. What they have done since I don't know.

34126. What was the rental?—We sold more than £5,000 a year.

34127. Has each of them got turbary?—Yes. Everybody has got turbary.

34128. Was there a special charge for turbary?—No. The turbary was included in the rents except in a very few cases.

34129. Eighteen or nineteen years' purchase of the rent covered everything, turbary included?—Yes, except in a few cases. There were a few who paid ten shillings for turbary, but that was included as if it was part of the rent. A man whose rent was £9 and who paid ten shillings for turbary bought on a rent of £9 10*s.*

34130. Is there any charge now for turbary?—No.

34131. How long is it likely to last?—I have heard no word of anyone being pinched. There were one or two bogs on that estate where the turbary was not considerable. Each purchase agreement contained a reference to so many acres of land together with the right of cutting turbary on such and such a bog. Where the Land Commission thought that bog contained too small a supply we put in another big bog further off, so that a man had a right to cut turf on such and such a bog or such and such another bog further off.

34132. I was interested to know what you calculated as the full number of years for which turbary has been provided?—I don't know that we calculated. We gave all the bog, in the sense that the bogs on the estate are a subject matter of turf cutting. We gave a right of cutting turf, which will last as long as the bogs last. Some of the bogs will last for hundreds and hundreds of years, but there were some that were getting tightened up.

34133. Persons cutting on them got provision at a distance?—We put two bogs in in cases where the Land Commission thought that one bog might be cut out.

34134. The Land Commission had supervision of this transaction?—Yes. The whole thing was perfectly amicable. As far as I have reason to believe the whole thing worked extremely well. We have had no complaint. We never heard that the Land Commission had any complaint of any quarrels on the bog or anything like that.

34135. I am interested to know how some of the tenants had been paying ten shillings and others not?—Some of the rents had been fixed in court and others not.

34136. Had those that were fixed in court a right of turbary annexed?—No. Those who did not go into court had free turbary. Those who went into court where turbary rent was not fixed on them at the time of the fixing of the rent paid ten shillings in addition for turbary.

34137. Was it fixed under a distinct regulation—ten shillings for turbary?—It was. Then they bought as if that sum were part of the rent.

34138. Would those tenants with a special payment for turbary be at a special disadvantage as compared with the others?—No. I do not think so. I do not think there was any difference. I believe therefore these small farms afford perfectly good security for any reasonable advances which may be made by the Land Commission for their purchase. I am further confirmed in this view by my experience of the sale of the Crofton estate round Mohill. I am informed and believe that the tenant purchasers on that estate have paid their interest with great regularity. Certainly the guarantee fund has never been called upon in any way to make good their default. I understood, too, that the purchasers are in a somewhat more comfortable state than they used to be in formerly, and that their houses, and more especially their out-offices, are decidedly improved. I anticipate the same results when other estates are sold.

34139. Mr. Sutherland.—This is a very valuable instance, and it is certainly a better result than we have been hearing anticipated for the future. This experiment has now lasted nine years?—Yes.

34140. So you can quite logically, I admit, draw certain inferences from it. May I ask with regard to the estate how much of it have you retained?—Only the town of Mohill and these town parks around it—that is all.

34141. Is there any demesne?—No.

34142. The remainder, except what you have mentioned, is all sold?—Yes.

34143. Your purchasers got exceptionally good terms, as things go now?—They got very much like what I should give anyone now. On any estate being sold now on first-term rents the tenants would certainly, as far as I know, get six shillings in the pound. I myself am quite prepared to advise any

Apr. 26, 1907.

Mr. George F. Stewart.

of my clients who still have unsold estates in Leitrim to sell at a price representing a reduction of six shillings in the pound on first-term rents. The Crofton tenants got less than five shillings. Of course, they paid it for a shorter period, but as a matter of fact, anyone buying now would pay a shilling in the pound less annuity.

34144. Sir JOHN COLOMB.—It was 4 per cent. interest that the tenants had to pay who purchased on the Crofton estate?—Yes.

34145. Now it is 3¼?—Yes. I think the terms are very much the same.

34146. Most Rev. Dr. O'DONNELL.—If you turn it into years' purchase would the number be the same?—It is very nearly the same.

34147. Sir JOHN COLOMB.—That is on the basis of the annuities they have to pay?—Yes.

34148. CHAIRMAN.—Is that taking into consideration that one is forty-nine and the other is sixty-eight years?—It is the annuity. I should be very glad if some first-term tenants would buy from me at 23½ years' purchase, but they would not do it. What anyone here is ready to sell at is six shillings and four shillings. Six shillings is only 21¼ years'. It is a long way less than the exact equivalent.

34149. Most Rev. Dr. O'DONNELL.—What the tenant contends is that second-term rents are now the current ones, and they stand in that respect exactly where they stood in 1892?—It is a very curious contention.

34150. Mr. SUTHERLAND.—If you calculate all that has to be paid from the beginning to the end of the transaction do you think they are better off than those who are buying now?—According to the *Freeman* tables, they are practically the same. If you leave out the element of the length of the period 18½ years equals 23 years, and six shillings, which I happen incidentally to mention as what would be given, is only 21½ years; so that makes up for the difference in the period.

34151. Mr. KAVANAGH.—What would the annuity on 21½ years' purchase equal under the Ashbourne Act?—It equals the annuity on seventeen years' purchase.

34152. Most Rev. Dr. O'DONNELL.—Your evidence tends to show that in your observation the creation of a peasant proprietary has resulted in making the people improve their holdings?—So I understand, and I should be sorry to think otherwise. With regard to the enlargements of the holdings by the addition of grass lands, it is evident that, with the exception of one or two demesnes, there are no such lands in this district. I have looked at the list of untenanted lands in County Leitrim in Mr. Ginnell's Parliamentary Return, and believe it to be misleading, because the lands mentioned therein are largely either bogs, mountain, or water.

34153. CHAIRMAN.—Mr. Ginnell's return is only of untenanted land?—I understand that.

34154. It does not take into account tenanted land of this kind?—Certainly.

34155. Not even tenanted land let on the eleven months' system?—We have no tenanted land on the eleven months' system here.

34156. You have some under lease?—I have not a single farm in South Leitrim under my control that is what is commonly known as a grass farm. I do not believe that the tenants would leave their present homes in order to migrate to other counties where untenanted lands exist.

34157. Mr. SUTHERLAND.—I daresay you are aware that we have had evidence from a large number of people who are in that position who said they would be very willing to go themselves?—Yes, but I was interested and gratified to find that everyone who gave you evidence to-day about this part of the country bore me out.

34158. I am talking of the people who are in a position and are likely to migrate themselves. We have heard from persons in high positions, priests and a number of others, that they would not do it; but when we came to the people themselves who would be likely to migrate they were all anxious to migrate?—It is only my opinion.

34159. I thought you might modify it in view of the direct evidence we have had from the parties themselves?—You will modify it by your additional experience, which is much greater than mine, because you are getting evidence all round the country.

34160. Sir JOHN COLOMB.—You would be very glad to find your opinion wrong?—Yes. It only illustrates my experience.

34161. You would be one of those very pleased to find it is wrong?—Certainly.

34162. CHAIRMAN.—When you say there are practically no grass farms are you speaking of this particular district or the whole of Leitrim or where?—In all that district I was collecting £17,000 a year, and unless these town parks round Mohill can be called grass farms, I don't think I have a single eleven months' take under me anywhere, nor have I a single grazing agreement under me.

34163. I suppose there are judicial tenants who have got grass farms?—Not in the sense that you have them in Roscommon or Galway.

34164. Evidently there is some grass somewhere, because the figures for the County Leitrim as a whole show that there are 206,560 acres in grass, 79,184 acres under crops, which include hay. In the union of Mohill the figures are 54,604 acres under grass and 22,658 acres under crops, including hay; so in the union of Mohill there is about the same proportion—about five acres under grass to two under crops?—I should imagine that applies to mixed farming. If you have a fifty-acre farm you would find perhaps thirty acres or more of it would be under grass. If it was a five-acre farm you would find three under grass and two under tillage; but I did not take that to be what your lordship meant by grass farms.

34165. Sir JOHN COLOMB.—Is it not the case that in this return grass includes rotation grass?—I should think it means grass on a mixed farm. I have not got it on the Clements, Crofton, or Whyte estate. In 1900 I collected no rent on grass farms, but of course there is grass on them all. They are partly grass and partly crop, and practically in every case there is grass. Therefore I can quite understand the total giving a very large acreage of grass.

34166. At any rate, in your opinion, there is no land suitable for migration?—No; unless you take in demesnes—places like Lough Rynn demesne.

34167. Most Rev. Dr. O'DONNELL.—You don't know of any places in the hands of tenants which can be used for this purpose?—I know of one considerable farm of 200 acres in a tenant's hands, and that is the only one I know.

34168. What should you do with it?—It is mostly in grass, but it is not very good grass. There is a certain amount.

34169. The tenant is a resident farmer?—Yes. Of course, there is this land at Dromard which was mentioned by one of the other witnesses which was bought by two or three people. That might be called a grass farm.

34170. They are tenant purchasers?—Yes. It was never let under an eleven months' take; but it does not come under the heading, because it is now bought out.

34171. By the tenants?—They are, of course, the owners. I think they paid for it in money.

34172. Was it they who bought it themselves?—The owners sold it to the people who bought it.

34173. They were *bona-fide* tenants at the time of the sale?—No; I think they came in and bought it.

34174. There is no public advance. They simply bought it?—No. I mention it now in case you might think I kept anything back in the way of grass lands.

34175. CHAIRMAN.—Take Electoral Division of Mohill in the union of Mohill. There are 262 holdings. There are 84 not exceeding £4 valuation; 83 above £4 and not exceeding £10; 37 above £10 and not exceeding £15; 21 above £15 and not exceeding £20; 15 above £20 and not exceeding £30; 9 above £30 and not exceeding £40; 5 above £40 and not exceeding £50; 7 above £50 and not exceeding £100; 1 over £100 and not exceeding £200, and nothing over £200?—Quite so. The large grazing farm does not exist in our district.

34176. Sir JOHN COLOMB.—You have looked at this return of Mr. Ginnell's?—Yes.

34177. That is simply untenanted land, and included in that would be land on the eleven months' grazing?—I have no eleven months' grazing.

34178. The eleven months' grazing does not come on the rate books at all?—No.

34179. Therefore a farm on hands and let under the eleven months' system is returned as non-occupied, and as untenanted land?—Yes. The value of turbary

close to almost every farm can hardly be exaggerated, and is a great help to the tenants in this district. The difficulty every agent in the county has to contend with is not that the farms are too small, but to prevent their being made smaller by sub-division. I think it would be a misfortune if the very few large farms in the county were cut up and divided amongst the smaller tenants.

34180. In order that grass farms may be suitable for migration there must be turf in the neighbourhood?—I think the people from here who went into a district without turf would miss it sorely.

34181. For migration from a turf country the question of turf would be an essential consideration for the Congested Districts Board?—Yes.

34182. And also a plentiful water supply and good distribution of water?—Yes; it is important.

34183. Mr. KAVANAGH.—What do people who have lived away from turf all their lives do?—They do the best they can. It is a great boon. I have known districts in Limerick where the men had to go fifteen miles for turf, and they did not grumble at it, because their fathers and grandfathers had done it.

34184. Could you compare the price that a man pays for turf with what he would have to pay for coal—you have coal mines in this locality?—Yes. They would not care to use it.

34185. What can you get coal here for?—Ten and twelve shillings. I never heard of them using it.

34186. It is culm?—I never heard of them using it. As to the purchase of untenanted lands in other districts I believe that most landowners would be quite willing to sell their untenanted land (except, of course, their demesnes and home farms) at fair prices, and that no special powers of compulsion are necessary. What I think is required in this county is the establishment of some industries to relieve the land, and this, I think, could only be done on any considerable scale by the Congested Districts Board. Private enterprise and energy have already established some few creameries, such as the one in Mohill, which is a great success, and also some three or four agricultural banks, which are most helpful to the small tenants, and the Rev. Mr. Digges (who has been chiefly instrumental in promoting these, and whom, I am sure, would be willing to give evidence before the Commission if so desired), has also encouraged the keeping of bees. This may appear a small thing to the Commission, but we are dealing with a small people, and therefore small things matter. But I believe there is a great opening for the Congested Districts Board to take up all these industries, and also larger ones, such as the curing of bacon, and possibly establish some textile industry, which would be of great service. The mineral wealth of the county might be further developed. The Arigna Mining Company, of which I am a Director, gives very considerable employment in its district. I may mention we employ over a hundred men a day. I have observed with great regret that the purchase of estates has been followed by an altogether undue cutting of timber by the purchasers. I think it would be a great thing if this could be regulated in some way. That does not apply specially to the Crofton estate. It is a matter of general knowledge all over the country.

34187. Sir JOHN COLOMB.—I suppose in consultation with other gentlemen engaged in managing property you have found that that experience is not an uncommon one?—Yes.

34188. Most Rev. Dr. O'DONNELL.—Is bee-keeping extensively cultivated over the county?—It was taken up, and I believe still is taken up a great deal under the guidance of Rev. Mr. Digges, and I believe a number of these small people did extremely well. I know some cases myself where the people did extremely well, and it was quite a help to their annual income.

34189. Would you say that everywhere if it is possible to find abundant food for bees an effort should be made to spread the industry of bee-keeping?—It would be very useful, especially in a place like this, where nearly every farm abuts on a bog. We all know that heather honey fetches a better price than any other. It is not a very arduous task; it adds to the family resources, and should be encouraged.

34190. Sir JOHN COLOMB.—You mentioned you are a director of the Arigna Mining Company. Is it fairly satisfactory—are you increasing your business?—I think it is satisfactory. We are not diminishing it.

Apr. 26, 1907.

Mr. George F. Stewart.

34191. Where is your consumption?—It goes as far as Longford, Cavan, and Carrick-on-Shannon.

34192. How near are you to a railway?—Three miles from Arigna station to the mines.

34193. The coal has got to be carted three or four miles before it gets on a railway for distribution?—Yes.

34194. Do you consider that your business is interfered with for want of transit. If you had a branch line running to your coal mine do you consider you would be able to meet an increased demand, and do more work?—I think we should if we had a railway into the mine or nearer the mine. But it is a thorny subject here, and I would rather not go into it. There was a disagreement about it here, and I don't think it is a good thing to open up here.

34195. Mr. SUTHERLAND.—Kindly tell us now about the extent. Where do you get the coal. Have you a shaft?—It is a horizontal adit.

34196. Is it long?—One of them is long. I could not tell you the extent.

34197. What is the quality of the coal?—It is not very cheerful coal. It gives a great deal of heat.

34198. Is it anthracite?—No, bitumenous. It is very good for steam coal. We burn it entirely on the light railway.

34199. You employ 100 men now?—Yes; our annual wages bill is about £4,000.

34200. Is the area of the coal large?—Very large, we believe.

34201. Sir JOHN COLOMB.—You are advised by competent experts that it is very large?—We are.

34202. Mr. SUTHERLAND.—Would it benefit you to have direct connection with the present railway closer to the mine?—It would. That is the sore point.

34203. If that were made is it possible you could dispose of more coal?—I think we could if we lowered the price. When we meet the Welsh coal that stops us. It is a mere question of where you meet it. If we could sell coal as cheaply in Mullingar as in Longford we could sell it there.

34204. Do you do anything about mixing the coal; we heard about that?—That is a mixing of culm. We don't do that. With regard to the proposed abolition of the zones under the Act of 1903, I consider it would be almost fatal to the working of the Act, as if every farm was subject to inspection for value and consequent reduction of price—for I have never heard of the Commissioners protecting a vendor by raising the price of a farm—landowners would be most unwilling to sell on account of not knowing how much they would receive for their estates. I know for a fact that this uncertainty operated against the successful working of the Purchase Acts previous to 1903.

34205. CHAIRMAN.—I would like you to divide your point there with regard to congested and non-congested areas. Do you mean that in your opinion the abolition of zones would be undesirable even in congested areas?—I meant it generally.

34206. Are you aware that at the present moment a certain number of estates which need considerable improvement are passing direct from the landlord to the tenant under the Wyndham Act by the operation of the zones?—I understand that they are passing and that the zones clause is in force.

34207. Therefore as there is no inspection as to value these estates which need improvement are passing from the landlord to the tenant direct in an unimproved condition?—That is so.

34208. In the congested areas?—Yes.

34209. Do you consider that a good thing?—I should not think it was a good thing if they were rundale farms and things like that. I don't think that the zones cover that.

34210. Some of them may be rundale farms. There is nothing to prevent an estate which is even in rundale passing under the operation of the zones?—Possibly, if it is a case of rundale. We have no case of rundale. Take, for instance, the Crofton estate. There were no zones in that case. There was inspection, and nothing practically happened from the inspection. Every single farm passed.

34211. Are you disposed to agree then that where an estate is largely in rundale it is not a good thing that it should pass direct from the landlord to the tenant before being restriped?—I should think it was not, but I would like to say in addition to that that

Apr. 26, 1907.

Mr. George F. Stewart.

I am speaking without any personal experience, because I have no rundale estates.

34212. But offhand that strikes you as inadvisable?—I think that the perpetuation of rundale cannot be very good.

34213. The desirability of improving bad estates—the condition of estates in rundale is only a matter of degree. It only means that that is probably the worst class of estate—the estate that most needs improvement; but it is perfectly possible that there may be estates which are not in rundale or very slightly in rundale, but still at the same time require a great deal of improvement?—That may be.

34214. Would not you say also in that case that it might be inadvisable to pass direct from the landlord to the tenants before being improved?—Is it so that the operation of the zones prevents that estate from being considered?

34215. Of course, it does?—I still think from the point of view from which I look at it that I am right. I remember extremely well what used to happen before 1903. Over and over again owners of estates for whom I was acting asked me—"Suppose I sell my estate what am I going to get out of it?" In the old days one used to say—"You may be likely to get so and so, but I cannot tell you just now. It will depend on the inspection." Then the owner would say—"If that is the best you can tell me I will stay on as I am."

34216. That is from the landlord's point of view, which I can understand. There is greater certainty—it goes through more quickly; it is less expensive and so on. That was the case for the zones with regard to the whole of Ireland. But the point which I should like to put is, don't you think where estates are of such a character that they need a considerable amount of improvement by the State that it is not advisable that that class of estate should pass direct from the landlord to the tenant without being improved?—It is better that an estate should be improved, but as a practical question I don't see, suppose a landlord said—"I am not going to enter into any contract for sale at all unless I know how much I shall get," where the advantage to the estate comes in, seeing that it will not be improved.

34217. You remember at the time of the passing of the Act there was a great deal of talk about stereotyping poverty—you remember the phrase?—Yes.

34218. Does it not strike you that if you allow a man to purchase his unimproved holding that as a result after purchase it becomes extremely difficult for either the Congested Districts Board or the Estates Commissioners to improve that—you stereotype poverty?—I have no cases in which I think it would be any harm whatever to sell any of the estates I have under my management.

34219. Perhaps then it is really not fair to ask you that question. All I understand from your evidence is—you, having no poor estates under your management or no estates which need improvement, have not been brought face to face with the question whether the zones ought to be suspended in connection with the point I have put to you?—I should be very happy to leave it as your lordship has left it.

34220. Mr. SUTHERLAND.—But you have made a statement about the zones?—I have.

34221. And it is quite right for us to suppose that you know all about them?—I know about them, having sold numbers of estates under them, and having tried to sell numbers of estates without them; but I only know about estates under my own management. I don't propose to give evidence about rundale estates, for instance, with which I have nothing to do. Speaking of my own experience and of what I see, the Act is working extremely well, and if anyone takes the zones out of it I think it will check the Act enormously.

34222. Can you suggest any way in which a case such as Lord Dudley put forward can be met, because evidently it is undesirable that small holdings should pass on as they are?—Merely because they are small?

34223. No, but because they want re-arrangement?—If it is, as his lordship says, that the operation of the zone clause is such as to take away every possible right to the Commissioners to consider a rundale estate, it could be easily amended to that extent that they could reconsider an estate such as that; but I think if the zones generally were taken away and every estate has to be re-valued, and if every landlord is to be told that no one knows what money he is to get out of his sale you at once stop the operation of the Act to a very large extent, not completely, but to a very large extent, because you could not tell a landlord what he is going to make out of a sale, whereas now you can tell him almost to a £10 note what he is going to get out of it.

34224. The party interested in advancing the money surely ought to know what the nature of the security is on which he is asked to advance the money?—I am sure he does, because the very same authority which would inspect the farm is the same authority that has already fixed the rent. Every farm that would be under the zones has been already inspected by the very same authority or a branch of it, for the Land Commission and the Estates Commissioners are very nearly the same.

34225. CHAIRMAN.—But an enormous number of estates have been settled out of court?—Yes.

34226. Mr. SUTHERLAND.—If they are valued already there can be no objection to seeing them again?—The whole element of uncertainty is introduced. We know that by experience.

34227. Sir JOHN COLOMB.—It is not so much the question of value as the question of uncertainty?—That is the point I am addressing myself to.

34228. Where the landlord agrees with his tenants and they sign an agreement, that is the basis of the landlord's willingness to sell and the tenant's willingness to buy?—That is so.

34229. From the time of signing the agreement the tenants only pay 3¼ per cent. interest on the purchase money?—Yes.

34230. And until the sale is completed the landlord receives only interest on the purchase money?—Yes.

34231. Meantime he has to meet charges, if the property is encumbered, perhaps 5 per cent. charges, while his income is reduced. If there is inspection, and the Land Commission does not approve of it, the landlord must have been accumulating arrears in the meantime?—He must, of course.

34232. By reason of the fact that the interest is less than the former rent. After a long interval of uncertainty this point arises: if the Estates Commissioners don't accept it he has either got to take a sum he never would have agreed to take or he has got to resume possession with arrears on his holding, and the whole difficulty arises as between landlord and tenant all round the property?—Very much accentuated.

34233. Is that so?—Quite so.

34234. Is there not another element in the matter; that those fixing the price are an interested party in the price?—I think so.

34235. It is not as if it was an impartial tribunal outside, but the Estates Commissioners have to consider that it is their business to secure the State first of all?—Yes.

34236. Therefore, it is not an intervening organisation coming in to settle the difference, but it is one of the parties to the difference?—So I think.

34237. Mr. SUTHERLAND.—Who are the parties you refer to?—Sir John Colomb says the Land Commission are the parties representing the Treasury who have to find the money and have, finally, the fixing of the price.

34238. Are they interested pecuniarily in any way?—They are, as trustees.

34239. Seeing that the purchaser has to pay?—They like to show a good bargain.

34240. I have no fault to find because you are perfectly frank about it. You say your objection is you never knew them to raise the price of a farm?—Never, and I never heard of anyone else who did; and no one ever told me that on inspection the Land Commission said, "This tenant is paying too little."

34241. They have always said that the vendor was asking too much?—Either that, or that it was all right.

34242. Sir JOHN COLOMB.—You agree that it is undesirable, in the interests of the State, that property in rundale or uneconomic holdings should be stereotyped?—I think it is.

34243. I suppose, with your experience, you don't regard it as quite impossible to maintain the zones and yet make arrangements by which the difficulty of stereotyping might be got over?—Certainly.

34244. But you are decidedly of opinion that the abolition of the zones would have the effect of stopping

land purchase?—Yes. That used to be the difficulty in the old days.

34245. Mr. KAVANAGH.—With the existing law the landlords cannot change rundale for their tenants are all judicial tenants?—I do not think they could.

34246. Or uneconomic holdings; without the consent of the tenants they cannot re-arrange them?—Of course they cannot.

34247. Therefore, it is hardly fair to make them go outside the zones for a thing they cannot change?—It is not the fault of the landlord.

34248. However much they wish to change the whole estate for sale, they cannot do so under the existing law?—They cannot.

34249. CHAIRMAN.—It can be done by the consent of the tenant?—Yes.

34250. There is nothing to prevent the landlord doing what the Congested Districts Board has done; it may be more troublesome, but it has been done; the landlord has, with the consent of his tenants, even since the Act of 1881, re-arranged the holdings?—I am sure that may be the case.

34251. Most Rev Dr. O'DONNELL.—I am anxious you should first elucidate an answer to Sir John Colomb and Mr. Sutherland. You said, I think, it was unfair that one of the parties to the bargain should fix the price?—Yes. I did not originate that statement, but I fully accept it.

34252. The Estates Commissioners are in question?—Quite so.

34253. Needless to say they are not buying for themselves?—They are not.

34254. Nor are they buying for the State?—They are buying with the State's money.

34255. The other party would be the tenant, probably?—Of course it is obvious as between the tenant and the landlord it is a fair deal, but still I think it is fairly clear if there was a substantial loss owing to the non-payment of annuities or anything arising out of the sale the Estates Commissioners would undoubtedly be blamed, and therefore, to that extent, it is not unfair to say that they are a party to it, though they are not a principal party to the transaction.

34256. They are salaried officers with a perpetuity during their lives?—I am not making any reflections against them morally.

34257. No; you do not say anything to suggest that at all; but they are scarcely appointed to make a good bargain for the State, or a good bargain for the tenant, but to discharge a public office efficiently?—Yes; but I think myself that I could imagine a condition of things in which they might fix the price with the understanding that if anything went wrong, and if the price happened to be too high they would incur a certain amount of blame, while, if it was too low a price they would incur a certain amount of praise.

34258. Is not there much more danger of the obstacle coming in through the medium of the County Councils. Would not it be much more likely that they would intervene, in case the tenant purchasers made default, to stop land purchase. If the tenant purchasers made default the default would fall upon the ratepayers of the counties, and the County Councils then would, we might anticipate, put a spoke in the wheel of land purchase and require some supervision of the terms so as to secure that the ratepayers would not suffer owing to the default of annuitants?—Of course as to such a change in the land law I can quite conceive that time may bring it forth.

34259. I suppose without the zones such a state of things cannot occur?—The last state might be worse than the first. I think it would.

34260. The County Councils might then interpose quite as serious an obstacle as would arise from the abolition of the zones?—I accept your lordship's hypothesis.

34261. Only one other point to elucidate what you were saying to Lord Dudley. Of course the zones apply only in case of tenanted land. It is not a question which comes up in the case of untenanted land?—It does not.

34262. At present it is considered so desirable that certain estates should be improved before passing from the landlord to the tenants that the zones don't apply in the case of purchases by the Congested Districts Board; you are aware of that?—Certainly.

34263-4. Would not that support the point Lord Dudley put to you, in the case of certain estates that there should be a careful inspection and a careful reformation of the property before it passes from landlord to tenant? On poor estates, rundale estates? To say whether it was a proper estate to be sold at all or not. Or to say whether the estate should be sold, and if not to take steps to have such a re-arrangement as will make it a proper estate to be sold?—Well, I cannot say it is right to sell an estate that is not fit to be sold.

34265. CHAIRMAN.—There is an improving authority?—I understand the Congested Districts Board to be an improving authority.

34266. Most Rev. Dr. O'DONNELL.—Should not it pass through that process before being sold?—There are estates, I daresay, that should.

34267. I think it will make it easy for you if I say what probably you won't be surprised at, that in the sale of tenanted land to the Congested Districts Board apparently the owners have not felt much difficulty in dealing with the Congested Districts Board because of the fact that the zones don't apply in those cases. As far as I know the bargains have gone on quite freely?—I am not at all saying a word against the Congested Districts Board. They have worked extremely well. As to the suggestion which I believe has been made, that estates which are encumbered with mortgages should, therefore, be sold cheaper than unencumbered estates, I think this is not reasonable. Such mortgages may be paid off, or the interest under them reduced, at any time that the circumstances of the owner admit. I personally know of two estates in this county where the mortgages have recently been cleared off, or largely reduced, and I think it would be ridiculous to suggest that in consequence the tenants, if now purchasing, should pay a higher price than they should have done last year, or a year or two ago. I consider the financial position of the landlord has no more to say to a fair bargain between him and his tenants than the financial position of his tenant has. Moreover, every tenant is financially a gainer by a sale, and no one—except a churl—grudges him this advantage. Why then should an unfortunate encumbered landlord be differently treated?

34268. CHAIRMAN.—When you say that every tenant is financially a gainer by a sale do you mean an immediate gainer?—Even more, because he gets the farm for nothing in the future.

34269. Suppose you have a very poor estate on which there are a considerable number of arrears?—I will assume it.

34270. And where the landlord has been considerate and has not pressed. Sometimes in the West of Ireland, on such estates, tenants buy to get an immediate reduction by reason of the fact that the annuities don't amount to the rent, but they find, instead of having a complaisant landlord to deal with they have a very strict State to deal with, and they have to pay up those annuities within a short time of the time they are due; do you mean to say that they are financial gainers by purchase?—According to any form of figures they are.

34271. On paper they are; but are they in reality?—I think they are. I think the great majority of them are. I know that the fact of having to pay up to the day is inconvenient. Every agent knows that because they are always being asked for time, not unnaturally, but, at the same time, the tenants, I do think, are financial gainers. It never would have struck me that that was open to question.

34272. You think even where a man's livelihood is derived from precarious sources, such as from fishing, from migratory labour, or from remittances from America, or from any industry that may not be stable, and not from the land, that in that case he is a gainer by purchase?—I think every tenant I have ever sold to—and I have sold to a great many—looks on himself as a financial gainer. I know they do complain of having to pay up more sharply than we used to make them, but we say still, that the tenant is a financial gainer, and he is a tremendous gainer in the future, because he gets the whole place for nothing.

34273. That presupposes his power of paying the annuity for a certain number of years?—When one deals with tenants as I have done it is a very common thing to be told that a man's father and grandfather, and perhaps half a dozen other grandfathers have all been on the farm. I think it is a very natural and right and proper thing. If generations in the past have managed to live on the holding, and the family

Apr. 26, 1907.

Mr. George F. Stewart.

are there still, I think it is hardly fair for your lordship to hold that there is a serious doubt that they won't be able to live there for one generation more.

34274. I suppose there are holdings in Ireland, as there are in England, where some families have been for a long time?—An immense number. There are heaps of people whose family has been on the one holding for a very long time. It is immensely to be desired.

34275. CHAIRMAN.—But they are not all like that by any means. Your statement covers practically all holdings.

34276. Sir JOHN COLOMB.—Lord Dudley gave you an illustration of a tenant and a considerate landlord who will give time. May I ask you this; with your vast experience of tenants and property in Ireland, would you say that as a rule the tenants on well-managed properties, where there is a great strictness in payments of rent are most of them really better off than the tenants with too considerate landlords who are allowed to get into arrears?—I certainly think so.

34277. Because from father to son they have had under their hereditary obligations learned to be prompt in their payments, but in cases where arrears accumulate and the tenants get up to their ears in arrears difficulties arise?—Yes.

34278. We all know that the State insists with much greater strictness on prompt payments than many private landlords, but you would not altogether say that as a rule the tenant loses so very much, or loses anything from strict enforcement of payment than before?—I think not. Of course there are exceptions.

34279. CHAIRMAN.—There might be exceptions?—If your lordship thinks I ought to take out the word "every" I will say "tenants."

34280. Obviously there must be holdings—I won't say estates—in the poorest parts of Ireland, where occasionally, owing to the failure of the potato crop, or the fishing, or something else, on which they depend, it is impossible for those people to pay rent, or, at any rate, what is considered the normal rent?—I can imagine that quite easily.

34281. As long as that man is under a landlord there is always the possibility that he will be given time or released for his obligations for that year, to meet an exceptional time of distress, but if he becomes a purchaser there is no such possibility?—I should hope there was.

34282. I don't think there is. I don't think there is any machinery?—Surely if there came another famine the State would have to meet it. I am not at all suggesting any repudiation or any nonsense of that sort, but I do say if there came to be a serious crisis, such as your lordship suggests, I cannot see why the State should not meet it.

34283. It would be physically impossible to collect the rents on the holdings described, because the people could not pay them from the land, but under the machinery as it stands, I don't think there is any provision for the State waiving its right to collect the annuities?—No.

34284. And you would not have a wholesale alteration. You are not likely to, unless you had a wholesale famine, which I am not contemplating. But if in a particular district like the Rosses of Donegal, suppose the fishing was to absolutely fail for a year or two, or the demand for migratory labour was to fall off, it might be possible that for a year or two these people might be unable to meet any obligations. If they are under a landlord the landlord has the power not to press for what he is entitled to, but there is no such machinery with regard to tenant purchasers?—No. In that way I think the whole purchase system is unfortunate, but it became necessary.

34285. At any rate, in a case of the kind it is questionable whether a man is really a gainer by becoming a purchaser?—I purposely put in the word "financially." The landlord might sell his estate and invest it in a stock which unfortunately failed.

34286. He is not likely to choose the moment when the tenants would not be able to pay rent. It would not be the high-water mark of price?—No. I wish to add this. It appears to me, in regard to this difficulty about the flotation of money, which means charging the counties, which appears to me to be one of the gravest conditions which we have to face, if land stock stood at its proper price in relation to consols it ought to be at 93. It is a $2\frac{3}{4}$ per cent. stock as against a $2\frac{1}{2}$. Both are secured by the Government, yet both are within a fraction of each other at 85. I don't know what the reason is. I have been given one or two reasons which don't seem to me to be quite adequate why the $2\frac{3}{4}$ stock should stand at 85 and a fraction and the $2\frac{1}{2}$ per cent. stock at 85, practically the same price. If they stood in the relative ratios of $2\frac{1}{2}$ to $2\frac{3}{4}$, which is the interest they bear, Irish land stock would stand at 93. If it stood at 93 I imagine it would greatly ease the whole financial difficulty which arises from the loss on the flotation of stock. I have asked stockbrokers the reason and the reasons advanced seemed to be, some of them, inadequate. They say the Land Stock is not fashionable on the English market; that an element of uncertainty seems to be attaching thereto, and they say it is not a large stock, and therefore is not dealt with in very large amounts; and I think the reason was given to me that thrown on the market as it is in lumps of five millions it tends to dislocate the market. I am not coming before you as an expert, but I think in regard to this matter of the county guarantees, and the loss on the flotation of stock, that we all feel it to be a most serious development which threatens to block sales very much; and I cannot help thinking that it must be within the competence of some first-rate financial expert at the Treasury to discover some means to set right the defect caused by the fact that land stock does not stand at the same price, relatively to its interest as consols.

34287. I may refer you to the answers given by Mr. Mullins, stockbroker to the Bank of England, when examined before us on this point.* As far as I remember, he told us, that in his opinion, the reason for that difficulty which you have mentioned was that consols were so much more quickly realisable than guaranteed land stock, that a man could realise consols very rapidly, whereas he might not be able to realise guaranteed land stock so rapidly, and also that there was a special market for consols which lead to considerably greater dealings in them than in other stock. He told us too that many banks were forced to hold their reserves in consols and that that led to a demand?—Still it does seem to me that it ought to be conceivable that the Treasury people should in some way make the two stocks equalise. My recollection is that the financial arrangements of the Act were taken on the basis of the stock being taken as worth 95. Therefore if it was at 93 the loss would be very small indeed.

34288. Most Rev. Dr. O'DONNELL.—It was generally assumed that the land stock would stand as high as consols making allowance for the difference in interest, and that the two would move proportionately?—It is eight points too low. It ought to be at 93. There ought to be eight points difference between it and consols, and there is not one.

34289. Most Rev. Dr. O'DONNELL.—Did it occur to you that any Irish banking houses could be brought into the issue of the stock?—The stock can be registered both in the Bank of England and the Bank of Ireland just as consols can. One reads that the Chancellor of the Exchequer buys a great many millions of consols every year to extinguish them, and it struck me that if he bought a great many millions of Irish land stock the British taxpayer would gain as he would be extinguishing a $2\frac{3}{4}$ per cent. stock instead of a $2\frac{1}{2}$ per cent. stock. It would help us if it put the price up.

34290. Sir JOHN COLOMB.—In the case of consols you have 700 millions, and in the case of Irish land stock you have only, I believe, about fifteen millions issued so far. Where you have a restricted market like that with very small issues obviously if the Chancellor of the Exchequer went in to buy he would enormously inflate the stock?—That is what I want to see done.

34291. Therefore he is inflating the stock which he is to buy himself, a result which is not so appreciable when he is dealing with 700 millions?—Still he could buy up to 93 and incur no loss.

34292. Don't understand me to be differing from your opinion, for I regard this question as about the most serious question that has arisen?—What I am afraid of, and I daresay you are apprehensive of the same thing, is that people on the other side of the water, not knowing anything about it, will fancy that it is due to a default of payment, which it is not. I am sure they will say it is our fault.

* See Appendix to Fifth Report of the Commission [Cd. 3630, 1907], pp. 17 *et seq.*

34293. Mr. SUTHERLAND.—Has the recent call on the guarantee affected the stock?—No; nor is that what I am afraid of. What I am afraid of is that it will check purchase entirely, check the whole operation of the Act.

34294. Do you think the call on the guarantee would give less confidence to the public?—No. I don't think investors going to buy any stock understand anything about the guarantee. The security is not in any case affected. It is a Government security at bottom.

34295. The fact that it was called on at all might affect nervous people though?—It might, but I hardly think so. What made me take up your time is that it might check the operations of the Purchase Act enormously by the tenants not buying any more, because what they gain on the one hand they lose on the other.

34296. May they not have an idea that the Irish tenant is paying too much for his land?—Perhaps they might.

Apr. 26, 1907.

Mr. George F. Stewart.

Rev. PATRICK DOLAN examined.

34297. CHAIRMAN.—You have been kind enough to give us a memorandum which is so very long that we shall not be able to read it through to-day.* Will you take it as read, and let it go in *en bloc*, and then you can tell us in your own words any points that you would wish to emphasise?—Very well. The first point is with regard to drainage. In the Aughavas Electoral Division there are streams that flow into a large river called the Black or Cloone River, and great damage is done by the floods. Here is a statement by one of the parties aggrieved. It is a sample of the rest, who number about 75. He states—"That the greater part of his meadow land, together with six acres of his pasture lands adjoins one of these streams, and that they are injuriously affected by its floods. The aforesaid meadows produce 25 cocks of hay annually. The floods drive in sand and coarse gravel which injure the hay that frequently five or six beasts die some years, and he must sell the remainder of his stock. The pasture land is covered with water, so that cattle cannot be turned out to feed on it. He estimates his losses occasionally at about £20 a year." This man's valuation is a little over £20 a year.

34298. We have heard a great deal about drainage all over the county, and I think we may take it that your view is that a great deal more attention ought to be paid to drainage?—We applied to the Congested Districts Board in Dublin to get help to carry out this drainage ourselves. After various communications passed they offered to give us half the amount. The amount was to be altogether £267 10*s.*, the tenants undertaking to do half of it. This agreement was accepted by the tenants, but one landlord refused to give his consent to have the drainage carried out, which would not be any loss to him, but would, in fact, improve his property The reason he gave was that he was negotiating the sale of his estate and when it had passed from him, the people could look after it themselves. The Board in Dublin stepped in, and said that until we got all legal obligations satisfied they could not assist us.

34299. Who is this landlord?—Mr. John Madden, of Hilton Park, Clones.

34300. What power had he to prevent the tenants from draining their land?—The Board required the consent of the landlords to guard them against consequential damages resulting from the drainage. What I find fault with the Congested Districts Board for is that they broke away from us and did not assist us, though we undertook to incur legal risks on the part of Mr. Madden, to carry out the drainage to benefit the people. The last statement made by the Board was in February last year when it wrote that as there was a Commission sitting inquiring into the laws relating to the drainage of land it might be no loss of time if the local committee awaited the result of the inquiry. I see in the newspapers that the report has been presented, but I think the Prime Minister said that no action could be taken for a considerable time on the report as the Government had more important business to look after. In the meantime the people are suffering. On the one farm I give you an example of the actual loss that affects some seventy-five farmers.

34301. You consider that is a strong illustration of the need of the power to deal with drainage questions?—Yes.

34302. Describe to me what kind of drainage this was that you contemplated?—There are a number of streams which, as they pass along, become greater and empty themselves into the larger river which is under the drainage board in this county. When heavy rains come these small streams rise very quickly and the country is flooded, almost into a lake, so that sometimes even the people cannot pass over the public road.

Rev. Patrick Dolan.

34303. What do you propose to do to get over that?—The Congested Districts Board offered us half and we were to do the rest of the work by voluntary labour.

34304. How do you propose to arrange it so that the water must flow off?—A drainage committee was formed of the people in the district composed of all the farms affected by these streams, and they all severally undertook to carry out the drainage of the river as it passed by their own lands.

34305. Were they going to widen the banks?—To sink the river and widen the banks so as to carry it out to the satisfaction of the Congested Districts Board engineers.

34306. And to deepen the river?—Yes.

34307. You were satisfied that it was a work that the people could do themselves as far as labour was concerned?—Yes, assisted by the Congested Districts Board grant.

34308. Most Rev. Dr. O'DONNELL.—Would it be necessary to have engineers?—No. It is a very plain thing.

34309. And does not require exceptional direction?—No.

34310. Was there any big obstruction like a rock to blast away?—Yes.

34311. I suppose that the people would know how to do the blasting?—That was understood in the work and so much money allowed.

34312. CHAIRMAN.—Where was it thought that the consequential damages would occur?—I think that is a form by which the Congested Districts Board carries out its work. They ask for this guarantee.

34313. Had they no particular lands in their minds which they thought might be more flooded than before owing to the increased amount of water turned down on them?—As far as I understand it is the general rule to put such words in the form of the Board, but they had no particular lands in their minds.

34314. Most Rev. Dr. O'DONNELL.—Persons lower down might object on that ground?—No; because it empties at once into that stream that is looked after by the drainage board of the county.

34315. CHAIRMAN.—Suppose this was done, have you ever considered if any steps should be taken to see that that work is maintained after it is done. Suppose that the river was to silt up again, or suppose obstructions were to occur again which resulted in a partial return of the flooding, what steps would you propose to take?—I think our local committee would look to it, as they had done so much in expending their own voluntary labour on it and they would benefit so much.

34316. How do you propose to set about that?—It having been done in the first instance, I suppose the following year the same committee would remain standing as a parish committee to look after it from time to time.

34317. It might occasionally want a little money spent on it to keep it in repair?—It might.

34318. How do you propose to do that?—I think once it got into good working order it would be in the interests of the people to do it themselves.

34319 The interests of each tenant?—Yes.

34320. Suppose you had a stupid tenant, not sufficiently enlightened to take that point of view, who neglected his portion, what steps are you going to take to bring him to his senses?—We should have no legal powers, only voluntary effort.

34321. Does not it amount to this, that if drainage is to be done at all it should be done under some arrangement by which there should be a body who could see to the maintenance of the drainage, if it was done?—Yes, but I suppose you are referring to larger schemes than this partial work in my parish.

* See page 270 *et seq.*

Apr. 26, 1907.

Rev. Patrick Dolan.

34322. If you had a body on which you could put all drainage, large or small, would not you be disposed to think that all men who were too lazy to keep their portion of the drainage in working order and might thus wreck the future of your scheme by their laziness or foolishness should be in some way coerced to do their duty?—Yes.

34323. May I ask you whether the proposed arrangement with the Congested Districts Board would have been a satisfactory one if carried out?—Yes.

34324. But was the drainage board into whose jurisdiction this extra flow of water was to come, a party to this agreement at all?—They were not parties to the agreement.

34325. Do you know if they were approached as to whether they would raise any objection?—I am not aware.

34326. Most Rev. Dr. O'Donnell.—They are only a maintenance body?—They are only a maintenance body.

34327. Sir John Colomb.—You have no reason to believe that they raised any objection?—No.

34328. The whole thing fell through owing to one landlord in the district objecting to give his consent?—Certainly.

34329. Chairman.—Would you go on to the point?—The next point is roads. I suppose it is the usual statement. There is a great want of accommodation for the people in the district. They live off the main roads in long lanes. In the old times these were what were called the main roads of the country. There were no grants in the district I live in in the past. Under the Grand Juries the public roads were only made with a view of going from town to town. The people living shut in in fields away from these main roads have great difficulty in bringing their produce to market.

34330. Sir John Colomb.—You think the Congested Districts Board should improve all the main roads?—No; but they might act in a more liberal spirit than they have done in the way of making grants to these people to improve their passes. One-sixth of the cost is a very small grant to encourage them to do the work.

34331. Mr. Sutherland.—Are you speaking of the parish scheme?—Yes. I am confining myself to local wants.

34332. Most Rev. Dr. O'Donnell.—Have your parish committee got six times the amount of work done that the grants would represent?—Wherever they have undertaken work they have done that.

34333. Chairman.—Your view is that these people should contribute something towards the cost of these works?—Yes. They actually do under the system of the parish committees. They are allowed a certain proportion of the work they undertake, sometimes one-fifth and sometimes one-sixth, but what I complain of is that that is not sufficient encouragement to them to improve their places.

34334. Most Rev. Dr. O'Donnell.—If you had larger grants you could get much useful work done?—Yes; most useful work.

34335. Chairman.—Is the contribution raised by the parish committee actual money?—Not money, but labour.

34336. Do you say that where these works are done the contribution of the locality should be in the form of labour, or do you say it should be a contribution, however small, of money?—I don't think the people would contribute money. They have also to maintain the public roads.

34337. Most Rev. Dr. O'Donnell.—These would not be county roads?—They would not. They would be roads to houses.

34338. On which a cart might go?—Yes.

34339. At the present moment it is very difficult to use a cart?—Yes.

34340. Chairman.—Are these roads not under the District Council?—No; because they enter into the farmers' places a distance into the fields. They are what are called passes.

34341. The District Council has a certain amount of road work under its control?—Yes.

34342. Where does that cease?—They cannot give any assistance to make these by-roads or passes.

34343. The District Council have certain duties with regard to making roads?—Yes, but they cannot legally interfere to make these passes to the houses, since they have not any end; they do not go to any place beyond the dwellings of the farmers inside. Sometimes on one of these passes or sideways there are 100 farmers, and sometimes there are 20.

34344. That is a blind road generally leading up to houses; but take the question of small roads running from one main road to another, the object of which is to open up some holdings and give access to a certain amount of land: is it nominally the duty of the District Council to make a road of that kind?—Yes, that is their duty; that is looking after county work.

34345. That would be considered a county road?—Yes.

34346. In that case they would make the road and levy a rate upon the district to do it?—Yes.

34347. These roads which you have in your mind are roads which are of considerable benefit to individuals but which could not be charged for by a district rate?—Yes.

34348. Sir John Colomb.—They are not presented for?—They are not presented for.

34349. Most Rev. Dr. O'Donnell.—You don't think a better way can be devised than to get them done through the labour of the people with little grants to help the construction of the roads?—No, I do not; because the people complain of any further rates being placed upon them.

34350. Sir John Colomb.—You mentioned one district where there were 100 holdings situated on the road?—Yes.

34351. What is the length of the road that is needed?—I could not say the length of the road.

34352. Could you give it approximately, because 100 men each giving two or three days' work could do an immensity if they combined, and therefore if you could give me some notion approximately of the length of the road required where these 100 men will benefit I would be very glad, and I think the Commission would be glad to have it?—An example of bad road accommodation has been brought under my notice by the Parish Priest of Cloone with a view to placing it before this Commission. This road leads from Cloone to Carrigallen, with a branch from Dromlohan National school to Gubb's cross-roads. It has three very steep hills, probably a gradient of one in five, and is more than a mile long. Over 100 families live along it. They have the greatest difficulty in getting to the main road. Half loads only can be carried.

34353. Chairman.—That is not a blind road?—Yes, but it is not kept or maintained.

34354. Why is not that road maintained: I am only asking for information: is it not nominally the duty of the District Council to maintain that road?—If it attended to all these roads the rates would go up. The District Council only selects certain roads from time to time to repair. Very likely they repair a road like that once in five years.

34355. Sir John Colomb.—That road is presented for?—Sometimes.

34356. There is a special presentment to do a certain job or repairs, and then it is dropped again?—Yes.

34357. Chairman.—This is nominally a county road and the only thing that prevents the county authority from setting it right is the fact that if they spend money upon it the rates would be raised to a point that would press very hard upon the people?—Yes.

34358. Suppose that the Congested Districts Board were willing to make a contribution for the maintenance or improvement of such a road in your opinion which would be the better way of doing it for them: to make a grant in aid to the recognised authority that had been created by statute to maintain these roads or to make it to a body like the Parish Committee, a body of private individuals in the district?—Far better to the county body.

34359. You think the best plan would be to make it to the county authority?—Yes; if the Congested Districts Board gave a contribution that would be far the better way.

34360. Because otherwise you will divide responsibility?—Yes.

34361. Most Rev. Dr. O'Donnell.—That road is on quite a different footing from roads up to private houses?—Quite so.

Most Rev. Dr. O'Donnell.—The Clerk has been good enough to say to me that the particular road is not on the county. If it is not on the county the Congested Districts Board is perfectly free to aid.

Mr. Sutherland.—Then what would happen after the road was put into repair.

Most Rev. Dr. O'Donnell.—It ought not to be put

into repair, I would say, except the county took over the road for maintenance.

34362. CHAIRMAN.—Can you make a county road and then say, "We will have nothing more to say to it"?—They might postpone a road for four or five years and then give a contract for a year.

34363. Most Rev. Dr. O'DONNELL.—Sir John Colomb asked you to give an instance not of that class of road but of another class which would simply accommodate a number of families?—Yes. I know such a one about a mile in extent. Along the sides of that there are about thirty families. That is a blind road. These families are spread along the sides of that lane. There is no person to make it.

34364. Sir JOHN COLOMB.—Is there a road there at all?—What you would call a kind of road, a pass.

34365. You could get a cart along it?—Yes.

34366. Has this road gone out of repair?—It was never made by the county.

34367. What is wanted is that that road should be put into repair by the Congested Districts Board or whatever Board it is?—Yes.

34368. Most Rev. Dr. O'DONNELL.—Does it deserve the name of a road as it stands?—It is so, but I would not call it a public road in the sense of being sixteen or twelve feet wide. It is about eight feet wide.

34369. It would be a road over which a vehicle could struggle but not a road over which a horse could carry a fair load?—No.

34370. Mr. SUTHERLAND.—It is one of these minor improvements that you think the Parish Committee are adapted to deal with?—Yes.

34371. What would the cost of one of these be—a shilling a yard or two shillings a yard?—That would meet it certainly.

34372. If you got half of that from the Congested Districts Board would the Parish Committee see that these places would be put into proper repair?—Yes, and that is a work that the Parish Committee could carry out.

34373. Could you maintain these afterwards—you could not expect to go back to the Congested Districts Board again?—I would hope and suggest that the farmers who are accommodated would take an interest in it and keep up the improvements so that things would not go back to their old condition.

34374. Perhaps no money resources would be required for maintenance, and in that case could the people be got to give their own labour for maintenance?—Yes. In reference to Parish Committees I consider that the proportion granted in many districts is not able to meet the necessities of the case. I think one-third or one-half should be allowed in certain districts. There is sometimes a great difficulty in getting materials. They have to go long distances.

34375. CHAIRMAN.—What are you referring to now?—With regard to making out-offices and all those small buildings, adding rooms to the house and various things of that kind, materials are very hard to be got sometimes in certain districts. That is the case where I live. The proportion in general is not sufficient to encourage the people to improve their situation.

34376. Most Rev. Dr. O'DONNELL.—Where there are costly materials, such as windows, slates, and so forth, a bigger proportion would be necessary?—Yes, but they only allow one-fifth in the case of such works according to the rules.

34377. Sir JOHN COLOMB.—In practice do you find you can get four-fifths of the work done?—Yes, but these Parish Committees would be still more beneficial if they got greater help to carry out these works. I also suggest that the maximum valuation should be increased from £7 to £10, because most of the farmers require this help as well as those under £7.

34378. CHAIRMAN.—You wish to refer to technical education?—Yes. The question of domestic economy should get more attention. I do not think there is much use in lectures. I would prefer that instructors should enter the dwellings of the farmers and show them how things should be done.

34379. That is a matter more for the new department than for us?—Yes, but I thought you were looking after the improvement of the district.

34380. Most Rev. Dr. O'DONNELL.—The Congested Districts Board does supply instructors in domestic science. Therefore any application in that line would be quite within the province of the Board to accede to?—Without finding fault with the system of the Department, of instructors giving instruction in classes, I would prefer to see them going into the houses of the farmers showing how meals should be prepared, how to clean up the house, and how all the ordinary duties of home life can be carried out to the greatest advantage.

34381. CHAIRMAN.—If you adopt that method that is suggested of placing districts in charge of technical instructors of this sort would not you have to increase your staff and duplicate your instructors perhaps; that might be a better process but it would be a more lengthy one?—It would be more satisfactory in the end.

34382. You could not expect the instructress to cover such a big area?—She could choose certain houses about five or six at a time.

34383. Sir JOHN COLOMB.—To take one house with ordinary appliances where all would come to be shown how to cook a dinner?—Something like that.

34384. CHAIRMAN.—And invite other people to come into the house and see it?—Yes, the surrounding families, not from a distance.

34385. Sir JOHN COLOMB.—Lectures that are given are rather over the heads of the people. It is a great deal more practical to go into their houses under ordinary conditions and get five or six people to come in and show them how to do it?—Yes. Those public lectures are of very little use to them. They are very good in theory, but they don't use them in their own houses.

34386. CHAIRMAN.—Then as to emigration?—There is a great deal of emigration from my part of the country.

34387. Sir JOHN COLOMB.—Of the young and the strong?—Yes.

34388. Leaving behind the old and infirm, the less enterprising and the weakly?—Yes, and farmers complain of the want of persons to help them in their labour, and the consequence is that tillage is going down. They are only cultivating sufficient to satisfy the wants of the house.

34389. That is adverse to the agricultural interests of the people themselves and of the district?—Yes. This is also affecting the attendance at the schools, because when the grown up boys and girls go away the school children are pressed into the service, and there is no attendance in the schools practically for six months in the year from the spring until the harvest. In this respect County Leitrim is ranked one of the lowest counties in Ireland.

34390. CHAIRMAN.—Child labour is wanted to take the place of the older labour?—Yes, of the older labour gone to America and other countries. I also wish to advocate the extension of the congested area.

34391. Most Rev. Dr. O'DONNELL.—There are some places not scheduled which are as poor as the congested area?—Fully as poor, and often worse.

34392. Mr. SUTHERLAND.—Have you any general suggestion to make on that point?—I think that the whole County Leitrim should be scheduled.

34393. Other counties will ask why Leitrim if not they?—If they have a claim as good as Leitrim I do not see why they should be excluded.

34394. You would give power to whom to do that?—I don't know who has the power now, but I know the Lord Lieutenant created one in my parish in former times.

Sir JOHN COLOMB.—That was within twelve months of the passing of the Act.

34396. Mr. SUTHERLAND.—Would you propose to give power to the Lord Lieutenant to deal at any time with any place that the Congested Districts Board would recommend to him?—Certainly.

34397. CHAIRMAN.—You would like to see the whole county scheduled?—Yes.

34398. You think on the whole that that would be the most satisfactory plan?—Yes; the wants of Leitrim and the difficulties are the same in most cases, and it appears quite strange how some places are chosen and others left out.

34399. If the whole county were scheduled you would not go so far as to say that every parish should be entitled to a parish committee?—I think that is the idea of the Congested Districts Board.

34400. To have a parish committee in every single parish?—Yes.

34401. I suppose there are places in Leitrim which are comparatively prosperous which if they happened to be in Westmeath or Kildare, you would not suggest

Apr. 26, 1907.

Rev. Patrick Dolan.

for a moment should be scheduled?—I am only speaking of the County Leitrim.

34402. I suppose that there are parts of the County Leitrim in which the valuation is far higher than the thirty shillings limit?—Yes. There are some parts more prosperous, but I think all the districts are such that they are poor enough to be placed under the Congested Districts Board.

34403. There are districts in it and considerable districts that require remedial treatment?—Yes.

34404. CHAIRMAN.—Are there no bright spots in the county too?—Yes. They are small in area.

34405. There are one or two portions where the people are fairly well to do?—I do not know the County Leitrim all in detail, but as far as I know it I think there are none of those.

34406. Suppose there was such a parish in the County Leitrim and you schedule the whole county you would not suggest that in that sort of parish, there should be a parish committee?—No, I would leave that to the Congested Districts Board in Dublin to determine.

34407. You would leave absolute discretion to the Congested Districts Board as to where they would establish a parish committee?—Yes.

34408. You would not say that because a parish was scheduled it necessarily became entitled to a parish committee?—No, I would not say that.

34409. Most Rev. Dr. O'DONNELL.—Anything about industries?—There are no industries in my part of the country. I do not think they can be carried out, but some means should be given to the farmers to improve their houses. The labourers now are getting very fine houses, very healthy places to live in, which will be a great benefit, but no opportunity has been given for improving the farmers' houses as to which there is great room for improvement.

34410. CHAIRMAN.—They can get a loan from the Board of Works?—Yes, but there is a great difficulty in getting loans. A tenant may have bought out his place and he will get a loan from the Board of Works at 5 per cent., but if the tenant has not bought out his place the loan is limited to three times the valuation, so that a small farmer with only £5 valuation can only borrow £15.

34411. Sir JOHN COLOMB.—£5 valuation would come under the Parish Committee?—Yes, but I mention this as an instance of the small sum of money that can be obtained by borrowing.

34412. CHAIRMAN.—If the district is scheduled can he get a loan from the Congested Districts Board?—He never can get more of a grant from the Board than £5 no matter what work he undertakes. The Board lends none.

Mr. JAMES TRAVERS examined.

Mr. James Travers.

34413. CHAIRMAN.—You live at Drumkileen, Gorvagh, and are a District Councillor?—Yes.

34414. Are you a farmer?—Yes.

34415. What is the size of your farm?—Twenty-eight statute acres, valuation £12.

34416. How do you work that?—I work that with what we call the heavy loy, hand labour.

34417. How many acres do you till with the heavy loy?—From two to two and a half.

34418. What do you do with the rest?—Grass and hay.

34419. Have you got your own cattle?—No. I keep milking cows. As regards Sir Morgan Crofton's Estate, this property was purchased in 1901 at eighteen years' purchase by clear tenants, and nineteen years by those who were in arrears. There are forty-nine uneconomic holdings on the property consisting of from four to eight Irish acres of poor wet land, all drowned for want of draining the Elsin River and its back drains that are running through this property. There is also a road badly wanted through the Aughaumcarne bog. I want to state with regard to the purchase of this property that the turbary was at 10*s.* a year that they got fixed as a rent and afterwards they have to pay that for seventy-one years, and when they are going to break their cutaway they have to go and buy that also, and there is an addition of 10*s.* on that; so that is two buyings on both the turbary and cutaway on that property.

34420. Sir JOHN COLOMB.—Are you a tenant purchaser yourself?—I am a tenant purchaser.

34421. Is this your own experience?—Yes; what I am watching every day of the year. I bought the turbary for 10*s.* a year.

34422. Most Rev. Dr. O'DONNELL.—Addition on the rent?—Yes.

34423. Sir JOHN COLOMB.—Had you been into court?—Yes.

34424. Were you a first term tenant?—Yes.

34425. In the decree of the court were you allowed turbary?—Yes.

34426. It was part of your holding—it was included in your statutory lease?—Not so; I had to pay 10*s.* outside of that. The 10*s.* was always separate from the rent.

34427. CHAIRMAN.—Then you had not got turbary with your judicial holding?—No.

34428. You had your judicial rent on your holding, and in addition you had to pay 10*s.* a year for turbary?—Yes.

34429. Sir JOHN COLOMB.—Was the turbary on the same property as the property on which you were tenant?—Yes.

34430. CHAIRMAN.—When the estate was sold what happened?—At the time of the sale we had to pay £9 10*s.* purchase for the right of turbary; then if we happen to break it we have to pay at the rate of 10*s.* a year for the cutaway, a rood.

34431. Most Rev. Dr. O'DONNELL.—£9 10*s.* you paid for the turbary?—Yes.

34432. Did you pay in cash, or was it added to the annuity?—It was added to the annuity.

34433. That would be nineteen years' purchase of 10*s.*?—Yes.

34434. Then you have paid nineteen years' purchase of the little plot?—Yes.

34435. How much turbary have you bought?—About a half acre.

34436. For that you paid 10*s.*?—Yes. I paid it to the landlord, and it was added to the purchase.

34437. CHAIRMAN.—Now you say if you break it you have to pay for it?—Yes.

34438. Then you pay 10*s.*?—Yes.

34439. To whom would you pay it?—It has to be purchased like the rest of the farm.

34440. Mr. SUTHERLAND.—You are proprietor of it yourself?—Yes.

34441. They cannot then force you to pay more than you have agreed?—They are doing so.

34442. The Land Commission?—Yes. It is added if you want to get cutaway to till.

34443. Sir JOHN COLOMB.—Do you mean this, that if you break up and cultivate the turbary for which you paid rent you have to go elsewhere to get turf?—No. There are lots of turbary on the property. I have to go to some other bog on the property.

34444. You bought with your property a turf bog?—Yes.

34445. You were cutting turf there then?—Yes.

34446. Have you tilled that land since?—I have not tilled it myself, but I have seen my neighbour who has done so.

34447. He had to go look for another piece of bog instead of what he was tilling?—He has it. He cut out this end that he was in possession of, and what he has cut out he has tilled, and he had to sign a fresh agreement for this piece.

34448. Most Rev. Dr. O'DONNELL.—Is his piece of turbary as big as yours, or about the same size?—About the same size.

34449. What I understand Sir John wanted to get from you is this. Is he going to get turf on that spot, or is there provision to give him turf elsewhere?—That is a question I am not able to answer.

34450. CHAIRMAN.—Don't you think the 10*s.* he has to pay now is because he has to go to some other bog?—No. I have known some tenants who went to another bog and they paid no 10*s.*

34451. Tenants on the same property?—Yes.

34452-3. Sir JOHN COLOMB.—Did this man tell you this happened?—Yes.

Mr. Stewart.—It is the case which I brought under your notice. We sold the right of turbary, and we have to find a tenant turbary occasionally when he has cut away the portion where he was getting his turf. We did not sell the turf bank, but the right

of turbary, and when it is cut out in one place we must provide for him somewhere else.

34454. CHAIRMAN.—The right of turbary was over a certain area, and as long as that lasted you gave him turbary there?

Mr. Stewart.—Yes.

34455. CHAIRMAN.—When he cut that out would the holding relapse to the landlord?

Mr. Stewart.—Yes; and his friend, I am sure, came to me as happened in two or three cases, and asked me would I give him the bog garden, this piece of cutaway bog, to cultivate, and then I gave it to him probably for 10*s.*

34456. Mr. SUTHERLAND.—Did this happen subsequently to the sale?—(*Witness*).—Since the sale. There is abundance of turbary, if fairly divided. Some of the tenants got a small quantity and others got a large quantity.

34457. CHAIRMAN.—As I understand, the tenants did not buy the bog. They only bought the right of cutting turf?—I understood we bought the turf banks. With regard to the drainage, it is a thing that is very much needed on part of the property. A great many of the small farmers suffer great loss by the want of drainage of the Eslin River. It is a large river. There is portion of the river cleared up. We have to pay so much for it to the Drainage Board. I have known some parties paying 18*s.* a year towards the drainage and it not the principal river that was drained, but only a branch.

34458. Most Rev. Dr. O'DONNELL.—Was the drainage a success?—I could not say. It did not come within our reach. It was on another property.

34459. You had to pay for it?—Very much. There was a property that was bought out down near Carrick-on-Shannon. There was £100 expended on a branch of the Eslin River and the tenants on that part of Sir Morgan Crofton's property had to pay their part of the money as some of their land lay along the river. Now, I will refer to Lord Massey's estate. Negotiations have been completed on this property, but the Land Commission has not advanced the money to the vendor yet. The tenants have given twenty-one and a half to twenty-four and a half years' purchase for hilly and mountain land, while the low lands have been flooded every harvest for want of keeping a branch of the Eslin properly drained. The bogs also are very much in need of draining, and of roads through them. There are thirty-five uneconomic holdings on this property consisting of from four to nine acres. If it were not for their earnings in the English harvest fields and remittances of money sent from their relatives and friends in America, the tenants would have to sell out their small farms and go to foreign countries. The tenants on this property have given from three and a half to five and a half years' purchase more for worse land than tenants on neighbouring estates have given. Peyton's property—This estate has not yet been purchased. There are five uneconomic holdings on it in my district consisting of from five to eight Irish acres. It requires draining very much. Next is Mr. Ruthven's property. This property is situated in the Glebe of Mohill; it is not purchased yet. There are forty-three uneconomic holdings on this property of wet marshy land which is impossible to make a living on. Only for Scotch and English earning and remittances from their people in America they would never be able to meet their high rents. Drainage is much required in these parts, and a new road is much needed. There are twenty of those families in a destitute way for the want of this road. It is impossible for them to get the produce of their farms to the market for sale. King's property.—This property is not purchased yet. It needs draining very much, as the boggy land gets greatly flooded by the Blackwater and Eslin Rivers. This Blackwater River is not on the sheets for drainage, and it is a branch of the Eslin. There are only three uneconomic holdings on this property in my district. Colonel Clement's property.—This property is not sold yet. There are seven uneconomic holdings on it of poor, bad land. Parts of it are greatly flooded by a branch of the Eslin River. Dr. Crofton's property.—This property is not sold yet. It consists of only one townland. There are three uneconomic holdings on it composed of from five to eight Irish acres of the worst sort of land. The low lands are continually flooded by a branch of the Eslin River. Compulsory purchase must be provided before the problem of congestion in Connaught is solved. I don't know of any industries that would benefit the people living in small farms except a woollen factory, or lacemaking and manual instruction.

34460. Sir JOHN COLOMB.—When you say compulsory purchase, do you mean compulsory purchase for the landlord and compulsory rent on the tenant?—I would not say compulsory rent on the tenant.

34461. Who is to fix the rent on the tenant when the Estates Commissioners buy the property compulsorily?—I would think that a Commission should be appointed to do so, an honest Commission.

34462. Then suppose that a tenant thinks the Commission fixes too much, is he to be forced to pay what he thinks too much?—He would be a great fool to pay too much. It would be better to emigrate any time.

34463. I want to get at what you mean by compulsory purchase—you mean some authority taking the land from the owner?—Yes, at a fair rent.

34464. Who is to say what a just rent is—is it the body who is going to buy—is it the Estates Commissioners who are to say that it is a fair rent—is that what you mean?—Yes.

34465. If the tenant thinks what the Estates Commissioners say he is to pay is too much, are they to be able to compel him to pay what he thinks too much?—Any Estates Commissioners who would come and travel those lands would not leave too much rent on them, they are so bad.

34466. Is this your meaning, that the Estates Commissioners are to fix the price on the owner, and the tenant is to fix his own rent or annuity?—The Estates Commissioners to fix what they would think a fair purchase price for both landlord and tenant, and I am sure that no Commissioner of any conscience will fix an exorbitant rent on the lands of Leitrim.

34467. Not exorbitant, but the tenant might think it too high; what should be done then?—I could not say. It would take a more intelligent man than I to answer that question.

34468. Mr. SUTHERLAND.—When a fair rent is fixed at present is the tenant asked whether he considers it a fair rent or not?—I could not say.

34469. Did you ever pay a judicial rent?—Yes.

34470. Were you ever asked whether it was a fair rent or not?—I was not; but whether I was or was not, I had to abide by it.

Mr. FARRELL REYNOLDS examined.

34471. CHAIRMAN.—You come from Corrigeen, Mohill, and are deputed by the Cavan (Mohill) branch of the United Irish League to give evidence before us?—Yes. This branch represents the two electoral divisions of Bunnybeg and Drumdoo. I have made out the number of holdings in each of these divisions not exceeding £4 valuation, between £4 and £8, between £8 and £12, and over £12. The area of Bunnybeg is 3,235 acres and the valuation £1,460. It contains fifty-eight holdings not exceeding £4, 61 between £4 and £8, 12 between £8 and £12, and 30 over £12. Drumdoo electoral division contains 3,841 acres with a valuation of £1,869. It contains 60 of the first, 79 of the second, 55 of the third, and 33 of the fourth class of holdings. There are no farms in the district let as grazing ranches or farms that could be subdivided for the purpose of increasing the small holdings; the only way in which relief can reach the people would be if the divisions were scheduled as a congested area, relief-in-aid might find its way into the district, whereby small farmers would get an opportunity of making improvements on their dwelling-houses, offices, and streets, and in the removal of manure heaps away from the houses. The cleaning and deepening of the rivers of the district under careful supervision is required, inasmuch as this district suffers from periodical flooding of the tributaries of the Shannon owing to their present neglected state. These tributaries at present cannot empty themselves into the Shannon. To my mind the weir walls of the Shannon at Rooskey and other places would want to be lowered a foot. That would drain thousands of acres.

Apr. 26, 1907.

Mr. Farrell Reynolds.

34472. Most Rev. Dr. O'Donnell.—One would have to begin with the Shannon?—Yes, begin with the Shannon to drain the district perfectly. The Eslin River empties itself into the Shannon. There was a weir wall on the Eslin River at Killimaun there some time ago to keep back the water and 300 or 400 acres of land were subject to flooding and converted into a lake for the greater part of the year. The people got desperate and levelled the weir wall, but for a length of time the wall was there causing these extensive floods. The County Leitrim is intersected with rivers and the flooding is very injurious. The drainage carried out heretofore was not under careful supervision. Portion of the banks of the rivers slipped away and remained stagnant in the bottom of the rivers. The rivers became shallow and the flooding increased to the detriment of the district. I am very sure if the rivers were cleaned the people would clean the drains through their farms. When I cleaned a drain where I live myself the lough flooded it, and it is worse than before. The repairing of by-roads and passes cannot be touched on by the District Council owing to the continuous high rate in the Mohill Rural District. If these divisions were scheduled as congested the probability is that subsidiary relief would find its way to the congested parts and be administered by the Parish Committees, in this way immense good would result, as it is not altogether from the amount of money received, but from the inducement held out by encouragement in the way of assisting in the establishment of cleanliness and health. Certainly for the amount of money they have got they have done well. Much still needs to be done, and the people are prepared to give every assistance, but if they get little help at all it would induce them to go at it more greedily. On the Simpson estate portion was sold before the passing of the Land Act of 1903 at fifteen years' purchase and some at seventeen years', while another portion was sold under the Act of 1903 at twenty-three years' purchase. I understand the Commissioners came out to visit the tenants who did not agree to the first purchase and told them that by getting lower interest they would only have the same instalment to pay as the other tenants who purchased at seventeen years' purchase. I would not think that fair, that the landlord would gain four years' rent by it.

34473. Sir John Colomb.—What are the rates; what is the name of the electoral division?—I represent the Drumdoo electoral division on the District Council, but as a general rule the rates in the whole rural district on houses and other hereditaments this year are six shillings in the pound; there is a shilling for the railway and a shilling for the asylum.

34474. The poor rate in that division in 1881 was 1*s.* 11*d.*, and is now only 1*s.* 1*d.*?—Yes. It is the district rates that are going up.

34475. Your district rate has gone up since the County Councils were established?—Yes. Seven years ago it was 4½*d.* and now it is 1*s.* 3*d.* Other estates sold under the Ashbourne Acts, such as Lord Granard's, the Crofton estate, &c., &c., were sold at from 16 to 18 years' purchase before the Act of 1903, although the land was of a better quality than those for which landlords are now demanding from 24½ to 27 years' purchase. Tenants loaded with arrears of rent will naturally accept any reduction in settlement of their position sooner than be pressed for payment and in order to evade eviction. Such tenants urge their neighbours to agree to buy at up to 26 years' purchase in the event of the current year's rent being abated, saying "God knows who will pay the last instalment," thus verifying the old adage—"A drowning man grasps at a straw." On the estate of Major Lawder the tenants bought direct from the landlord, with the result that a great portion of the purchasers have subsequently instructed a solicitor to petition the Estates Commissioners to exonerate them from the liability thus incurred, on the grounds that they first refused to sign on the offer given, but as they indulged too freely in intoxicating drink supplied by the landlord's herd for the purposes, they were then induced to go back and sign an agreement they did not understand or were not in a condition to understand. Mr. Lawder holds about seventy Irish acres of the best land, which before the famine of 1848 was a little village. If that portion could be acquired by some power and distributed among the tenants living on the uneconomic holdings around it it would settle the grievances which prevail there. On the Madden, Brady, and Moore estates, the tenants who bought direct from the landlord are daily complaining of the terms, 24½ years' purchase. Were it not for the money coming from America and elsewhere in the last 12 or 15 years the rents could not be paid. It is well known that tenant farmers borrow the money to send their oldest boy or girl to America in order that they would bring out the other members of the family, as well as send assistance home to pay the rent and keep their parents living, and shopkeepers give credit to small farmers pending the receipt of American remittances. Over 50 per cent. of the farmers around here depend more on their exiled children's exertions than on the produce of their farms. What is said to be a very rich iron mine lies in the parish of Annaduff (convenient to Mohill), and through which the Midland Great Western Railway runs. If opened it would give employment to many hundred persons. If proper drainage was carried out a great many swamps could be made into land fit for tillage.

34476. Chairman.—How many tenants indulged in this luncheon?—Nearly every tenant who went there to sign agreements, except those who were teetotallers.

34477. How many?—I could not tell you, not being on the estate.

34478. Were there 100 of them?—In all there would be.

34479. And 100 got really into the condition that they did not know what they were signing?—Another inducement sprung was in reference to a patch of bog lying on a few townlands, and some of the tenants were afraid that this bog might be got by tenants further away, and the desire to get this patch of bog was one of the reasons they signed.

34480. Did they persuade their neighbours to come and sign too?—Yes.

34481. So it was not entirely the result of the whiskey?—The whiskey had a good deal to say to it, because it softened the brain of men who thought the terms too high.

34482. It made them more liable to be persuaded by their friends?—Yes.

34483. Sir John Colomb.—This was on the day the agreements were signed?—The tenants of the two townlands were invited in one day and were told he was not inclined to sell those, that he wanted to keep that bog reserved for himself.

34484. And the tenants went there to sign agreements on terms agreed to before?—They never heard the terms until they were to the landlord's residence.

34485. Was there no discussion about buying before the tenants were asked to sign at a rate they never mentioned before?—Yes. The sale was taken out of the hands of the agent. Captain Darley, who had the estate before, had nothing to do with the sale. It was given to a man named French.

34486. You say that for the last 12 or 15 years the rent has been paid by money coming from America?—Ninety per cent. of the rents.

34487. Twenty or thirty years ago rents were very much higher than now?—I believe they were.

34488. If money was not coming from America in those days to the same extent how did they pay the rents?—Butter was going then at from a shilling to fifteen pence, and is now from sixpence to eightpence; a cow worth then from £8 to £10 is now not worth more than £4 to the farmer.

34489. You think that prices have fallen?—The prices of farm produce have fallen.

34490. That is your position; the people twenty or thirty years ago paid their rents without the help from America that they get now?—More so.

34491. And the way you account for it is that the prices of farm produce have fallen?—Yes, the store cattle. Out where I live there is a mixed class of farming carried on. There is some agriculture and some dairying.

34492. Most Rev. Dr. O'Donnell.—Do the emigrants who go to America return in large numbers?—Yes, after some time. It is they who send up the price of land in this country. I don't know any practical farmer to buy land with the money he made on land. All the land purchased round me for the last ten or twelve years that I can remember was purchased by shopkeepers' money or American money. No farmer ever buys land in this country except he has got the price from America from some son who intends to come home or who was home.

34493. Chairman.—Do you say nobody bought a farm except with American money?—No farmer bought it with capital realised off his farm.

34494. You don't mean the ordinary tenant purchaser?—I am speaking of a farm put up for sale by auction—that is not the fee-simple interest.

34495. Sir JOHN COLOMB.—Why should a man buy this very bad thing—if a farm is such a very bad thing that it can only be paid for by American money, how is it that any man wants to buy a farm at all?—Because the tendency of the Irishman is he becomes home-sick, and he wants to have a place when he comes home.

34496. All the farms are being bought by returned Americans?—The most of them.

34497. With capital?—With American earnings. There is a disused gaol in Carrick-on-Shannon. It would be a great benefit to the people for miles around if some kind of industry such as a bacon-curing industry or a bacon factory were started there. Nothing to my mind would benefit the locality for a radius of nine or ten miles more than a bacon factory which would give the people the first price of their pigs. It is a good pig raising district.

34498. Mr. SUTHERLAND.—Has the gaol industry failed?—Yes; they did not get enough of lodgers. Sligo is fit to contain all the lodgers from the County Leitrim.

34499. You would not propose to start a bacon-curing industry unless it would pay very well?—I believe it would pay.

34500. Why don't people put their money into a bacon-curing industry if it would pay?—They are not enterprising enough in this country, and it may be for lack of capital.

34501. Most Rev. Dr. O'DONNELL.—I suppose it would take a considerable amount of capital?—I don't know what it would take. *Apr. 26, 1907.* Mr. Farrell Reynolds.

34502. Sir JOHN COLOMB.—Why don't these Americans who come home put their money into things like that?—They may not be enterprising enough, or they may not have a great lot. It would take a company to do it. A man makes £300 or £400 in America. He may give that for a small patch of land to live on. He is absolutely fit for nothing except to live until he dies. I never saw one of them fit for a spit in agriculture. They have exhausted their energies in America earning this money. I never saw any of them that did anything except eat, and live and die. I have known several men who went to America and came home, and when their children get up, as soon as they get from boyhood at all, they send them away to America to do as they did themselves.

34503. Most Rev. Dr. O'DONNELL.—Did it occur to anyone in public authority to send an expert to report on the possibility of that bacon-curing establishment?—No. As far as that is concerned, I find fault with the lethargic spirit of the County Council.

34504. Mr. SUTHERLAND.—You have never represented to the Congested Districts Board that the prison at Carrick was at their disposal?—The district is not scheduled. I strongly recommend that the entire union of Mohill should be scheduled.

34505. Most Rev. Dr. O'DONNELL.—You think that in all the electoral divisions there are poor areas?—Yes.

Mr. WILLIAM KELLEHER examined.

34506. CHAIRMAN.—You are a farmer, and reside at Garvagh, Drumlowan, Gorvagh, Mohill?—Yes. Mr. William Kelleher.

34507. You have sent in a precis in which you refer to the Ruthven Estate, of which we have already heard. Is there anything additional that you wish to tell us about it?—No more than was said by a former witness.

34508. What about Mr. King's property?—It is in a bad state for drainage.

34509. And Colonel Clement's property?—There is also a portion of that which needs drainage very much.

34510. Is the damage there caused by the same river?—Yes.

34511. You say that some of Dr. Crofton's property also requires draining very much?—Yes.

34512. You think compulsory purchase is needed to solve the problem of congestion in Connaught, and you don't know of any industries that would benefit the people living on small farms except a woollen factory or lacemaking and manual instruction.

34513. I suppose it would satisfy you if the Congested Districts Board sent down an expert to see what could be done?—It would.

Rev. J. G. DIGGES examined.

34514. CHAIRMAN.—You are rector here?—No, I am private chaplain to Mr. Henry Clements. I have resided in this district for the past twenty-four years. In my opinion, the congested districts suffered through the transfer of agricultural functions from the Congested Districts Board to the Department of Agriculture. In the promotion of industries and the organisation of agriculture, there is a great deal to be done which the Congested Districts Board began, and was eminently fitted to carry on, and which the Department, with the best intentions, cannot do. The Department's methods are of cast-iron. Their policy is controlled by the Council of Agriculture. The Council of Agriculture consists of 104 members, of whom the County Councils appoint sixty-eight, and thirty-four are nominated by the Department. The County Councils, which appoint two-thirds of the members of the Council of Agriculture, are dominated by shopkeepers, chiefly by publicans. The interests of these are frequently in conflict with the interests of the agricultural population. It is this conflict of interests which gave rise to the attempt on the part of the County Councils to terminate the association of the Department with the Irish Agricultural Organisation Society, the shopkeepers on the Councils objecting to any organisation of the farmers on a trade basis, and causing their objections to find expression at the meeting of the Council of Agriculture last November. The County Councils are notoriously influenced by political and class prejudices, and these are not seldom brought to bear upon attempts to foster or to create industries. The Congested Districts Board, on the contrary, are free from County Council control, as from political and class prejudices. They had a free hand to deal with each case on its merits; they got into touch with the people, gained their confidence, and dealt with their needs in a prompt and practical manner. Bee-keeping is one of the most profitable of the minor industries. It demands small capital, no land, is suited to the poor as well as to the well-to-do, and will pay 100 per cent. to 150 per cent. per annum under careful management. There are men in Ireland making over £100 per annum by bee-keeping. Mr. Reynolds, in his evidence just now, told you that he has never known a case in which a farm was purchased in fee-simple with money made by farming. Against that, I am able to point to a case of farms having been purchased with money earned by bee-keeping. John Doyle, Kellystown, Adamstown, County Wexford, a labourer and a very small farmer, has recently purchased two large farms with the profits made off bee-keeping. Rev. J. G. Digges.

34515. Most Rev. Dr. O'DONNELL.—I think the witness was referring to the County Leitrim?—Yes. This case that I am referring to occurred in the County Wexford. The Congested Districts Board went in thoroughly for the promotion of bee-keeping. They founded associations, advanced loans for the purchase of hives, &c., opened a depôt in Dublin for the collection and sale of honey and wax, and employed qualified experts who visited the districts, instructed the people, and dealt with the bee pest (foul brood). These experts were qualified by, and were members of the Irish Bee-keepers' Association, and the Congested Districts Board worked in harmony with the association to the great advantage of the industry, which flourished quite remarkably under the Board's care. I refer chiefly to Donegal, Clare, and also to this county. The Department's attempts to deal with the industry, as successors of the Congested Districts Board, have been little short of disastrous. They have "qualified" and sent out "instructors" to the counties, and these "instructors"

Apr. 26, 1907.

Rev. J. G. Digges.

have, in some cases, been merely laughing stocks among the bee-keepers. The Department have not recognised the existing associations of bee-keepers, notably the Irish Bee-keepers' Association, a society formed upon a democratic basis, that has been in existence for the past twenty-two years. It has been ignored by the Department, and its offers of assistance and advice rejected, with the results stated. Lately the Department have made a rule that, where possible, the instructor in horticulture shall also be the instructor in bee-keeping, with the result that horticulturists, with a smattering of bee-keeping, have been appointed in the counties, bee-keeping taking the back place and being quite neglected. The rule should be withdrawn. The Department should use its influence with the County Councils to have an instructor appointed in each county. These instructors should be qualified by the Examining Board of the Irish Bee-keepers' Association, which is the chief authority in Ireland on bee-keeping subjects. Associations on the model of those started by the Congested Districts Board should be formed throughout the country, loans at 3 per cent. should be made to them for the purchase of bees and hives, &c., such loans to be repaid within three years, and the Department should get into touch with the Irish Bee-keepers' Association with the object of forming their schemes upon proper lines. Agricultural Banks are societies registered under the Friendly Societies Act, 1896. Their object is to assist their members with capital, to educate them in the true uses of credit, and to foster the spirit of mutual help, or co-operation. Members are admitted on payment of an entrance fee of 6*d.* each, membership being confined to persons of good character. The members elect the committee. The committee grant or refuse loans. Loans are made only for reproductive objects. Mutual liability is the principle, every member being equally, jointly, and severally liable with every other member for the debts of the society. This principle promotes extreme caution in the management, with the result that loss in working is practically unheard of. The Department advance £50 or £100 at 3 per cent., deposits are received locally at 4 per cent., and the Joint Stock Banks advance the balance required at 4 per cent. Members are charged 5 per cent.; they fix their own time for repayment (subject to the approval of the committee, generally for six, eight, or twelve months), and they pay their interest only when repaying their loans at the rate of 1*d.* per £1 per month. No profits are divided among the members, they go to form a reserve fund. The books, stationery, and the services of a public accountant are supplied by the Department gratis. We have had four of these banks established in this end of the county, viz., Farnaught, Mohill, Annaghmore, and Johnston's Bridge. Farnaught Bank was founded in 1902. We have never made a bad debt. In 1906 Farnaught membership was 188; loans granted, 131; total loans for the year, £834; average loan, £6 7*s.* 2*d.*; overdue loans, nil. Last month we distributed among our members £90 worth of Ulster-grown seed potatoes at prices from 4*s.* 6*d.* to 5*s.* per cwt., delivered at Mohill free, payment to be made by the members within twelve months. The Department advanced £85 at 3 per cent. for twelve months, and sent an inspector to examine the seed at Mohill. I anticipate that our loans in 1907 will exceed £1,000. These banks do a great deal of good. They enable farmers to hold their stock for better markets, to purchase stock, pigs, &c., and they offer the same advantages to labourers—in short, to everyone of good character who may apply for admission. The borrowers are allowed sufficient time to make their profits before being called upon to pay their loans. The loans are granted on the personal security of the borrower and two others approved by the committee. These banks have largely assisted to overcome the evils of the "gombeen" system. At Farnaught, with a mixed committee, we have had absolute harmony all the time. Banks of this description should be established in every parish, in Connaught at least, and their functions should be extended to the purchase of manures, seeds, feeding stuffs, spraying machines and materials, for sale to the members. The Congested Districts Board could do this, but it is very doubtful that the Department could, for the County Council traders would stir up opposition to it as interfering with their interests. Co-operative dairies are registered under the Friendly Societies Act, 1896, and are governed by committees elected by the members. Membership consists in the holding of one or more £1 shares, the number of shares being sometimes arranged according to the number of cows owned by the particular member. A maximum dividend of 5 per cent. may be paid. When I started the first, or one of the first of such dairies, in 1886, butter was selling in Mohill market at 5*d.* per lb. We are able to pay from 9*d.* to 11*d.* all the year round. The weakness of the system lies in the absence of winter dairying. With the approach of winter, our dairies cease working, for lack of milk, their whole business becomes disorganised, their customers go elsewhere to constant suppliers, Danish and others. For six months of each year the staffs are idle, and during those six months the farmers lose the higher prices obtainable in winter. In each county, one or two suitable societies should be selected, to whom money should be advanced at 3 per cent. for the purpose of promoting winter dairying, the societies to lend to their members for that purpose alone. An instructor should visit the districts, instructing the farmers in economical management, and keeping oversight of the operations. The profits to the farmer would be largely increased, and these "object lessons" in each county would go far to break down the existing prejudice against winter dairying.

34516. Sir JOHN COLOMB.—You mean that to keep the creameries going in winter there must be a change in the system of cultivation to a certain extent, that is to say of crops for feeding cows in winter?—Certainly, and I do think that farmers should be assisted with capital for that purpose in an experimental way.

34417. CHAIRMAN.—What capital would they want?—That would depend entirely on the size of the farm. My idea is that the Society should select some of the best farmers who could be relied on to carry on this operation. A man should be asked how many cows his farm would carry. If he says five, they should advance sufficient money to buy these five.

34518. Most Rev. Dr. O'DONNELL.—These would be pioneers?—Yes. The Department of Agriculture or the Congested Districts Board would send an instructor to instruct these men about the feeding of their cows. In the congested districts co-operative dairying is difficult to promote because of the want of capital to erect and equip dairies. Money should be advanced for the erection of separating stations affiliated with churning central dairies, the cash to be lent at 3 per cent, and to be repayable during a course of years out of profits. I will give an example of what can be done in this way. Two years ago we had a society started at Bornacoola, Johnston's Bridge, as a separating station, affiliated with Mohill. They got to work late in 1905, and did well. In 1906 Mohill paid them over £4,000 for their cream, they paid an average of over fourpence per gallon for the milk supplied by their members, and they made a net profit of over £300. After one and a-half years' work they have paid all expenses of building and machinery equipment, are entirely out of debt, and have a substantial balance to credit.

34519. CHAIRMAN.—They paid fourpence a gallon?—Yes.

34520. That is a rather low price?—No. It is considered very high in this part of the country.

34521. What do you pay at the dairy here?—We were not able to pay quite as much as that. I thought we did very well paying 3·70 and 3·50*d.* per gallon, but fourpence per gallon in Leitrim is an excellent payment.

34522. Most Rev. Dr. O'DONNELL.—Would that be 10*d.* for the 1 lb. of butter?—It would work out nearer to 11*d.*; and, as stated before, when the scheme was first started in this country farmers were selling butter to my certain knowledge for 5*d.* a pound in the market, and they are now getting this high price without having to make the butter or market it.

34523. The difficulty before was the want of proper housing accommodation for the butter?—It was not butter properly so-called. It was more cart grease. The advancing of money for the two purposes named might be done by the Congested Districts Board, and probably would be, but I do not think that the Council of Agriculture would permit the Department to embark in any such work as it would be represented as an approach to trading by the Government. The pig raising which has been already referred to in connection with the gaol at Carrick-on-Shannon is an important industry in this county, but the profits go not to the farmer but to the middleman and retailer.

He sells his bacon at threepence a pound and goes at once to his grocer and buys American bacon at ninepence a pound. I look upon a healthy pig as a kind of saving bank from which, after certain risk and considerable work, the farmer gets back his own with a very small interest. What is required is a system of bacon-curing co-operative factories which would undertake marketing also, and would return the profits to the farmers less expenses and a maximum dividend upon capital of 5 per cent. These factories should be provided for by loans on the same principle as the separating stations already referred to. Here again the Congested Districts Board could act, but the Department of Agriculture and Technical Instruction would be precluded because of their constitution. I come now, my lord, to what I consider the most important part of my evidence. In the Arigna district, just outside the borders of this county, there is vast mineral wealth almost untouched. There is a practically inexhaustible supply of coal, rich iron ore, fire-clay, and flags. The coal is bituminous coal. It was suggested to Mr. Stewart when he was giving evidence that it was anthracite coal. This is incorrect. The coal is bituminous—an excellent steam coal, and is used exclusively in the locomotives of the Cavan and Leitrim Railway, and, if there were proper railway facilities, it could be placed upon the home markets in easy competition with Scotch and Welsh coal. The iron ore has been shown to be far superior to Staffordshire, Welsh, and Glasgow ordinary. When the Cavan and Leitrim Railway was projected in 1883, it was intended that the Arigna branch should be extended to the mines, but, through an unfortunate informality, the County Roscommon promoters had their Order in Council thrown out, and the line was stopped in the middle of a bog, 2½ or 3 miles from the mines. As a result, the coal has to be carted to the railway, adding a cost of 2*s.* 6*d.* per ton to the price; the supply of carts is limited, the road is frequently next to impassable; coal lies at the pit mouth, and operations have frequently to be suspended in consequence.

34524. CHAIRMAN.—There is a company which runs this mine?—Yes.

34524A. Why don't they run a light line on to the mine?—I was about to explain that it ought not to be necessary to do so. The Arigna Mining Company, a small company, with £5,000 capital, in spite of the difficulties, gives employment to about 150 men and boys, the men earning 31*s.* and the boys 12*s.* per week, when working full time, the wages amounting to about £5,000 per annum. The district is congested; the ratepayers in the County Leitrim guaranteeing areas are heavily taxed for the maintenance of the railway. It is of immense importance that the mining industry should be developed, that new companies should be formed for the purpose, that additional wage-earning facilities should be provided for the people, and that the railway tax should be reduced by throwing large mineral traffic on to the line. In 1905 Mr. Walter Long, then Chief Secretary, visited the district, and the Government made a free grant of £24,000 for the extension of the railway to the mines, and from Dromod to the Shannon at Rooskey. This grant was amply sufficient for the purpose, and it was absolutely free—subject to no interest charge whatever. It was largely in response to the demands of the Leitrim County Council that the grant was made. Nevertheless, when the Bill came before that Council for approval the Council threw it out and killed the scheme. The excuse put forward for this action on the part of the Council was that "they had no guarantee to protect the ratepayers." The ratepayers, however, could have had no liability whatever for the cost of the extensions, the Government having made their grant a free one. The whole story of this lamentable affair, and the true explanation of the Council's attitude are set forth in my pamphlet "Fighting Industries and Financing Emigration in Ireland." The neglect of the mineral resources at Arigna is a national crime. The possibilities there are of far more immediate importance than any lying at Creevelea, for example, because of the proximity of the railway. The cost of bringing the railway in touch with the mines would be only £12,000. The Congested Districts Board and the Department did absolutely nothing to facilitate the project or to remove the alleged difficulties. They simply ignored the whole thing with masterly indifference. The Congested Districts Board should at once investigate the case, and having satisfied themselves of its importance they should take over the grant of £24,000, construct the extensions, and guarantee the ratepayers against any loss upon the working. It will be seen from my book, already referred to, that the danger of any loss upon working the 2½ miles extension to Arigna is an exceedingly unlikely one, and that the completion of the scheme would be of incalculable benefit to the district, to the ratepayers involved, and to the country at large. It would develop one of the few industries naturally belonging to the country, would go a long way towards retarding emigration from the districts concerned, would provide profitable employment for the people, and would make a substantial reduction in the liabilities of the ratepayers who have suffered much for the past twenty years through pressure of the railway tax. And these advantages would be permanent, which, I take it, in the matter of projected industries, is a consideration that will recommend itself to this Commission as of no little importance.

Apr. 26, 1907. Rev. J. G. Digges.

34525. If the coal is of such good quality as to be able to compete with Welsh coal, and the iron ore is so good that it can compete with Staffordshire ore I cannot for the life of me see why it should not be very good business for the company to make the extension themselves. Every company makes its own extensions in England. If they have this mineral wealth to work why should not they make the extension themselves?—The Government have gone into the thing very thoroughly. The railway here would be largely a gainer by the traffic, which means that the Treasury liability under the present guarantee would be relieved of the difference between 3 and 5 per cent. on £202,000.

34526. If the railway company thought it would pay would it not be easy for it to make the extension?—This company is not a private company like the Midland or the Great Northern. I am on the railway board myself, and I know. We have a board constituted of representatives of the shareholders and representatives of the County Council. We have to be pretty cautious as a board in that position.

34527. But if the traffic that the extension would bring about would be really so large that it would increase your revenue?—It would increase the revenue.

34528. Then your special rate might be justified?—It might be justified, but there are more than the Arigna Company and the railway company to be benefited. There is a large population in the congested districts, and I don't see why the Congested Districts Board should have ignored this place all these years.

34529. I quite recognise that if it is possible to get money out of the Government it is better to do so than to spend money themselves, but surely rather than wait for years and years to bring about that result it would be better to make the extension themselves if the coal and iron ore are really so valuable?—We are able to get from that coal 20 per cent. more running for our locomotives than we are able to get from any Welsh or Scotch coal we could buy. The difficulty about making the extension is that the company working the coal is a small company, with a capital of only £5,000, which is all exhausted.

34530. Has it ever occurred to the directors of the company that they might get the railway company to make an extension if they guaranteed interest on the money—that is done in England?—That has been suggested, but my point is that from the fact that the Government thought it worth while to make a free grant of £24,000, they must have thought there was something to be gained by the Treasury. At present they are responsible for 2 per cent. of the 5 per cent. on the £202,000; and the working of the railway has only been for a few years met by its earnings.

34531. Mr. SUTHERLAND.—The Treasury would say: "Why should we, who have many other calls on us, advance the capital for them?"—The Treasury, we say, got an advantage in giving the free grant of £24,000. It actually passed the House in the estimates.

34532. CHAIRMAN.—Was not that in connection with a big scheme to extend the railway altogether?—No; £12,000 absolutely for the extension up the Arigna Valley, a mineral line solely. It could not go further in that direction without climbing the range of hills.

34533. Most Rev. Dr. O'DONNELL.—It had nothing to do with the Newry extension?—It had nothing whatever to do with the Newry extension, which was an old story.

34534. CHAIRMAN.—Was not there also another proposal that the lines should be carried on?—No, because of engineering difficulties. If this line were extended it would be simply into a *cul de sac*.

Apr. 26, 1907.
Rev. J. G. Digges.

34535. Surely there have been proposals to extend the Cavan and Leitrim Railway down to join some other railway?—There have been proposals to carry our line from Arigna to Collooney, but that would involve something like £150,000. Our scheme is to extend it two and a half miles at a cost of £12,000.

34536. Sir JOHN COLOMB.—I don't exactly understand this. You said Mr. Walter Long promised a free grant of £24,000?—He actually gave it. It was put into the estimates and passed.

34537. Did you say you were only to make a line to Arigna?—Yes.

34538. You told us also that the line to Arigna would only cost £12,000?—Yes.

34539. Why was a public grant of £24,000 given to make a line that would only cost £12,000?—I have already said it was given to make two extensions, one to the Arigna mines, and the other to the Shannon at Rooskey, from Dromod.

34540. Then the Arigna line was in combination with another project—£24,000 was to go in extensions of railway. Portion of that extension was to the Arigna mines?—What Lord Dudley asked was was it in connection with a scheme to make a line past these mines?—It was not.

34541. Most Rev. Dr. O'DONNELL.—The other bit was from Dromod to the Shannon?—Yes; the object being to get into touch with the Roscommon cattle fairs.

34542. The second branch of the extension being in connection with the development of the cattle trade?—And also to give us an outlet down the Shannon. The Shannon boats could take coal everywhere. We could have secured very extensive orders from Dublin if we could have sent coal by canal.

34543. Do you think was the sum of £24,000 earmarked for it subsequently?—Yes. It appeared in the estimates.

34544. Was it to come out of the development grant?—Yes.

34545. Would it still be available?—I believe it could be had still. The time elapsed some months ago, but I believe the money could still be had if the Government were satisfied that the extension would be made; but our difficulty is that we are not sure of the County Council. The County Council say that they are afraid of the ratepayers. My suggestion is that a board such as the Congested Districts Board, in which the County Council would have confidence, should step in and say, "We will take responsibility for loss in working."

34546. The two and a half miles?—Yes.

34547. And loss on the working of that should be borne by a public body?—Yes; and every mile of the line as at present worked is making an annual profit of £30, although we are obliged to run on our present system trains which are not at all productive trains. On this two and a half mile extension, which will be entirely a mineral line, no trains would be run without a full complement of traffic, and there would never be any loss in the working of it. To give you an instance of the working, I went to the trouble of taking out the earnings of one particular train at Lawderdale Station, our first train in the morning, which is our limited mail. I find that, taking its earnings at Lawderdale Station every day for the last twelve months, the average amount earned per day is only 2½*d.*; yet we are obliged to stop our train there owing to a clause in our agreement. Considering all these things, and remembering that the average profit on the entire line is £30 a mile; on a mineral line on which the train would be always full, there would be little possibility of loss, and it would be perfectly safe for the Congested Districts Board if they made themselves responsible on this head.

34548. If it be sound public policy for the Government to find £24,000 for the construction of that line, it should be also good policy for the purpose of developing what is held out as a big industry to secure the ratepayers in regard to working expenses on that little bit of extension of two and a half miles?—I entirely agree. That is my point. I don't think it necessary to open the question whether it is desirable, because it has been already decided by the Government to make that extension.

34549. CHAIRMAN.—What is the cost on the rates in connection with this line?—At one time it was 2*s.* 6*d.* in the £. It is now a shilling in the £. Last year it was 11*d.* The shareholders get 5 per cent. guaranteed dividend.

34550. The guaranteed dividend is made up to a certain extent by rates?—The Treasury are responsible for 2 per cent., and the rates for 3. The Treasury thought that by making the extension the traffic would so increase that the proportion of outgoings to earnings would decrease, and their contribution would be lowered.

34551. How much of the 5 per cent. secured is derived from the Treasury and local rates, and how much of it is earned?—Our average profit for the last five years has been £1,400, and 5 per cent. on £200,000 would amount to £10,000 a year.

34552. You only earn about one-eighth of the dividend?—Yes.

34553. Most Rev. Dr. O'DONNELL.—You might be able to explain what seems somewhat strange in the evidence which we have already received, by comparison with what you have just stated. That is about the earnings of the line. We were told that the tax went up from eightpence to a shilling. How could that occur if you were earning £30 a mile?—No; the fact is the tax has been brought down from 2*s.* 6*d.* to 1*s.* Last year it was elevenpence. Then arrangements were made with the County Council by which a reserve fund should be established, so that any larger charges which had to be met should not fall on the particular half-year in which the charge occurred, and there was an extra tax agreed to by the County Council which has brought up the railway tax from elevenpence to a shilling. It is to create a reserve fund to equalise the demand. For example, rolling stock and locomotives twenty years in use naturally depreciate; new boilers have to be put in, new engines purchased, and so on, and the cost of this should not fall on the rates for any one half-year.

34554. Did you make these deductions when counting £30 per mile?—Yes; that is the net profit, £1,400 per year. That all goes in reduction of rates.

34555. How was the rate reduced from 2*s.* 6*d.*? Was it in consequence of the Local Government Act of 1898?—No. It is due to the development of traffic. This railway was made as a toy railway. It was a fad of one gentleman who wanted to have a railway near his house. There was no goods store on it that was not 75 per cent. too small. Since it was made it has developed enormously. No one ever anticipated that it would do such a traffic. The traffic has developed wonderfully.

34556. Who are the shareholders?—They are chiefly religious communities in the country. They hold most of the shares, but it is on the Stock Exchange, and is purchased and sold the same as Guinness's shares would be.

34557. Mr. SUTHERLAND.—Just now you would not have many of the original holders of this debenture stock?—They are ordinary shares, £100 stock.

34558. CHAIRMAN.—What do they stand at?—£6 10*s.* on the £5—that would be £130.

34559. Guaranteed at 5 per cent. on the local rates and by the Treasury?—Yes. They have been at £160.

34560. Mr. SUTHERLAND.—I asked you about the £24,000 that the Treasury gave, and you said that they were going to get a return upon it, but it has transpired since that it is to be a free grant?—It was not ordinary payment, but a grant on the estimates.

34561. In what way did you mean that the Treasury would get a return?—The Treasury was to gain by this because the Treasury is liable for 2 per cent. of the dividend, and we satisfied the Treasury absolutely that this expenditure of £24,000 would bring so much extra traffic to the railway that the deficiency would be considerably reduced, and therefore the Treasury liability for the 2 per cent. would be largely reduced.

34562. CHAIRMAN.—Does the Treasury liability come in before that of the ratepayers?—The ratepayer comes in to a certain point, and then the Treasury comes in. The Treasury pays 2 per cent of the fixed dividend.

34563. Mr. SUTHERLAND.—So the railway is getting 2 per cent. from the Treasury, and 3 per cent. from the ratepayers?—Three per cent. less net profits on the line up to a certain point. Then after that point is reached, the Treasury gets a benefit.

34564. Did the Treasury give any money when the line was being made?—No; the money, £202,000 capital, was raised.

34565. It is simply guaranteed by the Treasury and the ratepayers?—That is it.

34566. With the ratepayers coming first and the Treasury next?—Yes, up to a certain point.

The Commission adjourned.

SEVENTIETH PUBLIC SITTING.

SATURDAY, APRIL 27TH, 1907,

AT 11.0 O'CLOCK A.M.

In the Courthouse, Ballinamore, County Leitrim.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; Most Rev. Dr. O'DONNELL; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. BRYAN M'ENROY examined.

Apr. 27, 1907.

Mr. Bryan M'Enroy.

34567. Sir JOHN COLOMB.—You are Vice-Chairman of the Ballinamore Rural District Council?—Yes.

34568. Would you take up the points which you think it most important for the Commission to know?—I know the conditions of the rural district well, and I know the people to be honest and industrious people no matter what is said by some parties to the Commission.

34569. What would you wish to see done?—I want to see a compulsory purchase scheme, because we all did hope that this land question would have been settled by the Act of 1903, but after three years fruitless bargaining we find it is a total failure.

34570. Why do you call it a total failure; do you mean in this particular district?—Yes.

34571. It has not resulted in much here?—I believe they have consented to give an exorbitant price in one case, but they were ten or twelve years in arrears.

34572. There have been no sales?—No sales, only that one particular sale. The estate on which I live myself in the Drumreilly North electoral division, the Harlech estate, was offered to us about twelve years ago at 20 years' purchase. We considered this demand exorbitant on a congested estate, whereas the non-congested estate lying alongside it was sold for 16 years' purchase with reductions, and on inspection they brought it down to 13 years' purchase in many cases.

34573. What estate was that?—It was the Godley estate. The estate of Murrough O'Brien, lying alongside it, a year or two previous to the Act of 1903 was sold for 18 years' purchase and the congested portion was sold for 15 years' purchase, and we all understood that the bonus was to be used to bridge over these differences between landlord and tenant. Instead of bridging this gulf it has created a chasm. In addition to the bonus the landlord wants two or three years' purchase more. Our agent offered 20 years' purchase twelve years ago. When the Act of 1903 passed he proposed to sell at reductions of five and three shillings in the pound. Subsequently he increased his offer to 4*s.* and 6*s.* in the pound respectively. That is the Harlech estate. On that estate, I am informed, the rent was raised three times within ten years. I know there have been terrible rack rents here, just typical of all the estates of this district.

34574. How long ago is it since the rents were raised?—I think it was in the 'sixties.

34575. Nearly fifty years ago?—Yes.

34576. The tenants have been into the Land Court since and had their rents reduced?—When the Land Act of 1881 passed the landlord sent a valuator and in some cases reduced the rents 40 per cent.

34577. Did the tenants then sign judicial agreements out of Court?—Yes, the greater part of them.

34578. Did the others go into Court?—They have been going in gradually. In the 'sixties there was a cruel agent. Subsequent to that we got—what was rare in Ireland—a good agent, Mr. Percy Jones. A large amount of arrears had accrued. Lord Harlech sent in a valuator, and the people adopted his terms, for if they went into Court they would be followed for the arrears, and as the arrears disappear the people are going into Court. The parties that have been into Court this year got over 20 per cent. reduction—4*s.* 7*d.* in the pound. On other estates they got 9*s.* in the pound. Great improvements have been made on that estate and other estates, and we all know that the man who improves his land does not get an adequate reduction. He does not get a reduction acre for acre equal to that of the man who does not improve, and there have been great improvements in this rural district in general.

34579. CHAIRMAN.—Is there any other point you wish to tell us?—I know there is a large drainage scheme wanted, that is field drainage with closed drains to be reclaimed with lime, but I think it would not be wise for the tenants to go into it to any large extent until dual ownership is done away with. I know that the people are poor and anxious to buy out at a fair price, but they don't wish to buy at these exorbitant prices that are demanded.

34580. You don't think it would be a good thing for the people to drain until they buy their holdings?—I am afraid if they drain them and improve them they would not get credit for their improvements. The rents would go up. I know plenty who have done it. They are partly afraid to go into Court. I know a good many of these people, nearly all under £5 valuation, who are paying their rents, and we have to go on giving them medical relief tickets. It is a great hardship on the doctor. The landlord takes away the rents and the doctor has to attend these people. I have seen here in this very room you are sitting in, agents coming here annually at the end of November and carrying away rolls of notes and bags of gold and silver, and the people go away without a shilling. In the rural district that I represent, on the estate on which I live, there is a school in very bad condition. It is a mud wall school. It was built by the late Rev. Stephen M'Ternan, a member of the Royal Irish Academy. Ten years ago we applied for a grant for the school. It was sanctioned, but from the condition of the people the parish priest was afraid to undertake the building of that school. Ever since that, and in this seventh year of the twentieth century, you can see a mud wall school supported by props.

34581. I don't want to interrupt you in anything you wish to tell us, but this matter of schools is one that we have nothing to do with. It is one for the National Board?—We were going to ask the Congested Districts Board to come to our assistance. With regard to the Parish Committee's scheme, it has worked well in this parish, but those in middling circumstances are the only parties who have been able to take advantage of it.

34582. Most Rev. Dr. O'DONNELL.—You mean that the very poor could not take advantage of it?—I do.

34583. A widow with helpless children could not?—Yes.

34584. CHAIRMAN.—Because they could not contribute the necessary proportion?—Yes. I think it should be increased for the coming year. There were a number of parties that we gave grants to under the scheme here and they were not able to take advantage of it.

April 27, 1907.

Mr. Bryan M'Enroy.

34585. What sort of work are you alluding to?—Repairs of houses, building of offices, making of passes and so on. I may also say that there are a great many places in this district badly off for roads, but with regard to new roads we find that we have reached our limit. There is a certain standard rate that you cannot exceed. I think it is 25 per cent. beyond what was the standard rate for the three years prior to the passing of the Local Government Act. The standard rate in Ballinamore rural district is very low, for the reason that we had a railway guarantee here for the three years previous to the passing of the Act. They never took it into consideration as a special railway rate, and I know that previous to that no new roads could be made here and no roads repaired except the main roads because of this excessive railway rate. We put a resolution before the Local Government Board with regard to how we are handicapped in that way, and unfairly treated.

34586. Am I right in thinking that this is what happened, that the railway rate was included in your standard rate?—We had to pay it at the same time.

34587. When they calculated your standard rate the amount of the railway rate was included in it?—No, it was not taken into consideration at all. It was a great hardship to us. We had to pay it, and we got no credit for it in the calculation.

34588. Therefore, you are prevented from spending that amount of money on local improvements?—That is so.

34589. A neighbouring District Council that had not got to pay the railway rate was able to spend that amount more money upon its local needs?—Exactly so.

Mr. James M'Cartan examined.

Mr. James M'Cartan.

34590. CHAIRMAN.—You are a District Councillor also?—Yes.

34591. Will you bring before us any points you wish?—I represent the District Council of Ballinamore. The cause of congestion in the congested districts of Ballinamore is the exorbitant rents upon the land. The tenants were forced to go on bogs and mountains, and wherever a patch of good land is to be had it is either in the hands of a grazier or in the landlord's hands, or somebody connected with him. The lands are ill-drained, ill-reclaimed and ill-accommodated by passes which leave the tenants in continual trouble and litigation. I say the remedy is compulsory purchase upon reasonable terms, terms that would give the tenants a chance to live upon the land, to make it worth something to them, that they would have an interest in it and work it. One of my reasons for believing so much in compulsory purchase is an estate in the rural district of Ballinamore called the Godley property which was sold after Lord Ashbourne's Act became law. The average price was fourteen to sixteen years' purchase. Twenty-five years ago it was a wilderness. To-day it is like a pleasure ground. The farmers, when they became owners of their own holdings, planted belts of shelter on their land, drained it, and reclaimed it, and built houses and improved them, regulated passes and mearings, and everything. Other tenants under landlord rule if they reclaim the land, probably when the land comes into court, the landlord comes up and swears the land was always in that state, and takes the benefit to himself. I don't say it is always done by landlords. It is only by extreme ones it is done, but it has been done.

34592. Sir JOHN COLOMB.—You mean before the Land Court?—Yes.

34593. CHAIRMAN.—You also favour compulsory purchase?—Yes, at a reasonable price. Ballinamore is situate in the Bawnboy Union. Portion of the Union that is not scheduled as congested was given a grant of £250 from the Treasury. In the rural district of Ballinamore, where we are equally badly off we got nothing simply because we belong to a congested district. That is a very small consolation to us, because we get very little from them.

34594. Where is this place?—It is in the rural district of Bawnboy No. 1. They got £250 from the Treasury for the relief of distress. They are getting seed to-day at the railway station.

34595. Mr. SUTHERLAND.—Why are you not getting it—is it because you are in a congested district?—Yes. That is the answer we got to a resolution proposed at a meeting of Guardians: that the Congested Districts Board would see to our grievance and that the Treasury could not interfere. Another grievance we have in the congested district is we are paying 1*s.* in the pound on a guarantee for the Cavan and Leitrim Light Railway. At the time the promoters of this line were taking it into their heads to build it they gave the farmers a verbal undertaking that the tax would never reach beyond threepence in the pound, and they got some signatures, and others they made free with to take themselves, but the thing worked on unfortunately, and now it is a shilling in the pound.

34596. It has been 2*s.* 6*d.*?—Since I became a ratepayer the highest I paid is a shilling. It is a shilling at present.

34597. Most Rev. Dr. O'DONNELL.—How long are you a ratepayer?—About fifteen years. The promoters said it would be only threepence in the pound. That was said to us at every meeting.

34598. Mr. SUTHERLAND.—How much is your valuation?—In the rural district of Ballinamore it is only £4 5*s.*

34599. You pay 4*s.* 3*d.*?—Yes.

35600. Is the railway a great benefit to the locality?—It is some benefit to the country, but there is one thing that is not all that might be desired. It is an evil-designed thing from beginning to end. It does not connect with the coal mines, where we could get our coal cheap, and then if the coal is carried to other places it has to be trans-shipped both at Dromod and Belturbet.

34601. The railway being a narrow gauge?—Yes.

34602. It would be convenient for passengers?—Yes. Another complaint we have against the railway is although we pay a guarantee the train fare is very high; higher than other railways.

34603. And you scarcely think it is an advantage to the extent of the four shillings you pay?—I don't believe it is.

34604. Most Rev. Dr. O'DONNELL.—Someone will be giving evidence, I suppose, about this railway before the Railway Commission?—There are some farms, non-residential holdings, that I would suggest to the Board they should buy them up and sub-divide among the tenants. It would be a great advantage to us in the congested districts. There are some electoral divisions in the rural district of Ballinamore that I suggest should be scheduled.

Rev. Denis Gray examined.

Rev. Denis Gray.

34605. CHAIRMAN.—I think you have been appointed by the Bishop to give evidence?—I have been appointed by the Bishop to give evidence and by the Fenagh Branch of the United Irish League and by the Ratepayers' Protection Association in the guaranteeing area in South Leitrim. My parish—the parish of Fenagh—seems to me fairly typical of the other congested districts in Leitrim. The land is bad, the rent high, and the people deeply in debt to the shopkeepers.

34606. When you say the rent is high do you mean that the Land Commission have not done their duty in fixing the rents properly?—I mean that after two judicial fixtures they have not in most cases brought it down to the old rent that it was in the sixties. It is considerably higher than it was fifty years ago, forty years ago, or even thirty years ago. I know one case where a district was occupied by five men. In living memory the rent was but £5. It was raised to £33. They have gone into Court once, and the rent now is £24. If it is improved it was the sweat and toil of the tenants made it what it is.

34607. It sounds an extraordinary thing that a holding which was rented at £5 should when you have

made allowances for the tenant's improvements be rented at £24?—Yes, after two reductions. It was considered a mountain tract then. Then they improved and cultivated it, and the rent was raised.

34608. Most Rev. Dr. O'Donnell.—How many acres were reclaimed?—There are five tenants living on it now and they have about thirteen acres on the average.

34609. Reclaimed?—They have it all reclaimed in a way. When the rent was £5 it was one holding, but there was sub-division on it privately.

34610. Since then the sub-division has been recognised?—Yes.

34611. And the change that has brought about the improved value in your opinion is due to the exertions of the tenants?—Yes, entirely.

34612. Sir John Colomb.—What is the valuation of the lands you are speaking of?—I have not got the valuation.

34613. Could you send in to the Secretary to the Commission the name of the particular landlord and the valuations?—I am sure I can.

34614. The reason I ask you is this: you are aware that the valuation was founded on inspection more than fifty years ago, and therefore it would be some help to the Commission to understand the statement you have given us, because it would be interesting to know what was the valuation which was made fifty years ago, and I should be glad if you let the Secretary have these particulars for the information of the Commission?—Yes; I shall.*

34615. Most Rev. Dr. O'Donnell.—Will you further, when meeting the very reasonable requirements of Sir John, supply the rent and valuations for some of the other holdings where the rent has greatly increased?—I can now.

34616. It will not be necessary now if you have not got them by you?—The parish of Fenagh comprises large portions of the electoral divisions of Rowan, Castlefore and Fenagh. Rowan and Castlefore are scheduled as congested. Fenagh division is not scheduled although its number of uneconomic holdings is larger in comparison with the entire area than in the scheduled divisions. It should be scheduled as congested, and indeed all Leitrim stands in need of being treated as a congested area. The average valuation of the county is the lowest in Ireland and its poverty is admitted. Leitrim is urgently in need of very paternal care at the hands of the Congested Districts Board if it is not to be allowed to become a complete wilderness. It is suffering acutely from the wasting disease, the running sore of emigration, for which no cure has as yet been discovered. It is now the poorest county in Connaught. It has lost and is still rapidly losing its principal wealth—the best of its people, at the alarming rate of nearly 1,000 a year. For the last half-century it has been drained of considerably more than half its population, and those who are going are the flower of the flock. The peasant parents of this county are rearing their fine families for what I may call the slave markets of America. But they have no other reliable asset, no other means wherewith to pay the landlord, the banker and the shopkeeper, except the earnings of the son or daughter in America. We have no fisheries, in fact no industries of any kind except a poor, uneconomic, sickly form of agriculture which is becoming more and more unprofitable every day. The climate is growing rapidly no better for successful crop raising. The land for want of manure and cultivation is deteriorating. We have no institutions of any kind except workhouses, which are anything but an unmixed blessing since they yield a minimum of return for a maximum of outlay. And as if all this was not enough we have the Cavan and Leitrim Light Railway which places a galling burden on the already over-taxed ratepayers of the guaranteeing area. How the poor people are fleeced by this precious railway fraud! They were hoodwinked into giving the guarantee by being told that it would be something infinitesimally small, but which turned out to be some years nearly 2*s.* in the pound, and worst of all, like the shirt of Nessus, this intolerable burden they cannot shake themselves free of by any means. They were told they would get cheap coal from the Arigna mines and that they would have a majority on the directorate of the concern in lieu of this guarantee. Faith was broken with them in both. There is a preferential tariff now in favour of outsiders who get the coal at 11*s.* a ton, whereas the guarantors are paying 15*s.* 6*d.* a ton. And instead of a working majority on the directorate the ratepayers' directors are in a hopeless and helpless minority. For the last eighteen years these poor guarantors have, out of their poverty, paid to this precious railway the enormous sum of £77,000. There is a kind of penal law of poverty operating against primary education amongst us. There are about 9,000 children on the rolls of the primary schools of the county. The average attendance at school in Leitrim is 59·6. In other words, out of every hundred children in Leitrim forty-one are not educated. Now why is this? It is not because the people do not prize education, which they love as the apple of their eye. The children don't attend school for the simple reason—they can't. The infants may and do attend except in the winter months when want of warm clothing makes it impossible for them. But the older children must stop at home to work, at least during the spring, in putting in the crop, during the summer in saving the turf and hay crop, and during the autumn in harvesting. The able-bodied men are away in England or Scotland and so there are none others except the very old and the children to work in the fields. The parents will tell you if you insist on driving the children to school, that if they do not assist in putting in and saving the crop they shall starve in the winter. That the youth love learning let me give you an instance or two. In the winter, after their day's toil, the young men plod their way long distances to the night schools, where they put in a constant attendance. Again, there is a manual instructor of carpentry under the Technical Department holding classes in my parish at present, and the youths who form the classes attend in full numbers every evening after their day's work, although some of them have to walk three miles to the school. We have had very few sales under the Land Act of 1903. In a few cases where the landlords agreed to sell the terms demanded were prohibitive, 24½ years' purchase, or 4*s.* in the pound. I knew of much better land being sold under the Ashbourne Act at 13 years' purchase, with decadal reductions. Second term rents, in my parish, which I take as fairly typical of the rest of Leitrim in this respect, are not an equitable basis of purchase price, because of the improvements effected by the tenants and because of the rack rents imposed and extorted. I would just instance one estate and would say to the Commission *ex uno disce omnes*. This is the O'Beirne Estate at Castlefore, which the landlord offered for sale at 24½ years' purchase, This estate formerly belonged to a Mr. Walsh, who was not considered to have his land let at anything like a low rent. Yet I have a document in my possession which shows the almost incredible rise in the rent after the estate came into the hands of Mr. O'Beirne.

34617. Sir John Colomb.—When did the estate come into the hands of Mr. O'Beirne?—About fifty-three years ago. I give the case of three tenants typical of the rest. First, Mrs. Gilhooly. Rent under Mr. Walsh, £3 2*s.* 6*d.*, under Mr. O'Beirne, £7 15*s.* 3½*d.*, and after two judicial fixtures the rent is now £3 16*s.* Second, Rodger Leddy. Rent under Mr. Walsh, £6 5*s.*, under Mr. O'Beirne, £15 19*s.* 6*d.*, and after two fixtures the present rent is £8. Third, James M'Manus. Rent under Mr. Walsh, £14 5*s.*, under Mr. O'Beirne, £32 7*s.* 9*d.*, and after two fixtures present rent is £15 13*s.* There is no turbary attached to the holdings on this estate, and a large portion of the land has been reclaimed by the tenants from the wild bog.

34618. Could you give me the valuations?—I can get the valuation and send it on to the Secretary. I did not know it was necessary to look it up.†

34619. Mr. Sutherland.—I suppose the gentleman who bought from Mr. Walsh bought in the Incumbered Estates Court?—I think he did. I am of opinion that if the tenants in Leitrim are ever to become the owners of the soil upon fair terms, compulsory purchase is the only means of achieving such a consummation. Pending the enactment of compulsory purchase the zones should be abolished and the County

* *Note by Witness.*—The valuation is £25 10*s.*—D.G.

† *Note by Witness.*—The valuations are as follows:—Mrs. Gilhooly, £3 10*s.*; Rodger Leddy, £8; James M'Manus, £15 5*s.*—D.G.

Apr 27, 1907.

Rev. Denis Gray.

Councils should have the power of veto on sales. The surplus population should be migrated to the untenanted land as a first essential for the relief of congestion. I regard this as the most difficult and delicate duty of the Congested Districts Board. So I would suggest they would take into their counsels the parish priests whose intimate knowledge of and influence with the people would have the effect of making the machinery work more smoothly and efficiently. The Board should enlarge the sphere of duties of parish committees and increase the grants. The scheme is doing splendid work in Leitrim North and South. Leitrim was for a good while treated rather like a step-child by the Board. It is a pity we have not a representative upon the Board. I hope one of the results of this Commission will be to give us such representation. The Board, however, by the parish committees are making up for their seeming neglect of this county in the past. Every one is enamoured of this scheme. Whoever conceived it and drew it up knew the congested districts' ills and their cure thoroughly. It is the very best thing the Board have undertaken and I have no doubt it is the work they have got best value for. It is the very kind of thing congested areas require. By it, not only is the material condition of the people improved, but their mental outlook also. It stimulates self-reliance rather than reliance on external aid. It is not a substitute for voluntary effort, but it engenders and supplements it. It strengthens the economic and social character of the people by associating them in a more or less responsible capacity with the work to be done. These are all necessary and vital characteristics of this excellent scheme. There is no other way in which money can be so productively applied for the development of agriculture. It stimulates the poor people to make the most out of the land they hold. It has a civilising and educational effect upon the people. It gives them ideas and ideals, and once they begin to improve their houses and surroundings they will go on improving. I believe the land in Leitrim, under this scheme with increased grants, could be made yield double as much as it is yielding at present. There is not a holding in which the gross produce could not be more than doubled under the efficient care of parish committees by improved system of agriculture, drainage, reclamation, good manuring, a good variety of crops, and the right kind of stock. In other words, it would be equivalent to doubling their holdings. Given liberal grants, these committees efficiently manned and managed would turn every farm in a parish into a garden. I am entirely opposed to the amalgamation of the Estates Commission with the Congested Districts Board. But they are not both wanted in Connaught. The Estates Commission will find quite enough exercise for its activities in the other provinces, but let Connaught be assigned to the Congested Districts Board, who from sympathy and experience are so capable of dealing with the many difficult and delicate problems peculiar to congested areas. The mineral resources of the localities should be worked. There are extensive coal fields at Arigna and Slieveanierin. In these we have at our door a great means of raising the congested areas of Leitrim to a level of comparative wealth. If it is true, as I think all admit, that no country ever achieved a high standard of wealth by agriculture alone, it is easy to see that something else besides agricultural industry is required to supplement the profits from the barren land of Leitrim. I would suggest that the Board would try and find out the mineral resources of Leitrim. Now how is this to be done? Geologists cannot tell us. We have the stethoscope which tells of what is going on in the human system by sound. We have the X rays by which we can see what is going on in the human system, but we have no such means of discovering things hidden in the earth. What then should be done? Put down bore holes. In India, some thirty years ago, there was no coal; the trains were worked by wood fuel. The Government put down bore holes up and down the country. By this means they discovered vast coal fields, and in the search they found salt mines, iron mines, and oil springs. Now India has a plentiful supply of coal and other minerals. It is said by some eminent engineers that the coal fields of Arigna are being but skimmed over, that the best coal seams are never reached at all. There should be a bore hole, 500 feet deep, put down at Arigna, and in all probability it would be the beginning of a huge development of the mining industry in the Arigna Valley. The same should be done in the Slieveanierin Mountain, and it is almost certain a splendid coal-mining industry would be the result in that part of South Leitrim where there is nothing at present but congestion and poverty. There should be some industries started, such as the compression of peat. This would be a very useful industry in Leitrim. The compressed peat could easily be carried long distances, and this would economise time and labour. There is, at present, a great want of peat fuel in many parts of the country, and the price of coal at Arigna is prohibitive. Drainage, both field and arterial, and road accommodation are very urgently needed in Leitrim. In my parish alone there are twenty lakes, and in the vicinity of most of these there are stretches of swamps. By draining two or three feet of water off some of these lakes, which could be easily done, many a broad acre of land would become reclaimable and profitable.

34620. CHAIRMAN.—I think your first point is that there should be compulsory purchase of land. May I ask what you suggest as the terms on which this purchase should be carried out?—I would suggest that the Congested Districts Board should get legal powers, by the passing of the necessary Act, to buy up whatever lands would be required in order to relieve congestion. They would be the purchasers and there should be a tribunal to value the lands and give justice to landlord and tenants by fixing a fair purchase price.

34621. When you say justice to landlord and tenant what is your idea of what justice would be to the landlord?—A fair price, all things considered.

34622. The basis of your procedure would be to purchase on terms which would do justice to landlord and tenant?—Yes.

34623. Take first of all the case of the landlord: would you consider justice done if his land was purchased at a price which would leave him in a worse position than he was before?—That is an extreme case. If the common good demanded it I think it would be in the abstract, justice.

34624. That is to say if the land was wanted for the purposes of migration you think it is fair to take from him something which he possessed before?—I do.

34625. If the man has £300 a year it would be fair to buy the estate at a price which would leave him only £200 a year?—I think if the public good demanded it it would be fair in the abstract, but the tribunal I would like to see established would consider the matter and I am sure they would do justice, all things considered.

34626. But the public tribunal must have some guide?—It would be perfectly just if the public good demanded it, that the landlord should part with the land, even at a loss. I would go that far, because the claim of the public good is paramount.

34627. That is carrying compulsion rather far. It might apply to other things besides land?—I think it is an extreme case, but putting it as it is, I think that the public good demands that the landlord should suffer loss in order to relieve a grave public necessity.

34628. Is not it a new view of justice that the State should have the power of taking away from a man what he had before?—No; the State has the power of justly transferring the right to property, given an adequate just reason.

34629. Can you quote any case in any country where it has ever been done?—I recognise that the State has the power.

34630. The State has got the power to do anything it likes. It can take you and chop off your head?—It cannot, in justice, if I don't commit a crime. We are here considering the just use of the power of the State.

34631. It is omnipotent, and can pass laws to do anything, and it is conceivable that the State might pass a law to chop off people's heads even if they did not commit a crime. It is rather a strong thing to do; but is there any precedent for what you suggest?—It does not occur to my mind at present, except where land is required for a railway. In that case it can be compulsorily acquired.

34632-3. Mr. SUTHERLAND.—Is not it common enough in history?—It is, but I cannot quote any instances at present except where land is required for a railway or as a site for a National school.

34634. Most Rev. Dr. O'DONNELL.—Of course, when confiscations occurred, the land was taken without compensation?—It was.

34635. Mr. SUTHERLAND.—Did you hear of the Act of Satisfaction of Queen Elizabeth?—Justice was not

observed there. I take it we are discussing here only the case where property can be justly transferred by the State.

34636. Most Rev. Dr. O'DONNELL.—That case which you gave us where the rent went up after the new purchase looked like a case of appropriation of other people's property?—Yes, and as unjustly as in the case of the Act of Satisfaction.

34637. Mr. SUTHERLAND.—For an income thus raised should a landlord get full compensation?—For an income unjustly raised he should not get full compensation. I recognise that the State having the power can exercise it.

34638. Most Rev. Dr. O'DONNELL.—Probably it is a hypothetical case you were taking. You probably were facing the abstract problem of whether in any conceivable circumstances it would be justifiable to take a man's property and leave him afterwards at a loss?—Yes.

34639. Just face the concrete, and see how it would work out. It is not a question of abstraction. You would first of all say, would you, that property may be taken by compulsion?—Certainly.

34640. As a practical man what would you say as regards compensation to the person whose property was taken. Would you consider it right that the application of compulsion should not put him in any worse position than he occupied before the compulsion was exercised?—I think he should get a fair price for his property.

34641. CHAIRMAN.—Fair price is a very vague term?—The tribunal appointed, *omnibus pensatis*, would be the judge of the fair price. It may be that a man may owe some restitution to his tenants, and in that case less than the full value of the land would be a fair price.

34642. Most Rev. Dr. O'DONNELL.—You conceive that after the exorbitant rents of the past he may not now have a claim to be left after the exercise of compulsion in the same position as he was before compulsion?—Yes.

34643. But take the case in which that does not come in, in which the tribunal fixing the price will not have that before them or will not take cognizance of it. It is a question simply of expropriating someone without any reference to the way in which he came into his property or managed it. In these circumstances what reply would you give? Would you say in the first place that he should get a fair price?—I would.

34644. Next, would you consider it equitable that he should not be put in a worse position by the exercise of compulsion?—I think he should not.

34645. CHAIRMAN.—Is it your view that so long as there is a public need for any special commodity it is justifiable that the State should take that commodity no matter what position it leaves the original owner in?—I have answered your lordship on that point.

34646. Would you mind answering my general question on that point—in your view, so long as there is a public want for a commodity the State has the right to acquire that commodity, no matter what position it leaves the former owner in?—It has.

34647. Land is not the only commodity which is needed?—No.

34648. Fuel is also needed?—Yes.

34649. Suppose turf banks were exhausted in Leitrim and there was an absolute necessity for the people to obtain coal, would you say that the people of Leitrim would have the right to acquire the Arigna mines, leaving the former company in a much worse position than they occupied before?—No. It is the right of the State if the public good required it and could not be satisfied in any other way that the State could appropriate those coal mines, and give them to the public.

34650. And purchase them irrespective altogether of the return that they were giving to the former company?—There should be a fair value put upon them.

34651. Is not a fair value the value to the man who holds it?—I would say that the fair value, practically speaking, is what would appear to be the fair value to the official tribunal that would be established.

34652. Is not the fair value the value which property of any kind represents to the man who owns that property?—Yes.

34653. If it can be shown by the owners of the Arigna mines that they are making £3,000 a year out of that property, would it be fair for the State to acquire these mines compulsorily, and leave the owners with a sum of money which would only give them £2,000?—No. The State should give them a fair price for it.

34654. The State should buy them out at a price which would return them what they were deriving before?—Yes.

34655. What is the difference between mining property and landed property?—The owners of landed property may have been exorbitant in the price that they charged for it in the past. They may have charged the maximum premium, which is always an unjust premium, and therefore may have extorted from those people so much in the past that really they ought to part with property on cheaper terms in order to make up to those people for what they took from them by the maximum premium.

34656. Do you seriously wish to put forward that argument after twenty-six years' fixation of rents; do you say after twenty-six years, during which the fixing of rents was not left to the landlords at all, but to a State tribunal, you should now penalise the owner because rents have been in the opinion of certain people too high?—No. The case put to me was a particular hypothetical case. I took it, abstracting it altogether from the fixing of fair rents. I took it on its own merits. In my parish a landlord has refused to fix rents, and made some tenants future tenants, so that they cannot get rents fixed, and they charge them, as I would say if I was a Land Commissioner on my oath, twice the value of the land.

34657. Sir JOHN COLOMB.—Is it since 1881 that the landlord put the exorbitant rents upon the tenants?—The landlord put on exorbitant rents, as you call them, about fifty-one years ago when he purchased the property.

34658. Lord Dudley put it to you that for the last 26 years it was impossible to fix exorbitant rents, and if those rents were exorbitant before 1881 the tenants could have secured the proper adjustment of them by an independent judicial tribunal—the Land Commission?—Yes, but the judicial rent is often too high, because in fixing it the tribunal does not take into account the excessive rent extorted in the past.

34659. CHAIRMAN.—It is not a question for the landlord whether a future tenant goes into court or not?—It is.

34660. A future tenant cannot go into court except the landlord agrees to give him the required status?—He cannot, and therefore he can be fleeced by the landlord.

34661. You say the landlord prevents future tenants from going into court, but the Land Act does not apply to future tenants?—According to the Act of '81 a future tenant cannot go into court by any means.

34662. Is not it a fact that the Land Act does not apply to future tenants?—Precisely.

34663. There is no provision for fixing fair rents on them?—There is not.

34664. If that is so, why is the landlord to blame for preventing future tenants from going into court?—He is to blame, because he makes them future tenants in order to prevent them from going into court. I will give an instance of a tenant, a most industrious man, who lives within half a mile of my place. He failed from poverty to pay his rent twenty-six years ago. He was evicted with his family, and the landlord or his agent put him in again, but put him in as a future tenant. Since I became parish priest of Fenagh this poor man came to me and told me his sad case, and he is certainly paying twice the value of the land. He asked me to speak to the new agent, and I spoke to the new agent, and asked him to take the millstone from the neck of this poor tenant, and make him a judicial tenant and allow him into court, and he said—"I will call out and see his land and see what can be done," but he never came, and never removed this bar to the man going into court, and he never can go into court as long as he is a future tenant.

34665. Suppose he had gone into court before he was evicted?—No. It was just about the time the Act was passed. He had not time to go in when he was evicted.

34666. That supposes a case before the Act of 1881 applied?—The Act was passed, but he did not go in. He was in arrears of rent. When the Act first passed anyone in arrears could not go in, because the landlord would swoop down upon him for the arrears.

Apr. 27, 1907.

Rev. Denis Gray.

He was evicted. Then he was let back again as a future tenant. It is the same landlord.

34667. Mr. SUTHERLAND.—He became a future tenant after the passing of the Act?—Certainly.

34668. Sir JOHN COLOMB.—On the passing of the Act of 1881 this man became a present tenant under that Act?—Yes.

34669. You said he did not go into court because he had not time, but had he lodged his notice he could not have been proceeded against until the case was heard?—If he was in arrears he could not go in.

34670. That is your point—that this is a peculiar hardship?—Yes.

34671. Since he was put back the man was continued as a future tenant at the old rent?—Yes.

34672. But he has got security of tenure?—No security. He is a future tenant.

34673. Is it not the case that if the landlord wanted to disturb that man he would have to pay him up to seven years' rent as compensation for disturbance and also pay him for his improvements?—I don't know the intricacies of the law about compensation for disturbance. I could not go into that. I am not sure that compensation for disturbance applies to future tenants, but even though it does the little compensation they would get would keep them a very short time out of the workhouse.

34674. You can look it up—you need not take it from me, but you will find it does. With regard to compulsory purchase, let me ask you this—would you apply compulsion in the case of a landlord who is ready to sell at twenty-four years' purchase while the tenants won't give more than twenty?—In the congested areas?

34675. Anywhere—take the congested areas. I am rather dealing with the question of direct sale to the tenants, and I want to get an illustration. The landlord wants twenty-four years' purchase and the tenants will only agree to give twenty. Of course, if the landlord won't come down and the tenants won't advance that stops the sale. In that case would you apply compulsion?—I would not apply compulsion in that case, but would try to make an amicable compromise.

34676. That is not one of the cases which you have in your mind as requiring the application of compulsion?—It is not.

34677. Now, coming to the question of land necessary to relieve congestion, if there was 100 acres of grass land required would you apply compulsion to acquire that land for the relief of congestion?—If it could not be acquired by an amicable sale I would certainly.

34678. For a matter of public necessity?—Grave public necessity.

34679. Suppose the grass land belongs to an adjoining farmer and is worked as part of his farm, and the same difficulty occurs, would you apply compulsion to him—suppose from father to son the tenants have been improving tenants and saved money, and they buy this 100 acres of grass land when it is up for sale with the money which they saved as a result of their industry, would you, in order to get this land to relieve congestion, apply compulsion in that case?—No, that would be a residential farm.

34680. Then you would exclude the residential land holder?—I would, if his farm was a residential one.

34681. Let me take the case of a shopkeeper—a common enough case—of a young man with nothing in the world to look after except himself, who goes into a shop as a clerk, and by his intelligence and industry finally becomes a shopkeeper. By his own industry and exertions he acquires some capital. A grazing farm of 100 acres some five or six miles off is for sale, and he acquires it and works it as a grazing farm because it pays him best. Would you in that case apply compulsory purchase for the relief of congestion?—Yes; if there was no prospect of his making it a residential farm I would compulsorily acquire it for the relief of congestion.

34682. Therefore you would apply compulsion to everybody except a farmer?—A residential farmer.

34683. Take, then, the case of a farmer who has a residential holding, and adjoining it is another farm which he has—would you consider that latter farm non-residential?—It is practically residential. It is part and parcel of his holding, and should not be divided, because if you bring down everything to a dead level you will be inflicting injury. One reason is there is a great craze for building labourers' cottages. The country is dotted over with them. If you do not leave some men to afford means of labour to the cottiers by giving them work, the rent of the cottages will devolve on the rates, and it will be indirectly inflicting an injury upon the farmers.

34684. I understood you to attribute the going back of the land to poverty and the absence of labour, which we all lament?—That is one of the causes.

34685. It is so important a cause that you would consider it a primary cause?—It is one of the principal causes.

34686. That being so, I take it is a primary cause of the land not being worked sufficiently?—Yes.

34687. And therefore of the produce coming from the land not being what it ought to be?—Precisely.

34688. I observed when you were paying that quite eloquent tribute—and I was very glad to hear it—to the work of the parish committees, you said you really believed that the parish committees with larger means would so assist the farmers that they would double their output and double the value of their holdings?—I believe they would.

34689. You say land is going back for the want of labour, but you also say that the parish committees might double the output?—Yes, I am talking of our county. I think if we take a farmer into our hands and give him enough money to enable him to put the labour, which is the best of all manures, into the land, and also give him instruction as to how to apply manures and other matters, that it would be the means of doubling the produce of the land, compared with what it is at present.

34690. Do you think that the action alone of the parish committees would have the effect of keeping more labour in the country?—I do.

34691. Most Rev. Dr. O'DONNELL.—Suppose a tenant went into court after the passing of the Land Act of 1881 the Act had no retrospective effect?—No.

34692. If the rents had been very high before it had no effect on the excess that had been charged in the past?—None.

34693. It would appear to me that your views have been a great deal coloured by that consideration?—Yes.

34694. Take that O'Beirne property. After it was purchased the rents were more than doubled?—Yes.

34695. And the operations of the Land Commission had nothing to do with the increases of rent from the time the rents were raised until 1881?—Not the slightest effect.

34696. Probably that underlies the answer you gave to Lord Dudley when you said that the State might apply compulsion to an owner, and not give him a sum corresponding to that which he now enjoys?—Certainly.

34697. After the passage of the Land Act in 1881 it could scarcely be expected by the legislature that all the tenant-farmers of the country would tumble head over heels into the courts?—It is not possible.

34698. Do you think was the existence of arrears one of the causes of keeping them out of court?—I am sure it was.

34699. They might be pursued for arrears at any time?—Yes.

34700. Might not the tenant to this day be proceeded against for arrears even if he had lodged his application with reference to a fair rent?—Of course, he might.

34701. As the law now stands a process of eviction can be carried on against him for only two years' rent, but he can be sued in an ordinary court of law for the balance?—Yes.

34702. However a tenant might be evicted. If he is again restored he is a future tenant?—He is, unless there is a special clause put in by the landlord making him a judicial tenant.

34703. You know that by the 17th section of the Act of 1896 these men can, by mutual agreement, be made judicial tenants?—They can.

34704. But, as a rule, evicted tenants when restored are future tenants?—Yes; that is the rule if the landlord wants still to fleece them.

34705. If they are sent about their business out of the holding they will be entitled to compensation for disturbance; but I suppose we might take it that that compensation for disturbance would be a very poor provision for the future of that man?—It would be a poor set off for the workhouse or the emigrant ship.

34706. Has he any chance unless he is fixed to his holding?—Not the slightest. It is the only chance for himself and his family.

34707. I don't quite understand one of the answers you gave Sir John Colomb about compulsion. You would apply compulsion to landlords?—I would.

34708. Only when necessary for the public good?—Yes.

34709. You laid down the doctrine that the State might, for the public good, take a man's property without fully compensating him; that was an abstract proposition, as I understood?—Yes.

34710. The State can make a law enforcing conscription and do other things, for which a man is not compensated?—Yes; I hold it as an abstract principle that the State can do that.

34711. Take the case of the tenant on that principle. Even if the tenant suffered you should be entitled to take his property for the public good?—Certainly.

34712. Suppose the State require the tenant's property and the State could not fully compensate the tenant?—The same principle would apply.

34713. That is your theory, but coming down to the concrete facts, suppose in a district there is no land in a landlord's hands, while there are some large tenants who could get on fairly well if they were compensated, and there are other men on the border with uneconomic holdings which cannot be enlarged unless you take the land of these larger tenants; in that case would you apply compulsion to the tenant if he is not a reasonable man?—I would, on the same principle as I would to the landlord.

34714. Suppose the shopkeeper had acquired land which is not necessary for his business as a shopkeeper, and is required for the small men around?—Certainly, I would apply the same rule to him.

34715. Taking it all round, suppose the Congested Districts Board were empowered to take land by compulsion for the relief of congestion, would you take it as a guiding principle that those to whom it is applied—landlords, tenants, or shopkeepers—ought not to be in a worse position than they were before the land was taken?—I would.

34716. I was greatly interested in what you said about Parish Committees, and in your replies to Sir John Colomb about them. I do not think we have had a truer appreciation of the power of the Parish Committees to elicit the best energies and best qualities of the people than we have had from you. May I suggest you should send a copy of that portion of your evidence—although he will get the entire of it in the ordinary course—on to the Secretary to the Congested Districts Board?—Very well. I will.

34717. Mr. Sutherland.—One word as to the difficulty of getting tenant and landlord to agree as to price. We have had it frequently in evidence before us that there is no need for compulsion, on the ground that the landlord is perfectly ready to sell provided he gets a reasonable price?—Of course there is no need then.

34718. In that case it is a question of agreement as to what is a reasonable price?—Yes.

34719. I presume you hold that no man ought to be a judge in his own case?—I hold that.

34720. The difference of opinion between parties willing to sell and parties willing to buy is only one of price, and in your opinion this should be settled by an impartial tribunal?—Yes.

34721. There would be no great difficulty in getting this done?—I am sure it would not be beyond the wit of man to find a way of doing it.

34722. Of course there are equities on both sides?—Of course there are.

34723. It would be for an impartial tribunal to settle; you don't see anything wrong in that?—I do not.

34724. So when you come to close quarters the question is not so formidable after all?—I think so.

34725. I suppose before 1881 there was not much talk of compensation between landlord and tenant in Ireland?—It did not come up for consideration.

34726. You made a remarkable statement that only 59 per cent. of the children attend school?—Yes.

34727. Can the summary power to compel attendance at school not be applied in Ireland?—I would like to try every other means before applying compulsion.

34728. Are you certain you have paid £77,000 on account of that railway?—Yes; during eighteen or nineteen years the guarantees necessary to make up the deficit in the earnings so as to pay the dividend of 5 per cent. amounted to that sum.

Apr 27, 1907. Rev. Denis Gray.

34729. Mr. Kavanagh.—You know that there is a compulsory education law in Ireland and that it is applied in some counties?—Yes, but I would not like to try it until every other means failed. I think the managers are in a position to use all the compulsion that is desirable. Where you use it in a mild way you can get some of them to school, but where they are at home working on the land you could not possibly force them to come to school or they would starve in winter. I knew one farmer in my neighbourhood with five acres, during eight years, at the latter end of his life—he died at 104—to labour continuously on his patch of land, and I never saw anyone working there except himself. There is another man, eight-seven years old, with four acres, and he has not a soul to till it except himself. I see him every day. So it is a union of the very young with the very old—*juvenes cum senioribus.*

34730. Your argument is that compulsory attendance at school would take away the labour from the fields?—Yes.

34731. You would favour applying compulsion to landlord, tenant, farmer, and shopkeeper?—Yes.

34732. Would you see any difference between the man who works his own grass land and the man who lets it on the eleven months' system?—Certainly. The man who works it would be likely to give work to labourers, but the man who works it on the eleven months' system should certainly have compulsion put upon him in every case.

34733. Would you apply compulsion to the man who absolutely worked the land himself?—That is, tilled it?

34734. A man has two holdings; he lives on the one, and five or ten miles away he has a grass farm on the other, but he works the two in connection. He tills a great portion of the farm he lives on and uses the other to put out his cattle; would you make any difference in applying compulsion between that man and the man who works on the eleven months' system?—Yes, I would look on the two farms as practically one residential farm.

34735. Therefore, you say that compulsion is not to apply to residential tenants?—Yes.

34736. You would go further and say you would not touch any farm that a residential tenant had reserved and was using for his own advantage?—In connection with the agricultural farm that he had at home, but if he let it as a grazing farm on the eleven months' system then I should permit compulsion. In the other case it would be practically all one farm that would give a chance to labourers to earn their own livelihood. Therefore, I say these holdings would be essential, else you would have labourers unable to pay the rents of their cottages, which would add to the rates levied on the farmers.

34737. A shopkeeper has a good deal of grazing round a town, and perhaps uses it himself or perhaps lets it out as accommodation land to the people of that town, suppose you applied compulsion to that man and took the land and gave it to migrants, that would be a hardship not only to himself but to the whole town; would not you look on grass land around the town as somewhat different land from the grass land far away?—I would make very little difference. The needs of the town are not so extreme as the needs of the migrants. Therefore I would give it to the migrants.

34738. The needs of the town for the accommodation of cows are very great?—I admit it is a need, but it is nothing at all in the balance against the need of the migrant.

34739. Sir John Colomb.—As a general principle do you think where the State carries out a policy which involves loss that any individual or class of individuals should bear that loss, or that it is only reasonable that the State should bear it?—I think it is best that the State should bear it.

34740. Chairman.—You said that so stimulating was the effect of the Parish Committee that under its influence nearly all the land in this part of the world could be made to yield double what it now does?—Yes. I am taking my own parish, and the work of our Committee.

34741. If that is so I don't understand why you say at the same time that the rent is too high. The rent surely is not fixed on the energies or the agricultural

Apr. 27, 1907.

Rev. Denis Gray.

knowledge of the holder but on the capability of the land, the power of the land to return a certain amount of produce?—I hold that capability should be largely taken into account.

34742. Do you mean to say that you would fix a rent on the character and energy of the person who tills the land?—No.

34743. You would regard all men as equal from the point of view of fixing rent?—Yes.

34744. Therefore, if you don't fix rent on the character of the person you must fix it on the capability of the soil?—That is a great deal of the principle upon which it is fixed, the value of the soil; but I would not hold that it would be justice to fix a rent on the capacity of the soil, because an exceedingly industrious, hardworking man will slave and knock more out of it than an ordinary man would. It would not be justice that the rent should be raised in accordance with his extra industry.

34745. Then, I understand you would fix it on a sort of medium scale?—Yes; what an ordinary man would do in ordinary circumstances; then the capability of the soil would be taken into account according to what he would do, but if you were to fix the rent on the capability of the soil as worked by a man who would slave at it, and receive a great deal of extraneous aid, it would be unjust to take this man as a standard.

34746. You say it would not be fair to fix the rent on the full capability of the soil because it would mean that a man would have to till it up to its utmost in order to earn the rent?—Yes.

34747. You say you must leave a margin?—Precisely.

34748. Would you go so far as to say that a half should be the margin; because, look at what your statement involves; you say on the one hand that the rent is too high, and on the other hand if the holdings were worked to the full extent double the returns could be derived?—Yes, because of the means the parish committee would use to secure that result.

34749. But, as a fact, if these holdings were tilled as they could be tilled they would earn double the amount?—Exactly.

34750. That means that at present they are being tilled to produce one-half the amount of which they are capable?—Precisely.

34751. Therefore, the rent is probably at present on half the real capability of the soil?—In the case I contemplate extraordinary help is given to the tenant, but I mean that the rent is to be fixed on the possibilities of the land as worked by an ordinary tenant, without this help. I am bringing in extraneous aid, and that is not a thing you are to take into account in fixing the fair rent.

34752. You bring in machinery which will increase the tenant's energies and knowledge; that is the method by which it is done; but at present is not it the fact that the rent is payable on half the capabilities of the holding?—Just take the case of a man in my neighbourhood, who is paying £1 an acre for his land. I give him plenty of money and labour and he works up his land so that it may be worth £3 an acre. Is the rent to be raised because I am kind to that man?

34753. No; let us take this point. The gross return of a holding is £10 a year. There is £1 rent, and he complains that his rent is too nigh. Assume, as you say, that if his energy is stimulated he can, as a matter of fact, get £20 out of his holding?—Through extraneous aid. The aid we give him does not come from himself. It is assistance we give him, and when the rent was being fixed it was never contemplated he would have such a kind friend to enable him to knock more out of the land than he otherwise would.

34754. Take the question of drainage. You say to the man that if he drains his holding in a way that you approve of you will give him a certain grant. In view of that aid that man drains his holding, makes roads, and provides other improvements. By those means he is enabled to get £20 a year out of his holding where formerly he could only get £10. The original rent of £1 would not press on him if he could get double the return from his holding?—This is altogether a thing that was not to be expected when the rent was fixed. It was not contemplated that a special parish Providence would come to his aid.

34755. I don't say you should raise his rent. All I want to point out is it seems to me that the two things are inconsistent, and that probably the reason his rent weighs upon him is because he is not getting the full amount out of his holding, and that if he did get the full amount out of his holding it is a proper judicial rent?—Precisely; if you work it to the very last possibility, but many can scarcely work it to its lowest possibility much less its highest possibility. You have an illustration of this in the cases I gave you of the high rents. These people, the young and the old men working the lands will never make the rent; but if an army of friends comes to assist them, as the Parish Committee may be called, and thus made the land yield double produce and the landlord was to have a right to that, then justice would be blown to the skies.

34756. You compare the Parish Committee to an army of friends as if the whole character of the soil was changed by some beneficent authority; as a matter of fact the man does it himself, only you stimulate him; the army of friends is the man himself?—They instruct him to do it; they give him the means, without which he never could have done it himself.

34757. You stimulate him. You don't give any machinery that he had not before. All you do is to encourage him?—When God gave to David the power to hurl the stone was not it the very same? We are giving him a power he had not before. Is he to be rack-rented because we are giving him this power?

34758. No; that is another point. I don't say his rent should be increased. I only say would he feel the pressure of his judicial rent fixed by the Commissioners if he were to work up his holding to the extent you say it can be worked?—It is impossible for him if left to his own unaided resources.

34759. Even with the assistance of the parish committee?—He can do nothing without it.

34760. With the parish committee he is able?—Yes. they would enable him to accomplish what was before impossible.

34761. Would you suggest that the parish committee should aid him to double the yield of his holding and that at the same time the rent should be reduced?—No; I never thought of the rent being reduced because of the aid of the parish committee.

34762. Then when you complain of the rent being too high you are not complaining of the reductions of the Commissioners in fixing the amount?—I think it is too high, and in the cases quoted anyone can see the reductions were inadequate.

34763. Do you contemplate it remaining too high or do you mean that it should be lowered?—Justice demands that it be lowered.

34764. Then you do wish it reduced?—Of course, I do.

34765. Then you say you wish the parish committee to stimulate the energy of the man to double the yield of his holding and at the same time reduce his rent?—I think if you allow it to be kept at the figure it is at because of the help we give him then you are putting a rent on the help we give him, and not upon the proper principle at all.

34766. Is not the proper way to look at it this that you are stimulating him to so till his holding, so that he will be able quite easily to pay the rent which is fixed upon the holding?—Of course he will be able to pay because he is helped, but taking him as he is without any extraneous aid he is not able to make the rent and live up to any fair standard of human comfort.

Mr. Michael Roddy examined.

Mr. Michael Roddy.

34767. Chairman.—You are a farmer?—Yes. I live at Dromany, Aughnasheelan.

34768. What is the size of your holding?—About eighteen statute acres, with a valuation of between £9 and £10.

34769. What sort of land is it?—It is hill land and low land—all bog land.

34770. How many acres do you till?—About 1½ or 2 acres Irish.

34771. What do you do with the rest of the holding?—I work it as a mixed farm. I keep cows upon it, and I meadow it, and graze it during the winter for the hay, and the crops feed the pigs and serve the use of the house.

34772. You keep milch cows?—Yes.

34773. Where do you sell the milk?—At the creamery here.

34774. How much do you get per gallon for the milk in the creamery?—From 3*d.* to 4*d.* per gallon.

34775. Is it more often 3*d.* than 4*d.*?—It is seldom so low as 3*d.* It goes from 3.40*d.* to 3.70*d.* a gallon, or an average of 3·55. I don't think I ever heard of the one price for two months running.

34776. What do you feed the cows on?—On the grass in the summer season, and on the hay in the winter.

34777. Do you give the calves separated milk?—You must feed the calves on the natural milk until they are eight weeks old, and then you can mix meal with the separated milk, and the calves begin to get on.

34778. Is it your experience that the calves do as well now as they did before the creameries were established?—Certainly, if they are fed as I say. I had last season as good calves as ever I reared, and they were fed in the way I say.

34779. Do you make more money by selling your milk to creameries than you did before by making the butter and selling it?—I did not keep an exact account of all I made, but I think it is about the same; but there are many things to be taken into consideration as well as the price. It is a saving of labour—the sending of it.

34780. But the labour was your own family; did not the wives and daughters of the family make the butter before?—Yes; they did. Where there was a good, well-trained butter-maker they would run the creameries close, but in the ordinary course of things, the butter in the country was not up to the standard.

34781. Where the butter-making before was very good there was not very much difference in price, but all the butter-making was not good, and where the butter was made badly they could get more by selling the milk?—Yes; bad butter-makers would make more in the creameries than in the market.

34782. I suppose the majority were bad butter-makers?—I would not say that, but there was a great deal of bad butter in the local market, and there was a good deal of difference in the price in the local market.

34783. Is there anything else specially that you would like to tell us?—Yes. I was sent here by the local branch of the League at Aughnasheelan about the relief of congestion. I am a member of the parish committee. They recommend the purchase of land in our district through the agency of the Congested Districts Board, and the relief of congestion in our district by migration and adding cutaway bogs to enlarge holdings to assist the small holders to improve their productive powers.

34784. How do you think that could best be done?—The best agency we ever saw in the country, if it was properly worked and extended, was the parish committee, but all it has done is only a slight beginning towards its possibilities. It wants to be extended and the limits of its operations should be raised from £7 to £10 valuation.

34785. Do you think the people in your district would migrate?—I asked several of them since this Royal Commission started. Some of them would agree to go if they got a place within a reasonable distance. Several would go the length of ten or twenty miles, and would be very glad to go.

34786. What sort of people were they whom you asked. Had they got holdings themselves?—I am referring to small holders who have some land that they cannot live out of.

34787. They were heads of families themselves?—Yes, fathers of families.

34788. Don't you think they would go further than ten or twenty miles?—I think perhaps they might go.

34789. Suppose there was not enough land for them in the County Leitrim would they go to Roscommon?—Some of them might go, but still it would not be easy. There would be no obstruction if we had them for young men, while we have fine young men and girls going to America.

34790. They would migrate to any part of Ireland?—Yes.

34791. What is the objection to the distance; if a man would move twenty miles with his wife and family why should he not move thirty miles?—They would not have such a hard and fast line in that way.

34792. It is a question of this county or any other county?—It is a question of connection with immediate relations, friends, and neighbours.

34793. If they moved twenty miles they would go out of the district in which they knew the people: so if they had to go into a new district does it matter whether the distance is ten or twenty miles near or further?—It will in the beginning, anyway until they wear off their notions of home.

34794. Do you think any men would say they would go to the County Leitrim, but not to any other county?—No, but a man would go twenty miles. If several people were to go together they would go thirty or forty miles.

34795. You think if several people went and succeeded others would be glad to follow?—Yes, and if you would send colonies they would go more readily than by themselves, a group of five or six. We think by getting land and assisting migration congestion could be relieved, and some agency like the Parish Committees, where there are cutaway bogs and turbary, should be able to add them to small holdings in order to improve the production of the piece of land the people have.

34796. Mr. Sutherland.—Is there much cutaway bog available?—In the mountain bar across there is a considerable amount.

34797. Sir John Colomb.—Taking the case of a tenant with a small patch of good land and a large tract of bog land, what you mean is to assist that tenant to reclaim more of the bogland?—Where there are cutaway bogs they are generally the property of the landlord, and the whole bog is in turbary going away. There should be assistance given to reclaim it and add it to adjoining small holdings. That would leave the people a better way of living.

34798. You don't mean a tenant who has only bogland should be assisted to reclaim bogland?—I think it should be done in the same way as the Parish Committee at present work.

34799. You mean to say that some means should be taken where there is bogland beyond the tenant's own holding, to acquire that land and then assist him to reclaim it?—If there was plenty of bog adjoining the holding no matter whom it belonged to it would be a good thing to acquire it and give him the means of reclaiming it.

34800. If there is a tract of bogland not occupied by tenants and there are tenants adjoining it, to whom it would be profitable to reclaim it, you would like powers to enable the Parish Committee to secure that bog for them and help them to reclaim it?—The Parish Committee or some agency like it. The Parish Committee is the best I have seen yet.

34801. Most Rev. Dr. O'Donnell.—In solving the problem of congestion the first means is to migrate people to better holdings?—Yes.

34802. Then you think that the Parish Committee could do a great deal to improve the holdings by drainage and reclamation?—Yes, I do.

34803. You consider if the people got a little encouragement in the shape of a small grant more drainage could be done than at present and more bogland could be reclaimed in case the boglands were given them?—Yes. That is my opinion with regard to that, and the Committee have discussed it and have come to the same conclusion.

34804. Are there mountainous tracts in the district you know best?—Yes; Graghlass and Stralongford.

34805. Is the population mainly on the mountain sides or are there people in low valleys?—The whole parish of Ballinamore, or the principal part of the district around is congested. In one electoral division of Ballinamore the holdings are fairly large, but outside that they are all small holdings, mostly under the living standard.

34806. Have you noticed in some of the divisions not scheduled as congested very poor spots?—Yes, some as poor as in any division.

34807. You would like it to be possible for the Parish Committee to attend to these?—Yes; I know instances of poor men across the mearing who are quite as much in need of assistance as the men beside them who are scheduled.

Apr. 27, 1907.

Mr. Michael Reddy.

34808. You say the limit should be £10?—Yes, raised from £7 to £10.

34809. If they had increased grants and the limit were raised a great deal could be done?—It won't be a remedy for everything, but it will improve the present state.

34810. CHAIRMAN.—Does the Department of Agriculture do anything in this part of the world to stimulate the people?—That is a thing the Committee directed me to speak on. The Department of Agriculture in this county is useless up to this, and almost everything else except the Parish Committee. We don't think ourselves fairly treated by the Congested Districts Board, without meaning any imputation on any body of men, with regard to the distribution of the funds.

34811. The County Committee does not work here?—The County Committee of Agriculture and Technical Instruction sent round some lecturers. I saw no practical use in it. You might as well give them a lecture in Latin or Greek as to have a man coming round once in twelve months. It is not worth paying carriage for.

34812. You think a resident instructor would be much more practical?—I think it would be the proper thing to do if funds at present administered were handed over with the funds we have already to the Parish Committee. They would make one hundred times more use of it, for we can see nothing after the other.

34813. Who is the representative in this part of the world of the County Committee?—There are gentlemen on it better than I, who am only a plain working farmer. There is the Chairman of our Rural District Council, Mr. Kane.

34814. Were you on the County Committee?—No. Father Gray is a member of it, and I think all the County Councillors are members. They had a larger committee some time ago, and they re-arranged it.

34815. Have you pointed out to the people on the County Committee that the present methods are not much use?—Yes; we talked to some of the members about it. They don't seem to be able to mend it.

34816. Have they ever tried, do you know?—They are working away.

34817. With no results?—Whatever it may have done for other parts of the country, at any rate in our parish we are nothing the better of it.

34818. Have you got any example plots about here?—Yes; we have got experimental plots this year. There is now for the first time one in our district.

34819. On good land or bad?—On medium land. It is as good as what the people have to live on generally.

34820. Who looks after that plot?—The owner of the farm gives the labour, which he applies according to the directions of the Committee's expert.

34821. Does anybody ever go to look at it?—It is only commencing now. There is not much time to look at it yet.

34822. What other point do you wish to refer to?—There should be a stop put at once to the practice of sales between poor tenants and landlords. Under pressure of arrears the tenants would give anything they are asked to give to get away from the load of arrears and the chance of being turned out altogether. I know cases myself of estates where agreements were signed for 21½ and 24½ years' purchase, and there were seven, eight, nine, and up to fifteen years arrears, and they have no security for 24½ years' purchase.

34823. There has not been very much buying and selling in this part of the world?—Not under the last Act. There have been a few sales under the previous Acts.

34824. Would you say that sales ought to be prevented direct from landlord to tenant?—There should be some safeguard to prevent the landlord from getting the upper hand. If a man gives twenty-four and a half years' purchase when he has not been able to pay for the last fourteen years, how are you going to get the annuities? The whole armies of England would not get it. I know estates in the district I am referring to sold under the Act of 1903, and other estates sold under previous Acts at sixteen, fifteen, and fourteen years' purchase.

34825. Do you object to direct sales under the old Act or under the new Act?—Tenants with a load of arrears are brought to make a bargain on whatever the landlord asks. If he asked thirty years' purchase, and insisted on it, they would sign it to get rid of arrears.

34826. You object to direct sale no matter whether they take place under the old Acts or the last Act?—I did not refer to the old Acts. There was nothing over sixteen years' purchase until the last Act.

34827. It is only to direct sale under the Act of 1903 that you object?—Yes; I object to direct sale between landlord and tenant. The landlord has the upper hand, and the county will have to pay the money for that poor tenant.

34828. Still it has not often occurred yet?—It has not, but the attempt has been made, and I know estates in the same locality where the tenants had to agree to the price because they were in the landlord's hands, while on the neighbouring estate the land has been offered at twenty-four and a half and twenty-one and a half years' purchase for the last two years, and the tenants won't take it.

34829. Sir JOHN COLOMB.—You have told us how you feed your cows in the summer and winter?—Yes.

34830. You treat them well in winter?—Yes.

34831. In order to make provision for the cows and calves in the winter what crops do you grow—any turnips?—Not much.

34832. Or any mangolds?—No; we have some plots of mangolds we labour occasionally, but not very much of it.

34833. What do you feed your cows on in the winter?—Principally upon the hay; altogether I may say.

34834. And the calves?—We feed them on the hay too; they might get some indian meal or milk, and several other foods of that kind.

34835. You don't make any butter at all in the winter?—There would be no butter in the winter because the cows are dry.

34836. The only thing you grow for the winter feeding for the cows is the hay?—That is all; they might use the straw sometimes by half threshing the oats.

34837. Did you attend any of the lectures of the Department lecturer?—Yes.

34838. You said it was like Greek; we have many people telling us the same thing. Did they tell you about mangolds and turnips, and the advantage of having some both for feeding the cattle and making more manure?—He told us a lot of things.

34839. Did he tell you that?—Yes; I could not remember half of what he told us.

34840. Did he tell the people the importance of making manure?—He did.

34841. Did he tell you of the importance in order to make manure in the winter for cropping in summer of having some mangolds and turnips to feed the cattle in winter?—Yes, and discussed it with local farmers; and what keeps back the growth of turnips to a great extent is the ravages of the fly.

34842. That was not Greek to the farmers?—That was quite reasonable. What I said about Greek and Latin was perhaps a little too strong, but I will not withdraw this that the general tone of the lecture was all right until you would come to put it in practice when it would be quite another thing. He told us how to plant potatoes and all that sort of thing. He did not tell us what to do when you come to sow oats on May Day that ought to be sowed on the 25th of March.

34843. Was the experimental plot cropped last year?—No. The only experimental plot in our district was about half an English acre of potatoes, and it is cropped at present, and you can crop lea fields, you can plant potatoes when you cannot sow oats.

34844. Do you mean the Commission to understand that the only thing grown on the experimental plot was potatoes?—The only experiment made in this locality was with potatoes. This is the first year it started.

34845. Have you seen or heard of any plots off which they take crops of turnips, mangolds, vetches, rye, or rape, or anything of that kind?—No.

34846. So far as your knowledge goes the only experimental plot to improve the knowledge of agriculture in your district has been laid down in potatoes?—Yes; in our district there was one plot of potatoes. This is the first time it has been done. It remains to be seen what it will do. There is one matter that the Congested Districts Board would do well to attend to. In this district there is a great want of assistance for cattle. We lose a great deal of cattle through the

wet seasons. A veterinary surgeon in Ballinamore or the neighbouring district is very much required, to go round among the poor holders. There is no doctor except a quack doctor in this locality, and the Committee think it would be a most useful thing if this defect could be remedied.

34847. Mr. SUTHERLAND.—Is there no veterinary surgeon in this neighbourhood?—There is no veterinary surgeon that I am aware of nearer than Boyle or Longford.

34848. They charge high for such assistance?—They seldom come down. It is no wonder they would charge when they have such a long distance to come.

Rev. MATTHEW KANE examined.

34849. CHAIRMAN.—Would you kindly mention any points that you wish to bring before us?—I live in a district which is congested, in the Ballinamore district. I have a good knowledge of the townlands that are scheduled, and have had full opportunities of observing the people and their habits. They are very poor people, and I believe that those in districts not scheduled are equally poor as those who live in scheduled districts. It is a mountain district and the crops depend upon the weather. Last year the people of the district had no potatoes. The potatoes failed completely, and the Congested Districts Board did not take any action with regard to alleviating their poverty except the usual dole they give out to each of these districts each year.

34850. The "usual dole" being the Parish Committees?—Yes.

34851. You regard the Parish Committee as a dole?—It is not at all equal to the wants of the place. We have, available for the relief of congestion in this place, 360 acres of untenanted land. There were evictions carried out in this district. I think it was in 1892. They were carried out with characteristic cruelty by the landlord.

34852. Characteristic cruelty?—It was quite convenient to this district.

34853. Is it characteristic of the district that there should be cruelties?—All landlords, without exception. I never knew of what might be called a good landlord, nor I never read of it.

34854. Is it characteristic of all landlords that they should be cruel?—That is my evidence. If I ever read of a good landlord I have forgotten it. In the case of this Stroke, that is a townland quite convenient to Ballinamore, in the year 1892, there was an agitation, following after a very bad year, to get the rents reduced. These people were not able to pay their rent and they came under notice of eviction. The agent of the property that lived near was not remarkable for much leniency, but he shrank from such an ordeal as putting them out. There was an emergency agent appointed under him to carry out the evictions, and they were carried out with that characteristic cruelty that I will just relate. He went out to the district and parafined the houses and burned the whole townland. He built slated houses for emergencymen on that townland, and I am told some of these men never paid a penny of rent since. Of course he put them in on the eleven months' system. The remedies I would suggest would be compulsory purchase at a moderate price; further grants to be made to the Congested Districts Board in order to meet the necessities of the districts, and I would suggest that this would come from the Treasury, and from the excesive taxation we are paying each year. We are paying four millions excess each year. According to their own experts Ireland has been robbed of more than two hundred millions since the Union. If that four million a year was distributed among the congested districts, and applied, say, to building suitable dairies, to drainage, and other reproductive works——

34855. How do you arrive at that four millions?—I have the Government's own experts.

34856. Can you give me the figures?—I cannot give the exact numbers. It is a very doubtful thing. It is far more in my opinion. It is Sexton I have the greatest reliance on. He leaves it at six millions. He is the greatest arithmetician in Ireland.

34857. Do you know what the present gross amount of taxation in Ireland is?—No.

34858. Nor do you know the gross amount spent?—I did not look myself for the figures. It is like a proposition in Euclid. I take it for granted though I might not be able to prove it, that two sides of a triangle are greater than the third.

34859. Am I to understand that you tell the Commission Ireland is overtaxed to the extent of four millions without taking the trouble to inquire the gross amount of taxation?—That is a question for experts. I will give you the case of another landlord. I know it myself. Before the Land Act of 1881 he took 2,000 acres of mountain for a grazing ranch for himself. It was very valuable land—limestone. He ran a mearing fence across it. He let small patches to the farmers at the foot of the mountain. He was not content with that, but raised the rent a shilling in the £ on them every successive year, to help them I suppose. Suppose a tenant was paying £10 one year it was £10 10*s.* the next year, and £11 the next, and £11 10*s.* the next, and so on.

34860. Mr. KAVANAGH.—What year was that?—That was before the Land Act of 1881. He was an absolute ruler then. He did not content himself with that, but I was passing one day a house and I remarked that there were no fowl about and I asked the woman of the house did she keep ducks and she said "No," and I asked why, and she said the landlord would not allow her to keep ducks. I asked her what was the reason of that, and she told me the landlord had a pond he fished in; there was a little stream passing the house, and he was afraid the ducks would take up some of the fry of the fish, and he would not allow her to keep ducks. There was one farmer in the place who had a lease, and the landlord used to keep a sluice out of his fish-pond, and this farmer had a right of irrigating his meadow, and he used to raise the sluice and let out the fish, and the children used to have great fun seeing the fish hopping about on the meadow. The landlord told him he would evict him, but he said, "You cannot, because I have a lease." I knew another agent. He was passing a road one day on a car, and he heard the sound of a shot. He was an magistrate, and an agent of the estate. He stopped the car. There was a young farmer's son, and he had some trees planted in front of his house. A school of magpies used to go on the top of the trees and pick the top of them and destroy them. He was after firing a shot at a magpie, and the agent asked him what did he fire the shot for. He said, "I killed a magpie; he was destroying the trees." "I will let you know," said the agent, "that you will fire no more shots, because I will raise your rent £1 a year." The case was heard afterwards in court, and the man was asked what was his rent raised £1 a year for and he said, "for killing a magpie." The agent did more than that. There was two young fellows in the country took it into their heads to have a boxing match. He was all-powerful. He could evict them if he liked. The father of the chap that was beaten went and complained. He went to the other father and he says: "You must send your son away out of the country"; "Why"? "Because he is too great a fighter; you will have to send him away." So he had to send him away or he would be evicted. Probably he is in the police force at present. The same agent got notices printed. He used to make a rule that if the tenant was not in at a certain day to pay his rent he would charge them ten shillings fine. Some were good enough to say he used to pocket it himself; but he got a picture of the landlord, a young man who was coming of age, and sold copies to the tenants at a shilling apiece, and the person who would not buy one for his drawing-room at home was no friend of his. The landlord came of age and was married and settled down on the estate, but the castle he was going to live in he took a charge of dynamite and blew it up. These are facts. The landlords must be bought out. There will be no peace in the country until they are gone. That is an argument for compulsory purchase. With regard to parish committees, my opinion is they are doing the best work they can on the very poor means they have. They ought to be provided for by the money

Apr. 27, 1907.

Rev. Matthew Kane.

we are being plundered of every year. There ought to be more attention paid to drainage and the building of dairies. These are reproductive works. As far as creameries are concerned there is a difference of opinion as to their usefulness, but one thing certain is that I don't like them. I believe they are a harm to the country, sending away the young girls, emigrating them as they have no work to do at home. It is demoralising the country. I heard an eminent doctor, talking about the children, say you would know on their faces going to school where there was a creamery, owing to the appearance that they presented for want of proper feeding. He said he believed well-made, home-made buttermilk on the old style was the best tonic he knew. I believe that drainage and the building of dairies should be, to a great extent, increased. If you had better dairies built, suitable to the farms, you could have good milk and butter made and industries for the people who have to emigrate.

34861. Don't you think there must be some method of seeing that the butter is of standard quality?—They could do that if they had these dairies built on the same plan through the country. Suppose some of the four millions was granted to build dairies then they could have a uniform standard of butter.

34862. Most Rev. Dr. O'Donnell.—A cottage dairy for each house?—Yes.

34863. Chairman.—Having erected these dairies with the four millions how do you propose to secure that the butter should be of uniform standard?—I would suggest they should have a few instructresses, but they are very good butter makers here.

34864. They never did this before?—They were not able to build dairies with the excessive rents and taxation.

34865. It is not a very expensive thing to build a dairy?—It would take £8 or £10 to build and equip a dairy. It would want to have hot water pipes in the winter to keep up the temperature. That would be in connection with the farm house.

34866. Mr. Sutherland.—The colder the dairy is the better?—In summer.

34867. Always?—You must keep it at a certain temperature all the year round, and it will fall lower in winter.

34868. Most Rev. Dr. O'Donnell.—They could build a dairy attached to the house and having an entrance to it from the outside?—Yes. It would not be difficult at all to do. Leitrim, as far as I can see, is behind the other counties in the amount of money it has got from the Congested Districts Board. I was president of the committee in Glenfarn for eight years, and we never got any money.

34869. Chairman.—Have you always been in the County Leitrim?—Most of my time; about eighteen years in the County Leitrim. Before that I was in Monaghan and Donegal. Bundoran was my first parish. We have in this district a coal mine. With regard to the Agricultural and Technical Department, I don't see what great good they are doing, but on the contrary you will get a very strong opinion that they are ruining the country with regard to the breed of cattle, horses, donkeys, pigs and fowl; they are not suited at all for the place. What I would suggest is, that some one connected with the Congested Districts Board should meet the parish committee and ask them what were the principal things to do for each district, because each district knows what is good for itself. In some places they went in mostly for agriculture, and in other places they went in mostly for rearing cattle, because it paid them better; the grass was fairly good and the labour was dear, the population was going and they had to leave it out in grass. In other parts of the country I was in they could not do that very long because there would be no grass at all in it in a short time. They had to keep it cropped. I knew another agent in the County Donegal, and he had no money of his own. When he was buying the property he borrowed it simply from a money lender in Dublin, and he doubled the rent when he bought the place, and the people were compelled to work themselvs to death's door in order to pay that rent.

34870. That was before the Act of 1881?—Yes, and he got a valuator on the land, and doubled the rent, and in order to pay the rent they had to sow the land with flax year after year. Everyone who knows anything about agriculture knows you will destroy the land if you do that. They had to do that until the land became as bare as the floor of this courthouse. With regard to the breed of horses and cattle, the country people here who are very well up in agriculture—we have as good farmers here as in any part of Ireland—tell me they are a total failure. They have destroyed the breed of horses in the first instance. The grand horses of the West, the carriage horses, are all ruined by crossing them with English horses sent over by the Agricultural Board. In the case of donkeys they have a few of them through the country; they are a total failure. They are not able to carry a back load, and they are harder to feed than a horse. The real old Irish donkey had to carry very heavy loads, and was easily fed. With regard to fowl, there was never any disease known in the fowl until the new breeds of fowl came into the country. They are not suited for it at all. The climate is too wet. With regard to the breeding of pigs, they are an absoluate failure, because the old Irish pig gave better bacon if properly fed. They had such long snouts, about a foot long. They used to plough the land in winter.

34871. Is it due to the Congested Districts Board that this remarkable breed has died out?—They have not died out I am very glad to say.

34872. Most Rev. Dr. O'Donnell.—Have you any special suggestion to make with regard to industries?—Yes; the building of dairies and drainage would be reproductive because they would go on not only this year but they would go on continually, and I think the money expended on drainage would help very much to improve the land. As regards emigration, if you are to stop it you must have home industries. The only home industry we have here is butter-making, and that is being destroyed by the creameries. In some districts it is destroyed entirely. They only keep one day's milk that is Saturdays, and churn on Monday.

34873. Mr. Kavanagh.—But I suppose they sell their milk because they get a better price?—On the contrary they say themselves that taking everything into account it is far better to keep the milk and butter at home and not sell it to the creameries at all.

34874. Why do they do it?—It is for an experiment I think.

34875. It is a co-operative creamery?—Yes.

34876. They all joined to start the creamery?—Yes.

34877. They have all considered the question?—Yes.

34878. Still they go on doing it?—They did not understand at first it would be a loss.

34879. Why do they go on doing it?—Like a person putting in money they venture it. Very probably at first they were advised to do it by others who had some authority with them, and thought it would be a better thing.

34880. Do they get the benefit of any profit on the society?—There has been no profit in this district.

34881. Chairman.—No profit for the district?—Not at all. The tenants never got a penny for their shares.

34882. What used they get in the old days for the butter they used to make themselves?—The price varied.

34883. Give us an average price?—I remember the time it was fifteen pence a lb., the time of the French war.

34884. Agricultural produce tended to be high at that time?—It came down to a shilling, 11*d.* and 10*d.* An average price would be 11*d.*

34885. In what year?—Every year since, except a few years after that.

34886. Take 1890?—The average would be 11*d.*

34887. How much milk would it take to make a lb. of butter?—About three gallons.

34888. How much a gallon do they get?—3½*d.* to 4*d.* It is the evidence of the country people I am giving. I did not go into the subject myself very minutely. I did not pay much attention to the creamery business because I was opposed to it. I merely showed its shortcomings.

34889. You showed its shortcomings without its advantages?—Yes.

34890. Mr. Sutherland.—Generally there has been no adequate return for all this money that has been spent on agriculture and these things in Ireland that is not spent in other countries?—I think it is fairly well spent as far as it goes.

34891. Everything you have told us is a record of failure?—As regards the Department of Agriculture and the breeds of cattle.

34892. Is it encouraging that there should be a record of failure?—Yes, but the fact is that I am only giving what I heard. It is not the fault of the County Committees. They are trying to do their best with what little pittances they get.

34893. Most Rev. Dr. O'Donnell.—I gather you think that the grants to the Parish Committees should be increased and the Committees consulted about the local schemes?—Yes.

34894. For the poorer classes of people you would be in favour of cottage dairies as against creameries?—Yes.

Mr. Patrick Mulvery examined.

34895. Chairman.—Where do you reside?—At Currabeer. Ballinamore. I am a farmer. I happen to be in charge of the work of the Congested Districts Board in this parish and wish to say a few words as to my experience there.

34896. Are you Supervisor of the parish committee schemes?—Yes. Our grant was £50. This is our third year of working. We had eighty applications, and finally we had fifty-six persons getting something of this grant. What I wish to draw attention to is the case of the very poor people who get no benefit from the grants, because they are not able to approach the committee with the necessary contribution towards the work. What the committee have decided on giving here in the case of improvements to houses and surroundings is one-fourth of the estimated actual value of the work. Poor people who want to get improvements effected cannot come with the necessary contribution to get the grant. These people are too busy earning a living for their families. They generally have five or six acres of land and they earn wages with the better-off people in the district, generally for a shilling a day and their support, and they devote a good deal of their time to that, or to labour in England or Scotland. Sending up my book to the Board last week I have referred to the necessity of getting at the very poor people that we are all anxious to help.

34897. You think it would be a help to the very poor people if the grant were larger and the contribution less?—I have written my views to the Board. If they would kindly instruct their own inspector I would point out those exceptional cases with a view to seeing what could be done.

34898. Mr. Sutherland.—Are there many such cases?—They are rather limited.

34899. Could you say what proportion they represent of the number you assist; are they one-fourth of the whole?—By no means. They are not one-sixth nor one-eighth. There are not a great many of them.

34900. Seven-eighths of them would be able to fulfil the conditions?—Yes; they are doing it punctually and creditably.

34901. Does the Congested Districts Board not give discretion to the Parish Commtitees to act as they think best in matters of this kind?—There is no power to deal with exceptional cases at all.

34902. Would your case be met if the rule were relaxed, and in some cases like those to which you refer you were enabled to give a larger proportion?—Yes. That is the point that I wished to bring forward when I heard that the Commission was sitting here. It has been pressing on my mind for some time past.

34903. Mr. Sutherland.—I think after the statement you have made here in presence of the Bishop, who is a member of the Congested Districts Board, your recommendation should have consideration.

34904. Most Rev. Dr. O'Donnell.—Quite so. It is very important. The cases you mention could be treated as exceptions?—Yes.

34905. There are people who cannot help themselves unless they got a grant almost equal to the improvement?—Yes.

The Commission adjourned.

APPENDICES.

INDEX TO APPENDICES.

APPENDIX II.

Documents put in by Sir Josslyn Gore-Booth in connection with the evidence given by him before the Commission.

A.—Notes of Evidence.

As I think they may be of use to the Commission, I hand in short statements dealing with the following:—

(1). Voluntary striping of grazing lands.
(2). Price of grazing lands.
(3). The growth of the co-operative movement.

With regard to (1):—

In the year 1901 I was asked by the neighbours to stripe a grazing farm of 153 statute acres. I replied, "Certainly, provided I do not lose by the transaction." They agreed that this was very fair, and the problem was tackled at once.

This farm had been used to take in grazing cattle from the neighbouring farmers. It was agreed that the net income should be taken in a five years' average of the returns from grazing, less expenses, *i.e.*, herd's salary, rates, etc.

Rough rules were drawn up, as—although the farm was not actually situated in a congested district—there were on the property several small farmers whom it was desired to assist.

These rough rules were embodied in an agreement drawn up by my agent, Mr. Cooper, and, as this agreement sets forth in clear language the basis on which the whole transaction was conceived and carried out, I give herewith copy of same (see Appendix B).

It is only right to mention that I was offered far larger sums in fines from neighbouring farmers whose holdings I did not consider required enlargement. The tenants were helped to raise these fines in the local bank by the parish priest, and I understand from him that these have long since been paid off. All the people who got these additions have done well and worked their land with great energy. It may be mentioned that in one case a holding situate about two miles from the grazing farm was equally divided between two small adjoining tenants, the latter paying for the tenant right of each half. The tenant selling was then provided with a new and better farm in Streamstown, paying the fine mostly with the money already received by him. He has already built a new slated house on this farm. The point which I wish to emphasise with regard to this striping is that it was done voluntarily, on business lines, with the people who required enlargements. No one has lost any money by this striping, and I am certain that the people are not only materially, but morally, the better for the transaction. On a visit some time ago I was immensely struck by the pride which the people took in their additions.

With reference to (2):—I am of opinion that a great deal of grazing land would be immediately available for the enlargement of holdings if the prices offered were fair ones, taking into consideration the previous average net income made by the landlord out of the farm. I would go further, and state that, in my opinion, many large graziers who have acquired judicial tenancies in their grazing lands would voluntarily give them up, provided they got fair compensation.

APPENDIX II.

The Commission can judge for themselves as to the unreasonableness, or otherwise, of the owners and occupiers of the grazing lands hesitating to offer same to the Government when they peruse the following cases which have actually happened on my own estates:—

CASE No. I.

Area.	P.L.V.	Average Net Income.	Price as valued by our Valuer.	Price offered by Land Commission.
A. R. P.	£	£	£	£
147 3 3	105	145	3,368	2,100

(Twenty-five times net income would be £3,625.)

I may mention that my late father bought the tenants' interest in this holding for £953 at the request of the adjoining tenants in order to provide them with accommodation land.

CASE No. II.

Area.	P.L.V.	Average Net Income.	Price as valued by our Valuer.	Price offered by Land Commission.
A. R. P.	£ s. d.	£	£	£
243 1 14	183 15 0	122	3,314	—

This grazing farm, together with mountain land, containing 894a. 2r. 18p., Poor Law valuation, £85 5*s.* 0*d.* (the total valuation, therefore, being £269) was offered by me to the Land Commission. The price offered by them for *all* was £1,739.

CASE No. III.

(Farm in tenant's hands jointly offered for striping).

Area.	P.L.V.	First Term Rent.	Landlord's Interest at 21½ Years' Purchase as agreed with Tenant.
A. R. P.	£ s. d.	£	£
354 0 8	250 5 0	240	5,169
	Price offered by Land Commission.		5,635
	Leaving for Tenant's Interest.		£466 (or less than two years' purchase).

I may mention that I have seen that Mr. Bryce stated in the House of Commons (in reply to a question asked by Mr. M'Hugh) that the prices paid by the Congested Districts Board varied from 28 years' purchase of the annual value of untenanted land to 29 years' purchase for 1906, with an average for the six years of $27\frac{3}{4}$ years.

Re No. (3):—

With regard to the possibility of improving the agricultural industry I should like to give an instance.

This is a good dairy county and I give the following figures taken from the audited accounts of three co-operative creameries in this neighbourhood for the years 1900 and 1906.

—	Share Capital		Turnover.		Net Profit (after depreciation).		Bank.		Reserve Fund.	
							Amounts overdrawn.	Cash in Bank.		
	1900.	1906.	1900.	1906	1900	1906.	1900.	1906.	1900.	1906.
	£		£	£	£	£	£	£	£	£
1	742	891	7,662	9,326	71	170	642	80	124	959
2	475	810	4,240	8,041	47	178	295	300	43	200
3	428	542	3,698	6,163	18	90	349	209	95	366

Practically every farmer within reach of these creameries supplies milk, is a member, and the creameries are owned by the farmers themselves. The figures prove that they are a business success, and I give them to show what the people can do to help themselves. The only assistance they got was the teaching of the Irish Agricultural Organisation Society. The people themselves have found the necessary capital and are working these creameries through committees of farmers elected by themselves. The possibilities of co-operation especially amongst small farmers are enormous, but unfortunately the I.A.O.S. has not the necessary funds to carry on an active propaganda.

To sum up. With regard to (1): I believe that grazing lands can mostly be striped without loss to anyone, except in certain cases in congested areas. I understand that even the Congested Districts Board in many cases charge fines in congested areas. On the other hand, the policy of the Land Commission in presumably much richer districts is, I am informed, to charge no fines whatever and give away a valuable asset for nothing.

With regard to (2), it is too early to ask for compulsion to acquire untenanted land, when (as in my case) a fair price, taking into account the previous net income is not forthcoming for granting lands voluntarily offered.

With regard to (3), I cannot do better than quote the following paragraph from Sir Horace Plunkett's Memorandum (page 10):—

"What we now need is a policy which has as its constant aim, not only the inculcation of the principles of self-help and self-reliance, but the making of these principles vital and operative through a broadly conceived scheme for improving the conditions of the people in rural Ireland."

Just one further point. As I have seen it stated before this Commission that no landlord in the West of Ireland ever did anything to improve his property I wish to state that with regard to my estates this is entirely inaccurate.

In giving the foregoing evidence I should perhaps mention that I am doing so merely as a private individual.

B.—Agreement as to the Division of Streamstown Grazing Farm, belonging to Sir Josslyn Gore-Booth.

Agreement made this twentieth day of May, 1902 (one thousand nine hundred and two) between Sir Josslyn A. R. Gore-Booth, Bart., of Lissadell, Sligo, of the one part, and the several persons whose names are signed hereon, on the other part . . . . . Whereas the farm known as Streamstown grazing farm, in the townland of Streamstown and County of Sligo, and containing 153a. 2r. 4p. statute measure, is at present in Sir Josslyn A. R. Gore-Booth's hands as life owner of same, and he being of the opinion that some of his tenants adjoining, or in the vicinity of said farm, have not sufficient land in their present holdings to enable them to support themselves and their families in comfort, wishes to increase the said holdings by giving them such portions of the said farm as he considers right, to be added to said holdings, on a business basis as between himself and said tenants, viz.:—

The basis so agreed on is that Sir Josslyn A. R. Gore-Booth, Bart. (the landlord), is to receive the same Net Income from the whole of the said farm when so divided as he receives at present from grazing.

The land having been valued at a fair rent, and this being insufficient to cover same the landlord hereby agrees to receive from each of the said tenants a fine in cash for the occupation interest or "tenant-right" of said land (fixed in proportion to the quality of the land), this fine being calculated on the basis that if the total amount received in fines were re-invested the interest on same would make up the difference between the present grazing income and the fair rent as above.

The tenants as in schedule herewith having paid cash down as set forth for their fines, hereby agree as follows:—

1. To sign the usual 15 (fifteen) years' agreement for the fair rent as respectively shown in schedule for the additional land.

2. That such additional land is to be added to present holding and both to be considered as one holding at a total rent as shown in Schedule.

3. To sign any agreement on the above basis (if any), that may be required by the Solicitors or other ~~legal~~ advisers of Sir Josslyn A. R. Gore-Booth, Bart., when so required by them.

Signed by the said Sir Josslyn A. R. Gore-Booth, Bart.

(Signed), Josslyn A. R. Gore-Booth.

In the presence of:—

Witness:

(Signed) J. A. Cooper,
Raheily, Co. Sligo, Land Agent.

Signed by the said tenants of Sir Josslyn A. R. Gore-Booth, Bart., in presence of:

(Signed), Edward O'Hara.
,, Peter Marren.
,, John Mullin.

26	8 1 26	5 12 0	—	—	——	A lady of independent means. Land grazed by her nephew.
27	8 3 0	4 18 8	0 2 0	2	Three sons and three daughters.	Family are young.
28	3 1 36	2 7 0	0 2 0	1	One son and seven daughters.	A shopkeeper on Sir J. G. Booth's property, from whom he also holds land. Has four daughters in America. Son is living in England, and was for a short time in the army.
29	4 0 0	3 10 0	0 1 0	1	Three sons and three daughters.	Two sons employed as agricultural labourers, and one at the local salmon fishery. Two daughters at service in Ireland.
30	10 2 22	7 10 0	0 2 0	3	Unmarried, ..	Two sisters and a brother employed as an agricultural labourer living with him. His land is very highly rented.
31	37 1 5	8 10 0	0 2 0	None	Unmarried, ..	Land only partly reclaimed, and much in need of drainage. Bad quality.
32	34 3 26	22 10 0	0 2 0	5	Two sons and three daughters.	One daughter employed as milliner. Rest of family employed on farm.

B.—Statement as to Midleton Tenantry.

The striping, as it is called, of the Rosses, including Cregg, which divided the district into the existing holding, took place about 1860, and against the will of nearly all the tenants. Two men named Barber and Yeats were the chief instruments employed in the operation, Barber taking the lion's share of the work and incurring most of the odium of the transaction. Up to that time the people held in rundale, and were spoken of as one-cow tenants, two-cow tenants, etc., according to their right to graze one, two, or more cows. It was pretended by the stripers that the new holdings would be made out on the principle of giving to each tenant a quantity of land proportionable to his grazing right; but instead of acting on this equitable principle, the managers, if we are able to believe what everyone in the Rosses says, so handled the matter as to help their favourites at the expense of all others. The stripes being arranged, the poor people had to take what they got, and, to add to the evil, while the land they received was less than it ought to be, their rents were enormously increased. Nor was this the only injustice they had to put up with. Before the striping, Bowmore and what is now known as the Green were a common, on which all the tenants had a prescriptive right to pasture cattle free, but they were now tricked out of this; for Barber and Co., professing a desire to serve them by planting bent along the sea to keep off the blowing sand, and pretending they could not do this without receiving possession of the land from the tenants, asked the possession, giving at the same time an assurance that the people would get the grass again at a nominal rent. The simpletons gave what they asked, but found when too late that they were juggled out of their rights, and that the new charges for grazing were up to the full value of the land. The Rosses were purchased in 1867 by the late Mr. William Middleton from the Misses Cooper, the purchase money being £17,500. Under its new owners the place has greatly prospered, about £2,500 having been expended by Mr. Middleton and his family on improvements. The Rosses property comprises 642 acres 2 roods 6 perches, Irish measure, and every foot of it Church land. The details are given in what is called "A map of the Twelve Cartrons of the Upper and Lower Rosses, and Creggiconnell, in the Barony of Carbury, and County of Sligo, being part of the See-lands of Elphin, in lease to Mrs. Cooper."

APPENDIX V.

DOCUMENT put in by REV. JOSEPH MEEHAN, C.C., in connection with the evidence given by him before the Commission.

THE CASE OF COUNTY LEITRIM.

The writer belongs to the county, and has been for the last twelve years living in and surrounded by its congested districts. He has had therefore exceptional opportunities for seeing any work that has been performed by the Board in Leitrim. Owing to this he has been selected by the County Council to give evidence on their behalf.

The terms of reference of the Commission may be taken up in order.

I.

"What areas outside those already scheduled should be treated as congested?"

I am strongly of opinion all Leitrim stands in need of such treatment. The following reasons support that conviction:—

Leitrim is not the smallest but it is absolutely the poorest county in Ireland. Its present (1906) rateable valuation is barely £138,575. The next lowest in point of valuation is Longford, £153,096. But the population of the county just named is 46,581, Leitrim's is 69,343—almost one-half more. In 1841 Leitrim's population was 155,297, *i.e.*, 16,895 more than double its present. Neither Kerry nor Mayo nor Donegal, three counties which may rank with Leitrim in point of congestion, has lost as high as 50 per cent.; this is over 55 per cent.

In 1891, the first year of the Congested Districts Board's existence, Leitrim's population was 78,618, and its rateable valuation £136,603. Consequently, according to the rough and ready mode of selection adopted by the Board, all Leitrim might have been almost bodily scheduled as "congested." How it then stood in reference to the other congested counties (omitting Clare) will be seen from the following table A. How it now compares with them may be seen from Table B, p. 2. It will be there noticed that though this county seems to be increasing in wealth, the appearance is but fictitious, and is due to Leitrim's very great loss of population between 1891 and 1901, —much the heaviest loss from any of the congested counties—coupled with an arbitrary increase of valuation. This drain of population continues in its full force. Leitrim will soon be comparatively a desert and Blue Books will prove it wealthy.

As it is, 38 of its 78 electoral divisions are scheduled as congested, *i.e.*, practically one half of it. The occupiers of the unincluded portions are about equally poor, in some cases poorer. But the electoral divisions were excluded in some cases, as in that of Scramore (Dromahair) and Belhavel (Killarga), because owing to wholesale "clearances" the populations were small; the people live on the mountain outskirts to where they were expelled; in other cases, as in Drumkeeran and Ballinamore, they included little towns and the total valuations were in consequence high; and in other instances, as in Cloonlougher and Lurganboy, because they contained the residences of gentlemen which brought about the same results.

TABLE A.

1891.

County.	Population,	Valuation, 1891.	Valuation per head. 1891.
		£	£ s. d.
Leitrim, ...	78,618	136,603	1 14 0
Mayo, ...	213,034	311,818	1 8 0
Donegal, ...	185,635	296,303	1 11 0
Galway *	197,753	441,851	2 4 0
Kerry, ...	179,136	290,227	1 12 0
Sligo, ...	98,013	212,472	2 3 0
Roscommon, ...	114,397	245,529	2 2 0

Absolutely Leitrim is certainly the poorest county in Ireland. Relatively to population it is, I am persuaded, also the poorest, and bodily stands in need of special treatment. Three other counties—Kerry, Mayo, and Donegal—would at first sight seem to rank as about equally poor if we confine our attention barely to land valuations and computed populations. But each of these possesses many advantages which Leitrim has not. Their lack tells seriously on the whole county. Among the drawbacks Leitrim is labouring under are:—

(A.) It has no fisheries. Every other one of the eight congested counties (Roscommon excepted) has. The actual cash received by Irish fishermen in 1905 amounted to £414,364. Judging by the analogy of previous years the value of the salmon fisheries should be about £550,000 more. Accordingly, total value of fisheries equals, roughly, £1,000,000. Taking into account unrecorded sales, etc., the value to fishermen could not have fallen below £1,250,000.

(*a.*) Taking, for example, one of the four congested counties mentioned—Donegal—the cash paid to the sea fishermen in 1905 totals £79,688 (Particulars). Besides this sum hundreds were earned at the Congested Districts Board's six curing stations, by carting and marketing, etc., so that the total value of the industry to this one county cannot fall far short of £100,000. If one reckons the inland fisheries this should be doubled. Indeed so important is it that according to the "Report of the Sea and Inland Fisheries in Ireland" for 1905—the latest issued—(p. 33), since the salmon and winter herring fishery began in the Rosses district, N. Glenties, there has been no emigration. Mainly to benefit the fishery at this particular point of the Donegal coast the Government constructed a railway—that from Letterkenny to Burtonport—at a cost of £318,270 (of which Donegal contributed £5,000). In 1900-1 in the Rosses, £16,702 was paid to the 1,549 fishermen and £3,536 to the 575 persons engaged in curing. This would imply that a very large part of the population are participating in the benefits of the industry.

(*b.*) Another industry which, in the words of the last Congested Districts Report, "adds appreciably to the means of subsistence" is kelp-burning. Kelp merely dried was sold for £1 10*s.* per ton and burnt kelp at from £3 10*s.* to £4 10*s.* per ton. Many families obtained from £10 to £12 each. Leitrim is practically a non-maritime county, and has neither of these sources of income.

(B.) Within the County of Leitrim there are no public institutions of any kind or description, Workhouses excepted.† The Asylum is in Sligo, the Industrial Schools here and there. There is no high-class school in the county. Of the 9,728 pupils receiving education in 1901 only 13, as the Census shows, were receiving a "superior education," although to be entitled to be so classified all that was wanted was that they were being taught a foreign language.

Summing up the county abstracts and adding to the total a small estimate for the drawback just mentioned, it will be seen that the annual sum sent out of the county for payments, which in almost any county in Ireland would be spent in the county itself, amounts to fully £12,000. Putting to this the annual amount swamped by the Cavan and Leitrim Railway, the total dead loss to the county is about £16,000 (Particulars). This list is by no means exhaustive.

(C.) A further loss is that practically all the "landlords," the owners of house property in the little towns as well as the owners of land, are absentees. Take the town Manorhamilton for example. Basing the matter on the returns in Thom's Directory, of the 87 larger Leitrim landowners seven-eighths are non-resident, and between them take about £100,000 annually out of the county

* Leaving out the "County of the town" of Galway.

† To be absolutely correct I should also except a small "County" Infirmary. Its upkeep costs barely about £400 annually. But it is situated in Carrick in an extreme corner of the county and is therefore no use to three-fourths of it. From the point of view of circulation of money it is insignificant.

APPENDIX V.

(D.) The emigration is the highest of any of the congested counties—11·8 per cent. between 1891 and 1901 (see Table C). The loss in 1905—the latest return available—1·2 per cent., *i.e.*, about 1,000 persons annually.† This represents an annual drain of at least £120,000 in cash, besides its other ill consequences.

Small wonder they emigrate. The wages in Leitrim are on the lowest list of any county in Ireland. Put up your finger and you will get 100 men at 10*s.* or 12*s.* a week. Railway milesmen get 13*s.* There was near me a vacancy lately, and in one day there were sixteen applications.

(E.) We have no industry whatever but agriculture and its undeveloped bye-industries.

Cf. Donegal.—At Adara and Carrick annual value of home-spuns, helped by the Congested Districts Board, is about £7,000 (Ninth Report, p. 41). Shirt-making in the North, carpet-making in Killybegs, lace-making, etc. We have never had a chance.

(F.) The whole economic edifice of Leitrim rests upon the farmer. There are in the county 13,151 farmers. Of their holdings—

3,421 are at or under £4 valuation;
6,188 between that and at or under £10.

Put in another way—

73 per cent. of the farms are at or under £10 valuation;
83 per cent. are at or under £15 valuation.

This implies that about 83 per cent. of the holdings are uneconomic.

(G.) The county is not good for agriculture. The soil is cold, stiff, and retentive. I have seen land drained perfectly and yet water lodged over the very drains for days. Rushes may be seen growing luxuriantly along the roadsides where it is drained as well as could be. Not more than 30 per cent. of the land of the county could be classed as fair; the rest is miserably bad. It is from the millstone grits mainly. Soil of that origin is hard to labour. As it is retentive a man cannot after rain work on it properly for two or three days—he would be making mortar. Of rain we have a superabundance. The land is very hilly. This too both renders it more laborious to work and causes the easier washing away of its fertility into the streams and rivers.

Hence (*a*) cost of producing crop greater than in a lively, loamy soil; (*b*) they are driven to the peaty loams for their crops. These produce bad crops, but it is the best can be done. Hence anything like "intensive culture" is out of the question, and this means of curing congestion must be largely discounted.

We are living on credit, and on the returns from America. Our incomes are microscopic in their smallness.

(*Tables of Incomes of Average Farmers*).

(H.) As to the Workhouses—our sole public institutions—not all of them are situated in the county. Eighteen of our seventy-eight electoral divisions (*i.e.*, almost one-fourth of the county) are included in two Unions. Bawnboy and Ballyshannon, whose headquarters are outside the county—a further drain. Moreover, the Union at Carrick-on-Shannon is astride the Shannon and is as much a Roscommon as a Leitrim institution.

SUMMARY.

Leitrim has at least half-a-dozen special disadvantages:—

(1.) No Fisheries; (2.) No Public Institutions of any kind or description, not even a gaol; (3.) Double or treble the average amount of absenteeism; (4.) A total absence of Industries; (5.) An unusual amount of uneconomic holdings; (6.) Extremely poor soil.

Translating some of these drawbacks into figures which have been shown to be justified:—

		£
(1.)	Annual drain of Public Institutions, .	16,000
(2.)	,, ,, Absenteeism, . .	100,000
(3.)	,, ,, Emigration, . .	120,000
	Total Annual Drain, .	£236,000

These figures suggest and, I submit, establish that the whole county needs special treatment. It is rushing to bankruptcy.

It has a dearth of representative, fully educated men, and a total absence of influential men. Its people are too proud to be clamorous about poverty or to be exposing their sores to the world. Hence they have been long suffering unseen. (Instances).

Had we a poor man's University, such a University, for instance, as Edinburgh or Aberdeen, there would be no lack of thoroughly equipped laymen to act as leaders in thought and action. As it is, Clergymen, Ministers in the North, Catholic Priests in the West and South, are constrained to step outside their exact sphere of duties, and do work in economy and politics for which they cannot be expected to have any special tastes or natural aptitudes. With pleasure they would hand over those burdens to others. With a University, too, another result would follow that brilliant young fellows—I know many of them—would not waste talents that might be of vast benefit to the State as well as to themselves.

II.

"Operation of Acts dealing with congestion in Ireland and the working of the Congested Districts Board"—In Leitrim.

I beg to submit a Table gathered from the last Census returns. Its object is to show how Leitrim stands relatively to the other districts entrusted to the care of the Congested Districts Board.

I also venture to put in evidence a Table which will facilitate a comparison between the non-congested and the congested halves of the county.

From the Reports of the Board and particularly from its last I shall undertake to show that, comparatively to other counties and almost absolutely, this county has been completely ignored and neglected. The little that the Board has done in Leitrim is excellent of its kind—(Particulars). The complaint is that it has been so very little and that as a relief to congestion it is worthless. The accompanying Pamphlet—"Pioneer Lectures"—compiled by the witness will indicate some of its work.

TABLE B.

Congested Areas of	Population, 1891.	Population, 1901.	Loss, per Cent.	Valuation, 1901.	Number of Scheduled Electoral Divisions.
				£	
Leitrim, ..	35,240	30,955	12·1	47,213	38
Cork, ..	38,678	34,555	10·6	47,069	33
Donegal, ..	107,501	104,146	3·2	100,847	89
Galway, ..	72,345	66,491	8·0	67,588	60
Kerry, ..	86,698	80,297	10·4	102,367	77
Mayo, ..	139,903	129,329	7·5	129,964	92
Roscommon	32,758	29,576	9·2	38,481	18
Sligo, ..	31,587	27,415	13·2	40,245	21
	547,710	498,764	8·9	573,774	428

TABLE C.

	Population, 1891.	Population, 1901.	Loss, per Cent.	Valuation,* 1891.	Valuation,* 1901
					£
Congested Leitrim,	35,240	30,955	12·1	46,952	47,213
Non-Congested Leitrim.	43,378	38,388	10·7	89,651	90,770
All Leitrim, ..	78,618	69,343	11·8	136,603	137,983

N.B.—Valuation of Leitrim, 1906, £138,575.

* These valuations, it is to be noted, are solely valuations of land and houses. Neither fisheries nor any other sources of income are taken into account. If, accordingly, this county's valuation works out in this Table at about 26*s.* per head, Sligo's at about 25*s.* 6*d.*, and Donegal's at near 19*s.* this, at first sight, seems to indicate that living is easier in a congested area in Leitrim than in one in the other counties mentioned. It is not the case.

† In 1906 1,005 persons from Leitrim emigrated.

These two tables make clear (*a*) that Leitrim's congested population is going down more rapidly than that of any other county entrusted to the Board*, and that (*b*) it is the scheduled portion of this county that is more rapidly disappearing. In the congested electoral division in which the writer has been living —Killarga—the decrease in the ten years was over 19 per cent., as far as I could make out the highest in Ireland.

This of itself points to the Board's neglect.

The above tables further suggest a principle which in equity should have been, it is submitted, a guiding principle of the Congested Districts Board. 1891 was the year the Board took up work. The ratio of Leitrim's congested population to that of the total area which it was given in charge will be found to be as 1 is to 15·5. Consequently of every £15 10*s.* entrusted to the Board £1 was intended for this county.

Taking scheduled areas as the basis of comparison the total number of congested electoral divisions is 428. Of these, Leitrim has 38.

$$\frac{38}{428} = \frac{1}{11{\cdot}02}$$

Consequently Leitrim was entitled to one-eleventh the entire funds, time, and attention of the Board. For every £10 spent elsewhere there should have been £1 spent in Leitrim. The mere spending of money, it is to be remarked, is of small moment compared to the Board's time, thought, and wise guidance, of which it is the index. Putting these relative claims in a convenient form:—

TABLE D.

	Total for Leitrim.	Total for all Ireland. Leitrim included.
(*a*) Scheduled Congested Districts, ..	38	428
Claims on Funds, Time, and Attention.	£1	£11
(*b*) Population of Congested Districts,	35,240	547,510
Consequent claim on Funds, Time and Attention, ...	£1	£15 10*s.*

The Board's Reports will tell quite a different story. I beg to summarize them.

At the outset, however, one is prompted to think that perhaps the action of the Board is cramped by certain counties having paramount rights to its income. This is not the case. Its principle endowment is £41,250 per annum. This represents the interest at 2¾ per cent. on £1,500,000 of the Irish Church Surplus. The main endowment of a similar Board for Scotland, it may be remarked, is £20,000 a year. But this £20,000 comes directly out of the Imperial Treasury.

Now, as to this Irish Church Surplus, each county has upon it a definite claim. This the Board itself explains (9th Report, pp. 7 and 8). The definite claim on this £41,250 (the annual interest) one can infer from this reference works out so that Leitrim is entitled from it to £2,639 per annum.

As to the other two items of the Fixed Income, the Parliamentary Grant of £25,000 and the Inland Development Grant of £20,000, these are sums entrusted to the Board for the impartial benefit of the half million people throughout Ireland placed under its care.

The only case come across of particular funds† being "earmarked" for particular districts is that of the Irish Reproductive Loan Fund balance of £43,035. This, in 1874, was handed over in trust to the Commissioners of Public Works. Among the particular purposes for which this respectable sum was held in trust "instruction in, and the promotion of agricultural science" in certain Irish counties including Leitrim, is specifically mentioned. In 1891 this balance was passed on to the Congested Districts Board. Will it be credited that Leitrim's claim was denied it and that a county which had no lien on it reaped the main benefits of agricultural instruction and of this trust money? Yet so much can be gathered from the Board's Reports.

TABLE (*a*)—FISHERY SCHEMES (15TH REPORT). APPENDIX

	Expenditure in all Ireland.	Expenditure in Leitrim.
	£ *s.* *d.*	£ *s.* *d.*
(1) Fishery Schemes (p. 53), ..	197,758 1 1	0 0 0
(2) Barrelmaking (p. 54) (Donegal),	16,727 6 7	0 0 0
Instruction in Barrelmaking (p. 54) (Donegal), 1891–'99,	208 12 11	0 0 0
Instruction in Barrelmaking, 1899–1906.	?	0 0 0
(3) Boatbuilding (p. 54)‡, ..	1,099 17 7	0 0 0
Instruction in Boatbuilding 1891–1899 (p. 54).	360 3 9	0 0 0
Instruction in Boatbuilding 1899–1906.	?	0 0 0
(4) Steamer and Steamer Services (p. 55).	61,938 4 4	0 0 0
(5) Marine Works§ (pp. 83–88), ..	66,626 0 0	0 0 0
Total ascertained Expenditure up to 31st March, 1906.	344,718 6 3	0 0 0

This is a large sum. We do not fall into the mistake of assuming there have been from it or from other outlays no refunds. The tables of receipts are there and testify to these returns all along. The steamer, v.g., whose maintenance cost £3,130, paid back to the Board £45 (App. I., p. 36); so of the first four items in this table. But this £344,000 is also an index which cannot be discounted, to the care and guidance of the Board. It seems not unreasonable to hope that on the non-maritime counties there will be bestowed a compensating amount both of attention and of help. We go on to test this.

The fifteen Reports of the Board contain the full record of its work. From the fifteenth or last issued alone shall I quote. Besides detailing by themselves the Board's operations for 1905-6, it sums up all the work done since 1891, 1905-6 included. No later return is yet available to the public.

The Board's great work is migration and enlargement of holdings. The following table will make clear how far it has been carried out in this county.

TABLE (*b*)—MIGRATION, &C.

Claim on Funds, &c.	Total for all Ireland. Leitrim included. 11	Total for Leitrim. 1
(1) Number of Estates purchased by C.D.B. (p. 8).	103	1
(2) Number of Acres purchased (p. 8),	263,175	207
(3) Total amount of purchase money (p. 8).	£1,220,135	£850
(4) Purchases agreed upon, (1905–6), (p. 8).	340,361	0
(5) Improvement of Estates (p. 43),	£480,362	£131
(6) Purchase of Tenants' interests (p. 11) (utilized to relieve congestion).	£57,548	0
(7) Number of Acres purchased from tenants (p. 11).	17,434	0
(8) Compensation intended for tenants in 1906–7 served with notices to quit (p. 12) (vacated farms to be utilized for same purpose).	£38,000	0
(9) Outlay in respect of erection of houses for migrants (p. 13).	£76,719	0
(10) Lung River Drainage, ...	£11,395	0
(11) Number of new, enlarged, and rearranged holdings (p. 117), ..	2192	0

Not only, as we here see, has practically nothing been done for this county under this most important head, but nothing further can be done or attempted. This is an easy inference from published facts. The Board cannot afford for the future to deal with more than £140,000 of property each year (15th Report, p. 9). Now, according to the Estates Commissioners last report (p. xxii.) "Requests" for the purchase of estates (none of which are in Leitrim) have been issued to the Commissioners to the amount of £975,211. Of these, eleven have been purchased

* Sligo's twenty congested districts excepted.
† Donations excepted, *vide* Fifth Report, p. 4. They were, of course, all allocated as had been desired by the donors.
‡ Return of Boats built in Ireland (p. 82) work out at £14,944, besides Instruction.
§ Add to this £6,600 obtained by the Board for Killybegs (Donegal) Pier directly from the Treasury (*vide* 5th Report, p. 25). The Board gave out of its own funds a grant of £3,400 towards this work. Besides this, to make the Railway from Donegal to Killybegs the Government gave a free grant of £115,000.

APPENDIX V.

at a cost of, roughly, £200,000. There remains £775,000 to be dealt with, together with whatever purchases may have been "requested" since. It will take six years to obtain cash to complete these transactions. Nothing more can be done.

As things are at present the Board has but four years longer of existence. Consequently, its possible usefulness to Leitrim on this score is at an end. It practically never began to be useful. The paragraph at the foot of page 10 (last Report) suggests that it is not even anxious to be of use as far as this, its most important work, is concerned.

TABLE (*c*)—AGRICULTURAL SCHEMES.

——	Total Expenditure, 1891–1903.	Expenditure in Leitrim, 1891–1903.
	£ s. d.	
(1) Horses Asses, and Stud Farm (p. 51).	69,215 5 11	One horse always, except in 1903 alone, when there were two, one donkey half of the time, two the remainder (*vide* first twelve Reports—Appendices).
(2) Cattle (p. 51), ..	34,463 1 4	Average of 5 Bulls each year (*vide* 13th Report, p. 9).†
(3) Sheep (p. 51), ..	5,082 11 0	(?)
(4) Swine (p. 52), ..	1,831 14 4	One during nine years; two during three years (*vide* 13th Report, p. 9).
(5) Poultry, Poultry Depot (Donegal) and Fresh Egg Trade (p. 52).	7,522 1 4	Mainly four or five flocks of twenty fowl each, and two or three of ducks for four or five years.
(6) Example Holdings (p. 53).	3,110 0 0	
(7) Agricultural Instruction (p. 52).	5,268 0 0	0 (An Instructor several times refused).
(8) Agricultural Inspection &c. (p. 52).	6,303 0 0	Cost of visiting the horse, the pig, the donkey, and the ducks, &c., once or twice a year
(9) Knockboy Plantation, &c., (p 52).	9,023 0 0	——
(10) Swinford Union Gardening, Planting, and Asparagus Culture* (p. 52).	2,434 0 0	——

These are the main items. In the omitted ones this county's participation is equally insignificant, I may say indeed, ridiculous. Going through the Appendices, from App. VIII. to App. XV. the name of Leitrim almost never occurs. From App. XV. to XX. it actually does not occur even once. The very long App. XVIII. of six pages, for instance, is wholly given up to Donegal; the succeeding one concerns only Mayo and Galway. App. XX. is divided fairly impartially between them. App. XXI. details two special kinds of grants. The first half deals with Marine Works, and we see (p. 88) that a total of £66,626 was bestowed on them out of the Board's funds. Leitrim neither obtained nor, I think, claimed a penny. Naturally it is to be expected that when we go on to Inland Works the Board will make up for its not sharing to the extent of a farthing in any benefit in the Marine Works. Let us see.

TABLE (*d*)—INLAND WORKS (pp. 88-95).

Roads, Bridges, etc. to 31st March, 1906.

——	Number of Congested El. Divisions.	Amount expended.
		£
Donegal, ...	89	27,489
Mayo, ...	92	16,193
Leitrim, ...	38	1,896
Five other Counties, ..	209	21,935
Total expenditure to 31st March, 1906. ..	—	67,513

We thus see that Leitrim again has had hardly a look in. On a single Inland Work, Gweebarra, in the enterprising county of Donegal, there has been spent £8,995, almost five times as much as in the whole of this county. Donegal and Mayo coupled together have appropriated to themselves a good deal more than one half the total large sum voted by the Board for Inland Works. In the case of Marine Works they were a little more generous to the counties equally with them entitled to the Boards' care. Donegal took only £14,500, Mayo but £10,403. Sligo, or rather mainly an Antiquaries' island off the Sligo Coast, got a paltry £635. Kerry and the other maritime counties were, however, allowed subsidies about which they can, looking to this head alone, scarcely reasonably complain. Leitrim is nowhere, nor, let it be understood, does it find fault with this by itself.

But if the two counties which have mainly and almost exclusively benefited by the Board have here shown some consideration for others, doubtless their liberality will be soon rewarded. On July 1st, 1902, Mr. Wyndham introduced a Bill to provide for the construction and improvement of fishing harbours and for assisting the coasting trade, etc. A free grant of £100,000 was set aside, coupled, however, with the "self-help" condition of 1½ per cent. on this amount for four years, or in all £6,000. There is a familiar ring about the proportion in this condition. The amount of money, not speaking of this £100,000, already expended (out of Irish funds) on Irish fishing harbours, is enormous. The amount of assistance given to Leitrim for any purpose whatever is practically zero. It is worse than nothing as will be seen when we come to discuss railway-making (*vide* p. 11).

TABLE (*e*.)—INDUSTRIAL SCHEMES (pp. 53-54)

to 31st March, 1906.

	£
MAYO:	
(1.) Ballaghaderreen Factory, Capitation Grants,	4,116
(2.) Building Grants,	300
(3.) Foxford Factory, Swinford Union,	8,333
(4.) Foxford Mill Race ,, ,,	1,164
(5.) Kiltimagh Industries ,, ,,	467
(6.) Kiltimagh Technical School (1899),	1,604
(7.) Kiltimagh Technical School (1897),	
(8.) Belmullet Weaving Industry, &c., &c.,	91
DONEGAL:	
(9.) Tweed Industry (up to 1899),	818
(10.) Ballyshannon Factory,	127
(11.) Glenbeigh Rug-making,	407
(12.) S. Donegal Industries, Grants,	2,799
(13.) Killybegs and Kilcar Factories,	120
(14.) Killybegs Grant,	800
(15.) Donegal Carpet Factories,	2,129
(16.) Milford Weaving Industry,	240
LEITRIM:	
(17.) Two or three Carpentry Classes, four hours a day, three days a week, six months each,	
GALWAY, &c.	
(18), (19), &c.	
Total expenditure to 31st March, 1906,	£55,986

TABLE (*f*.)—PARISH COMMITTEES' GRANTS.

COUNTY.	Number of Scheduled Electoral Divisions.	Net amount of Grant to 31st March, 1905.	Gross Grant sanctioned for 1905–6.
		£	£
Mayo, ...	92	18,756	3,950
,, ...		Sum previous to 1897—?	
Donegal, ...	89	2,366	1,960
Leitrim, ...	38	729	1,090
Other five Counties, ..	209	7,076	4,265
Total, ..	428	28,930	11,245

* That the Asparagus Culture took place in Swinford I am not certain.

† During four years of the twelve there were six. Average number in Donegal every year—twenty three, in Mayo the same. The disproportion in horses was greater. During the twelve years—1891–1903—seven of the Board's horses were usually placed in Donegal, seven or eight in Mayo, though in 1895 there were as many as eleven, five or six in Galway. As far as I have been able to ascertain no sheep were sent to this county.

III.

"The working . . . of the Land Commission under these Acts" . . . . . in Leitrim.

Up to the close of the compilation of the last published report of the Land Commission 3,855 Leitrim farmers out of its 13,151 would appear to have bought out, owning 82,844 acres out of its gross total of 392,381 acres. Result—a stereotyping of congestion.

The writer's firm conviction is that under present circumstances in the face of the strong and growing foreign competition, backed by genuinely paternal and not mere ruling Govennments three fourths of the Leitrim farmers will be wiped out in the course of twenty or thirty years. Wiped out they would have been long ago but for American aid. Their sons and daughters practically sell themselves to slavery to keep the roofs over their parents' heads. It is they and not the land that paid the bills and paid the rent. And the pity of it is that those excellent young fellows wreck whatever chances they may have of a career or of independence for themselves in their efforts for their parents and younger brothers. The most enterprising go. Many of them succeed beyond the dreams of ambition—in America and Australia. (Instances, Sweeney of Buffalo; O'Connor of Leitrim). The wastrels stop at home. The unfitted survive, and the race declines. If this be so, it can scarcely add to the credit or to the strength of our Government that under a foreign Government alone can the best of us find our opportunities, or make off the means of merely existing in decency. In Leitrim we have had no beneficent landlords. The best we know are at best speculators, and their own agents never saw the face of some of them. We have had some who were as bad as the laws allowed them. Their sole rent-fixing principle was the railway one, "as much as the tenant could bear," all his extraneous sources of income ferreted out by the ubiquitous bailiff. This principle they endeavoured to import into the Land Courts. (Example). We had the landlord who raised the rent when he saw a neat cottage—small wonder we have grown accustomed to dirt. We had scarcely a landlord who did not evict when a man showed becoming independence. The law allowed the confiscation of improvements. Men, like all living things, adapt themselves to their surroundings. Not surprising if there should be a dash of thriftlessness and hopelessness in the generation that is passing away, and that perhaps it is still telling on the present. Small wonder that the standard of domestic comforts is rather low.

The radical mistake about the laws seems to have been that while they suited England, they were utterly unsuited to Ireland. It is so with all British made laws. If they do not suit us so much the worse for us. Protection, all along the line (dual ownership once abolished) would have been our salvation. It would have also been a boon to English agriculturists (*v.* Report of Commission on Agricultural Depression). But it would not commend itself to Englishmen generally. Hence we must put up with things as they are, and try to make the best of them.

The more recent sales have helped to stereotype congestion. They are too high. The first nineteen County Leitrim estates sold under the Act of 1885 were obtained at 16·1 years' purchase. The first five under the 1903 Act at 21 years' purchase. Contrast price of the Board's Leitrim pigmy estate at Kilgariff (the sole Leitrim purchasing it has done), 207 acres (out of 263,175 purchased), at 11½ years' purchase, with the price of the MacTernan Estate, also in a congested district (Garvagh), for which the tenants paid 22½ and 24½ years' purchase. Some years before 1903 the last-mentioned estate was arranged for at 18 years' purchase. The Land Commission came, inspected it, and declined approval. The Armstrong Estate which shares part of one townland with it was considered dear at 16 years' purchase. It is much better land.

Contrast the Townsend Estate, Drumkeeran, sold, I have been informed by the tenants, at 15 years' purchase, with the Johnstone Estate, both coming round the sides of it and of exactly the same quality, at 23 years' purchase. Contrast the price of the Meehan Estate, Glenade, the land of which I well know, at 17 years' purchase with the Weir Estate, Killarga, under the 1903 Act at 25½ years' purchase. The land of the former is a good deal etter. Contrast sale price of Duke of Leinster's Estate around Dublin with sale price of the Clement's Estate about this little town 25·88 and 23·88 years' purchase.

In 90 per cent. of the agreements the year's rent actually due was added to the purchase money. The option of this was a bait the tenants at once jumped at. In many of the cases the option was not given. It was done, but, of course, no one objected. Hence in 90 per cent. of the cases the number of years' purchase should be increased by one, where arrears were due by two or three. The seller's bonus was proportionately inflated. He obtained his 12 per cent. not only on purchase money but on rent due and on arrears as well. I wonder if the framers of the 1903 Act ever contemplated such extra cleverness, or made any provision for such contingencies. Are they really legal?

It is to be noted (*a*) in all cases above given the 12 per cent. bonus is to be added; (*b*) that the above are not specially selected cases, but just the ones the witness knows of himself; (*c*) that by the device of the higher price for the second term judicial rents the benefits of the Fair Rent Courts have been annulled; (*d*) that in the bargaining were on the one side a body of men, helpless as sheep, who understood in a hazy way only the Ashbourne Act; on the other, agents, honourable commercial men perhaps, selected for their astuteness and thoroughly acquainted with every provision of the Land Acts and naturally feeling bound to do either extremely well for their principals, or to retard sale altogether.

Why did the Leitrim tenants agree to exorbitant prices?

Because (*a*) they are all financially hard pressed. The practical remission of the year's rent actually due, coupled with the immediate reduction of four or five shillings in the pound (and for very many of them the equivalent wiping out of arrears) was too strong a temptation. They "cut the gad next the throat" as their own phrase has it. Because (*b*) they have been treated so mercilessly that they felt they were purchasing themselves out of practical slavery. It is not a price for land, it is a price for freedom. Because (*c*) thus alone could they securely buy a chance of progress and of a reward for labour which would correspond with their exertions. Because (*d*) with their outlook not reaching beyond their furthest market towns they are unable to appreciate the fearful competition that is before them in the immediate future. The first grip of it is the very cause that is forcing them on to seek relief. And (*e*) because they still have hope and look forward to the arrival of a truly paternal Government that will run this country not in the almost exclusive interest of England, but of the country itself.

For clearness' sake I beg to put tabularly the contrasts I have just enumerated.

TABLE E.

Act of 1885.	Years.	Act of 1903.	Years.
(1) Nineteen estates (12,810 acres).	16·1 (*a*)	(1) Five estates, direct sales. (*b*)	21
(2) Meehan estate (about 8,000 acres).	17	(2) Weir estate, ..	25½
(3) Townsend estate,	15	(3) Johnston estate, ..	23
(4) Congested Districts Pigmy estate.	11½	(4) M'Ternan estate (after rejection).	21 and 24½
(4) Armstrong estate (Sweetwood).	16		
(5) Congested Districts Board (?) 2nd. (*d*)	9·7	(5) Average of other estates in Congested Districts (on 2nd terms).	23 (nearly) and 25·3 (*c*)
(6) Fox Estate (Dromahair).	18 and 21	(6) Clements (H. J. B.) estate (Manorhamilton).	23·58 and 25·88

N.B. To the right hand column is to be added in 90 per cent. of the Agreements a further year for the rent actually due, and in about 30 per cent. of the cases a still further year's rent for arrears.

(*a*) Land Commission Report, 1906, p. 94.

(*b*) Land Commission Report, 1906, p. 126.

(*c*) Estates Commissioners' last Report.

(*d*) Estates Commissioners' last Report, p. 101.

APPENDIX V.

On this table I beg to make the following remarks:

(A.) To all the estates in the right-hand column the following paragraph in the Report of the Estates Commissioners, p. VII., applies:—

> "The rent is in fact not wholly paid from the produce of the land, but from the wages of labour, or money received from relatives in America or elsewhere. It is open to doubt whether a reduction of 25¼ per cent. on the second term judicial rents fixed for only fifteen years affords the State adequate security for the payment of purchase annuities on this basis for 68½ years. [It will be soon 75 years]. In such cases the land itself does not produce the rent or the annuity, and, although the rent may be well secured for a short period of fifteen years, it is evident that for a long period such as 68½ years, there is no guarantee that the existing conditions will continue. There is no certainty that the assistance from outside sources will continue, and, if the holding comes into the hands of an occupier who does not or is not able to supplement the return from the holding by other means, there can be no security for an annuity which is not produced out of the land itself. The fact that large prices are often obtained for the right to occupy such holdings is not a proper or a safe basis for an estimate of security. These prices are due to local causes or the land hunger which the land legislation of recent years is intended to discount, both in the fixing of fair rents and in estimating the security for purchase advances."

We fail, for instance, to see the security on the ten Leitrim farms congested of an average valuation of £4 10*s.* each tabulated in the Estates Commissioners' Report, as sanctioned at 25·6 years' purchase. Such sales must intensify the difficulty of the problem before the Commission. The very work of the Commission itself will but tie faster the Gordian knot. The more carefully it is executed the more inextricable it becomes. The sole possible means of unloosing it is—compulsion. Compulsory purchase at fair valuation, this alone will cut through it. Bargains already made should be subject to revision.

For the last three Christmases the Money Order Office at Drumkeeran had to stop payment. Despite the greatest foresight and unlimited credit it was broken.

(*"Statist" Articles—Details.*)

(B.) In the probable enough event of the cottiers being unable to meet their instalments to the Government the obligation devolves on the county. The County Council should therefore have been made acquainted with the terms, and granted the power to veto the bargain. *Cf.* Kildare, Longford, Leitrim, (£522 docked).

(C.) As to No. 6 in the table, the largest transaction in this neighbourhood, I wish to give details.

This estate was formerly Lord Leitrim's and surrounds this town. It is the second largest estate in the county—20,250 acres, and comprises 333 holdings. The higher rate of purchase was for "town parks" and first term tenants. The "town" has a population of 871 (last Census). Proximity to it has no special advantage. This is evidenced by the fact that on a particular contract perfected after tender the "town park" farmer is getting a lower price (4⅞*d.* per gallon) for milk than three other farmers living two or three miles off (5½*d.*). The "town parks" were rented at very high figures. They were constituted by the much-talked of Lord Leitrim presenting a document to the owner and commanding him to sign or give up his land. This was about thirty years ago. The increased rent much depended on his whim at the moment, but was always respectable. That "rack" rent was never reduced. That was the "fair" rent on the basis of which the 25·88 years' bargain was made. A moment before signing to purchase the tenant wrote his name on some document or other stating that this was his "fair" rent or purchase rent. Some of the "town parks" are over a mile from the town of Manorhamilton with its 871 inhabitants. Some of them, to my knowledge, are reclaimed bogs, reclaimed by the tenants' industry.

However, perhaps all this is strictly legal. Later it will render congestion more congested.

Again, first term tenants who were entitled to have a second term fixed obtained a reduction of 2*s.* 6*d.* in the pound, and then bought at 25·88 years' purchase. Second term tenants 23·89 years' purchase. Besides this a half year's rent due to the 1st November, 1905, was added to the purchase money in every case. They jumped at this and did not analyse terms. Where there was a year's arrears half a year's rent was added to the purchase, where more a full year's. In the case of one evicted tenant (M'Morrow, of Brackeymore) the supplement was two years' rent. There were a great many non-judicial tenants. In these cases an agreement which may be fairly described, I think, as "bogus" was entered into fixing the "fair" rent at the old rent. The advances made on this "fair" rent were so brought within the zones and inspection shut off.

N.B.—The landlord got besides bonus his 3½ per cent. on the arrears pending the advance.

The same principles were carried out in the Phibbs estate—the purchase money, £5,629, included £171 arrears—and, I presume, on all others. I do not know the Act well enough to say are they in contravention to it. If not the Act seems very comprehensive and very favourable to the seller. If it be, the transactions will go to support my contention for compulsory purchase. In either case the chronic congestion of the county has been confirmed.

(D.) The rent is a small item? Certainly in the eyes of a man with a £500 income. Certainly not to the average Leitrim farmer with his £15 or £16 income (Details). When the little pig or the little calf is sold the baker and the candlestick maker have to be paid their bills out of the proceeds.

There are no butcher's bills. If the little calf sickens and the "cow-doctor" (not a single veterinary surgeon have we residing in the county) fails to diagnose the case and quack him round to health, the old cow has to go, and the little children have to subsist on Indian meal and black tea through the winter and spring till another calf arrives. The neighbours will bring them a drop of milk at set times, for the poor are very good to the very poor. When the calf is growing strong the children begin to know again the taste of milk.

All this is exaggeration? Decidedly not. I know dozens of families to whom the description exactly applies. Their next door neighbour may not know of it—we are a proud people. The priest does. I know intimately a family, *v.g.*, of eight or nine whose most luxurious fare frequently for months and months at a time was potatoes and salt. I often sat down with them and amused myself with the children—most intelligent children. They are now, thank Goodness (little thanks to the Government) able to have occasionally a rasher of bacon. The eldest sons are in America and "doing well." This phrase is a Leitrim synonym for writing often and sandwiching the pages of the letter with a fat money order every time. The first "passage" was sent from beyond. The whole case is typical. The father in all his straits never failed to meet at least calls of honour. His credit was good; his assets his children and their careful bringing up. He would be described as one of the most respectable men in the parish. It is balderdash to talk of "self-help" or lack of initiative in such cases. The essential thing is to keep alive. Speculating and experimenting on new lines might lead up to the disaster of disasters—exposure of poverty or the Workhouse. They can take no chances.

(E.) The difference between 4*s.* in the £ reduction (24½ years' purchase) and 8*s.* (18½ years' purchase) is of little consequence in a £5 holding (the average for County Leitrim)? If the average farm is worth £3 12*s.* 1*d.* it is also worth £4 15*s.* 6*d.* a year?

This is the auctioneer's principle, and on the faith of it many an old cow that was not worth a £5 note found herself to her surprise a canting off at £10 or £12. The subtlety of this Eastern fallacy deceived even old Horace, and he was no fool. And it is in the mouths of men who preach thrift at us and denounce our improvidence!

(F.) The writer is a thorough partisan?

He belongs to no political society, and never did. He never stood on a public platform. He never read a speech or an article on the land question in his life. He deliberately avoided the whole land purchase question until a few weeks ago, having accepted the nomination of the County Council to appear before this Commission, he felt obliged to look into it. He began the study of it by trying to get rid of any possible bias for the tenant, if he had it. He unfor-

tunately knows less about it than any priest with whom he is acquainted. He has given most of the time he could spare in the exceptionally busy interval to finding out the truth.' He has confidence in the accuracy of every statement he has made, but is quite ready to withdraw anything which may be shown to be wrong. For what may be wrong he accepts full personal responsibility, as the County Council has given him no directions. He is convinced, however, he is expressing their opinions.

One thing suggested by the above paragraph your armchair economists seldom or never take into account, and that is accidents. All their theories run smoothly as a new bicycle, with never a hitch. With their lack of capital, the sickening of a cow or the death of a heifer is a disaster that tells on farmers for years. I have seen the tears dropping from a strong man's eyes as he placed a little lap of hay under a dying cow's head. John R., *v.g.*, of ——, Drumkeeran, lost thirteen beasts inside of the last four years. He has now no cattle, and 17*s.* 6*d.* is the highest he can get for the grazing of a two-year-old heifer. With the people hunger is often the cause of their disease. They bear it like heroes. I have been assured by the Resident Dispensary Doctor, and am allowed to make use of it, that of his bills £4 out of every £5 comes from America. The old people in their greatest straits are not neglected by their affectionate children. After a life of misery and hardship they try to provide for them every aid and some little comfort in their declining years. The old grandfather in the corner is the pensioner of the family in America. The heartbreak of it is that he has so often to share his remittances, which would smooth his way to the grave, with his ill-clad and sometimes starving grandchildren.

IV.

"What lands are most conveniently situated for the relief of congestion?"

TABLE F.—LEITRIM LANDS.

		Acres.	Acres.
Class I.,	Under Water,	22,451	43,267
	Roads,	17,891	
	In Plantations (1902),	2 925	
Class II.,	Marsh,	4,005	56,657
	Mountain,	30 423	
	Bog,	22,229	
Class III.,	Under Crops (1906),	79,143	292,457
	Pasture,	213,314	
	Total Area of Leitrim,		392,381

The problem presented is to make out of this a means of decent livelihood for the 13,151 farmers of Leitrim. As already shown 83 per cent. of them are managing to keep body and soul together on uneconomic holdings. Agriculture is our exclusive industry, and the basis of the whole economic edifice.

The acres in Class I. may be passed over, though they in reality contain the possibilities of two or three important sources of income.

(A.) In Class II. much of the "Marsh" could be drained and thereby holdings enlarged. Nothing has, as far as I am aware, been as yet done in this way in Leitrim. It is imperatively needed. By drainage, too, a vast quantity of the best land in the county could be improved. The Bonet, for instance, is a most uncertain river, about fifteen miles in length, running through North Leitrim. Meadow lands are all along its banks. Once every five or six years green crops and hay by the thousand tons are ruined along its course. No amount of foresight can guard against the disaster. An outlay, small in comparison to the damage and risk, the blasting of rock obstruction at Corrigencor bridge, would, it is said, reduce to almost vanishing point the chance of flooding. The first few miles of the Bonet's course is through a scheduled district, Glenaniff.

Again, at Drumkeeran, a river, part of which runs along a congested district, could be improved at no great expense to enormous comparative advantage. The whole lake of Belhavel, the highest water in Ireland, could be dried up by an easy engineering work. The Congested Districts Board cut a way to the sea for a lake, Kincassalagh, near Burtonport, and so drained a considerable area. But that was in Donegal. In Leitrim, from a scheduled district, a request for assistance for a particular drainage scheme was sent to the Board and repeated periodically every six months. The reply was received after a couple of years. The particular officials were overworked elsewhere. (The correspondence). The latest courteous letter on the matter, dated 27th September, 1906, would indicate that the Board will begin to seriously consider the matter some half-a-dozen years after it has ceased to exist.

(B.) The *Mountain Land*, a good portion of it, could be reclaimed. What was done once can be done again. A good deal of actually cultivated mountain land was exactly of the same class forty and fifty years ago. It was brought into cultivation by the farmers who were driven from the valleys. They displaced the moor fowl and turned the "keeb" and heather into grass lands. Sometimes, as at Scramore, the landowner wanted their acres to still further enlarge his extended sheep walks. Sometimes, as at Belhavel, the humble cottage did not fit in with his cultured tastes on landscape gardening. Sometimes, as in the case of Dromahair, the magnificent scenery was in his ideas blotched by the peasants' smokes. So has the valley of which Moore writes become a deserted hollow and now "smiles" as a rabbit warren. Sometimes, as at Glenfarne, the Lord of the Manor wanted their cornfields and their meadow lands to add to his demesne. So he made no more ado about it, but went and took them. They shifted. The thatched cottage in which they were reared and in which they were rearing their children was as much to them as Belhavel House or Glenfarne Hall to the wealthy occupiers, as much as Carton to the Duke of Leinster, or Hatfield House to Lord Salisbury. But it did not matter. They had to go.

As an illustration, about forty years ago, John Travers, one of a score on the Montgomery property, was, with his young wife and a squad of children, thrown out of his home beside Belhavel lake just mentioned. But as a special grace he was given about twenty acres of tussocks and heather on the top of Tullintowel—at a small rent; to be quite exact, 17 acres 1 rood 14 perches Irish, at £2. His previous improvements and those of his forefathers for a dozen generations were, of course, confiscated. He scooped out a new home literally in the bog bank. His wife could not stand it. She died. His cattle died; they could not browse on heather. John raised crops in the peat about him, bringing the lime five miles in donkey panniers, and then carrying it on his back up two miles against the braes to manure it. His sons grew up, as might be expected, strong and hardy drudges. They soon had the land "in heart" and were fools enough to have a clean and an obviously comfortable home. The landlord, the same man, observed it when on a shooting excursion. Next gale day the rent was raised in proportion to the apparent comfort. It was doubled, and became £4. John has survived it all. He is now 75, "hale and hearty," and can appear to-morrow to testify that these are facts. He has bought out and is no longer afraid to speak the truth, nor to wear on Sundays a decent coat on his back His house and farm are now a pleasure to look at, his fields well fenced and well drained. He is ready, he tells me, to give points on the reclamation of grouse runs to anybody that comes along. He has done it, it can be done. Economically? It would seem so.

Of such as John Travers are three-fourths of our Leitrim congested peasants. On the Government which if it be traced to first causes, blighted and ruined their lives and the lives of their children, and, as far as could be done, lowered their character, devolves a special claim to right their wrongs. They are poor, but their poverty is not to be laid at their own door. If a few of them are unthrifty and untidy and their homes cheerless and tasteless small wonder.* (Duties of a Bailiff).

* One of England's most rigorous reasoners, John Stuart Mill, a man noted for not having a particle of sentiment in his composition, wrote many years ago of the Irish cottier, of his cheerless lot and of his deprivation of any incentives to industry in the following strain :—

"If by extra exertion he doubled the produce of his bit of land, or if he prudently abstained from producing mortals to eat it, his only gain would be that he would have more left to pay his landlord. Almost alone among mankind the cottier is in this condition that he can be scarcely better or worse off by any act of his own. A situation more devoid of motives to either labour or self-command imagination itself cannot conceive. The inducements of free human beings are taken away, those of a slave not substituted. He has nothing to hope or nothing to fear except being dispossessed of his holding and against that he protects himself by the *ultima ratio* of defensive civil war."

(Political "Economy," B. II., Chap. 9, p. 187). The words are strong. One cannot well understand the present if he shuts off a view of the past, nor could he apply a remedy to disease in character until he had first made off the cause of it.

(C.) By a better knowledge of agriculture and of modern agricultural methods the produce of the crop lands—Class III.—could be improved and the acreage increased. We have now at last one and only one agricultural instructor in Leitrim who is promising well. We were repeatedly refused one by the Congested Districts Board on reasons which are scarcely sustainable. It was quite consonant with its entire treatment of the county.

The pasturage too is susceptible of some improvement. Intensive crop growing will never pay here. It is almost all spade work, on bad land. By organization and co-operation the farmers could have seeds, manures, farm implements, etc., cheaper and would in a hundred ways, benefit. The combined force of all under this heading would materially ease congestion. But the economic level of Leitrim must be raised before it is a fit subject for co-operation or for the Department's efforts. There is no capital whatever in the county. If every farmer paid his debts three-fourths of them would not have the working clothes to their back and these are in all conscience bad enough. Agricultural banks are doing good work, mainly because they place more money at the disposal of the poorest of the poor. This tides them over their most pressing necessities. But the total amount of capital introduced into the country by these banks is too insignificant. It is a mere blackberry for a starving man.

APPENDIX to C.

Table G.

Potatoes in Leitrim.

Cost of Growing per Statute Acre.

——	Days.	—	Produce.	Value.
(A).		£ s. d.		£ s. d.
Manure, 25 tons, at 3s. per ton.	—	3 15 0	(Mean rate of produce per acre in Ireland for the 10 years 1896–1905, 4·1 tons. Agricultural Statistics, Ireland, 1906, p. 9).	—
Carting, 2 days, at 5s.,	2	0 10 0		—
Scattering, 2 days, at 2s. 6d.	2	0 5 0		—
Digging, 30 days, at 2s. 6d. (good work).	30	3 15 0		—
Seed, 20 cwt., at 3s. 6d. per cwt.	—	3 10 0		—
Cutting seed, 2 days, at 2s.	2	0 4 0		—
Setting or sowing, 3 days, at 2s.	3	0 6 0	—	—
Moulding, 8 days, at 2s.	8	0 16 0	—	—
Weeding, 4 days, at 2s.,	4	0 8 0	—	—
Spraying, twice, ..	2	1 0 0	—	—
(B).				
Digging, 12 days, at 2s. 6d.	12	1 10 0	—	—
Pickers, 6 days, at 1s. 6d.	6	0 9 0	—	—
Carting to market, or home.	2	0 7 6	—	—
Sorting, ...	2	0 5 0	6 tons large, at 45s.	13 10 0
Rates, ...	—	0 3 0	(A too liberal yield for Leitrim).	—
Wear and tear of Machinery.	—	0 5 0	(Department at 40s. per ton).	—
Interest on Capital,	—	0 4 6	30 cwt. small, at 30s.	2 5 0
Repairs to Roads, ..	1	0 2 6	(Department, at 25s. per ton).	—
Fencing, ...	2	0 5 0	Total, 7½ tons.	
Rent (?).				
Total, ..	78	18 0 6	—	15 5 0

Loss per acre, £2 15s 6d.

N.B. (1) Fifty-three days to the acre in putting down crop (48 additional if the Department's advice be followed); 25 days in taking up the crop. Total, 78 days, or 126 days.

Gentlemen flying over the country on motor cars can scarcely appreciate all this labour per acre.

N.B. (2) This is ordinary Leitrim cropping. If all the Department's advice (Leaflet 81) as to manures, lime, new seed, be adopted the cost per acre would go up by £11 0s. 6d., the number of days at putting down the crop by 48. "Elbow grease," as someone, not a poet, said, is certainly the best manure that can go in land. But the spadesman must live on air while working. It could not afford him cold potatoes.

This list has been very carefully compiled. This is our staple Leitrim crop. Last year the acres under it totalled 12,245 out of a total of 14,731 under green crops. To make it pay a farmer's time must be estimated at about 1s. and his wife and children's thrown in gratis. I have seen a child of six regularly working. It used to lead a donkey. The mother at one end filled the little cart with manure, the father at the other end unloaded it. 1s. a day is still better than nothing. But all the experts in Glasnevin cannot under present conditions make potatoes in Leitrim pay a decent living wage. (My own experiences).

Estimate of remaining important Leitrim Crops per Statute Acre, on same basis of labour

——	Cost of Production.	Value of Crop.	Profit.
	£ s. d.	£ s. d.	£ s. d.
Oats, ...	6 0 0	6 15 0	0 15 0
Turnips, ...	8 0 0	9 7 6	1 7 6
Mangels, ...	9 10 0	11 0 0	1 10 0
Meadow Hay, ...	1 17 6	3 0 0	1 0 6
		Total Profit on 4 acres,	4 12 6
		Loss on 1 acre potatoes,	2 15 6
		Nett profit on 5 statute acres.	1 17 0
		Nett profit on one acre (say).	0 7 6
	Income, roughly, from this source on a 20-acre farm. ..		7 10 0

ESTIMATED YIELD OF CROPS IN ABOVE TABLE.

—	——	Value..	De-partment's Price.
Oats, ..	120 stone grain, at .. (Department's average 5 years. No manure).	8d. per stone,	8d. per stone
	26 cwt. straw, at .. (Department's average for 5 years).	£2 per ton,	£2 per ton.
Turnips, ..	18¼ tons, at .. .. (Department's average 5 years, 4 cwts. superphosphate).	10s. per ton,	9s. per ton.
Mangels, ..	18 tons, at .. .. (Department's average 18·5—15 tons farmyard manure).	12s. per ton,	11s. per ton.
Meadow Hay,	30 cwt., at .. .. (Department's average, 5 years, no manure, 29¼ cwt.)	£2 per ton,	£2 per ton.

Carrick-on-Shannon, ...	5,874 2 15	1,499 11 0
Kinlough, ...	5,215 1 25	593 15 0
Mohill, ...	8,564 3 18	1,555 10 0
Manorhamilton, ...	18,479 1 29	1,877 0 0
Total, ...	40,562 1 17	5,950 10 0

TABLE I.

Manorhamilton Rural District.

		Valuation of Land.
	A. R. P.	£ s. d.
Good Land, ...	2,228 3 34	1,181 6 0
Mountain, &c., ...	16,250 1 35	695 14 0

N.B.—This table is based on Ginnell's "Returns of Untenanted Lands" recently published, checked by personal local knowledge. I hand in a specific list of the most uneconomic holdings in nine electoral divisions of the rural district under consideration kindly supplied me by the Rate Collectors.

The enlargement of uneconomic holdings is the manifest first aid to congestion. Migration is indispensable for its application.

The total acreage of untenanted Leitrim lands, 40,562, would obviously be unable to do more than slightly alleviate congestion. Of the existing holdings, 85 per cent. at least are uneconomic, *i.e.*, 10,890, or, say, 11,000 of them. Migration to other counties is perhaps practicable if in colonies. But I am not sure that the Meath or Westmeath farmers would extend to the Leitrim migrants the same hearty welcome that Leitrim men on their part gave their persecuted forefathers and relations some hundred years ago. These latter, I must stop to say, hurled into North Leitrim from Donegal,* Fermanagh, and even from distant Kerry, were among their bravest and best, men who by their persistent bravery in defence of what they believed to be their rights had specially shown themselves incapable of the degradation that was being forced upon them. I am quite certain therefore that the witness who described Connaught as a "dumping ground" either did not intend the slur cast upon them by his use of the phrase or else knows little about history.

As to local migration, there are not in this rural district of Manorhamilton, for instance, good untenanted lands to go round all the "congests." But even the 2,228 acres in Manorhamilton rural district could do much if judiciously utilized. As a rough estimation it can create one hundred good farms. The holdings vacated may relieve possibly fifty of the existing neighbouring ones. About one-eighth of the Manorhamilton unoccupied lands are good (*vide* last Table and appended note). The remaining seven-eighths are mountain and marsh. I am not sure that, as it is, three acres of the side of Benbo—all that taking it rough and smooth could be afforded to each congest—would much benefit anybody.

Let it be clearly understood that I do not advocate confiscation. I do not commend righting wrongs by other wrongs. Personally I accept the situation as it is and I only urge that the best be made of it; that by good statesmanship we be taken out of our present slough and put once for all on a firm economic footing. After that let us do for ourselves. Safeguard us for the future by wise provisions. (The French System). And protect us against any temptation to be degraded. Let there be finality. We want to depend on ourselves and to maintain our traditions for manly independence. But we want first to be given a chance. We have never had it. Whenever we attempted to raise our heads we were knocked down.

Hence, unless in the case of the absolutely destitute, I should not go in for giving house or farm for nothing. The migration plan of the Congested Districts Board is exactly what would suit us. As to enlarging farms by reclamation of adjoining wastes, and even improving existing "slum" farms by similar methods I should subscribe at once to some such suggestion as that put before the Commission by a previous witness, Mr. Talbot-Crosbie. Further, as to all the recommendations submitted in the last few pages I should adopt the same principle.

As a specific instance, a large tract of mountain, Lackagh, in the electoral division of Killarga, within the last few years exchanged ownership. Its extent is 1,096 acres and valuation £14 15*s*. Its new conditions imply a tightening of congestion in an already congested area, because the farmers have no longer facilities for grazing their young stock. It is as reclaimable as was Tullintowel, to which I have referred, etc., etc., and this would be the simplest remedy for the congestion of a scheduled division, the rapidity of whose decline in population can scarcely be matched in Ireland. If taken over by the Congested Districts Board at a fair valuation, or allowing the new owner for his improvements and 10 per cent. profit on his purchase, the coast was clear for easing congestion in one quarter. (Details). If even given as an endowment to a Parish Committee they would make much of it.

In the sale of lands on or adjoining congested districts the Board should have so far the right of pre-emption that no sale would be valid until they would have seen might it be utilized for the easement of congestion and had given it their *fiat*. This should apply to all Leitrim and cover sale of tenants' interests as well as of landlords'.

May I refer to a not very pressing subject the *Preservation* of Game? The question was raised recently in the House of Lords by Lord Massy, the ex-owner of the largest property in Leitrim, 24,751 acres, though nobody in Leitrim ever saw the noble lord's face. The preservation of the game rights to the landlords has its advantages, but whether it is calculated to excite the hostility of the occupiers or not it results at all events in the total destruction of the game. (Why?) We had, for instance, a Coursing Club in Dromahair for years. Our sport grew sad and sadder and finally "petered out." This was one of the few, the very few means of amusement that brighten a sufficiently dead rural life. In the parish a hare is as rare now as in the Artic regions. In my own case a greyhound, whose advent was watched for years before it was born, had to be given away to a sportsman seventeen miles off. Beating through the parish for the one hare that was "hurded" for me (so I was told), was as profitless as searching for Nansen's white one round the North Pole. My thoroughbred in his new quarters did not live to win the Waterloo Cup. He was so thunderstruck at the sight of a hare that he killed himself outright in the first race. Now, according to the Report of the Irish Game Society just issued, £23,000 annually for game and gun licences is carried out of the country by the Inland Revenue. If agricultural societies working in a parish owned these rights they would become of value and in a short time prove a source of income. So too would congestion become a little more tolerable.

I should not advocate their recognition as national assets, but as local or district assets. The smaller the area to which they would belong the better. So would a proper public spirit be more rapidly developed. But they should be under the control and direction of a central authority. The same would apply to fishing rights.

V.

"What changes in law or administration are needed for dealing with the problem of congestion as a whole?"

I beg to put before you part of a resolution passed unanimously at a meeting of the Leitrim County Council held on 19th May, 1905:—

> Resolved—"That we, the County Council of Leitrim, beg to remind the Congested Districts Board, that for so far they totally ignored the

* The O'Donnells, Gallaghers, and Sweeneys, *e.g.*

APPENDIX V.

claims of Leitrim, and, with the exception of a few paltry hundred pounds to make some roads, they have never given the County Leitrim (although one of the poorest counties under their charge) any thing like its proper share of that support that they as a public board were supposed to give the congested areas of Leitrim when entrusted to their care."

At a meeting held in Tralee on June 4th, 1903, the Very Rev. Canon O'Leary, P.P., V.F., in the chair, and Messrs. O'Donnell, M.P., and Flavin, M.P., among the speakers, a resolution equally strong dealing with Kerry was passed.

On the 22nd March, 1901, amongst many other times, prompted by the belief of the neglect of particular districts, a question was asked in the House of Commons by Captain Donelan, and a reply, which might mean anything, was made by the Attorney-General.

On March 14th, 1902, Mr. Lundon moved in the House of Commons—

> "That, in the opinion of this House, the beneficial working of The Irish Congested Districts Board is marred by the slowness and partial character of its operations, by its entire failure to extend any benefits to many districts scheduled as congested, &c."

The resolution was seconded by Mr. T. P. O'Connor and carried against the Government by 94 to 148 votes.

Influenced by these expressions of opinion and by personal knowledge, I regret to say the people of Leitrim are dissatisfied with the Board.

The modifications I should advocate are the three in the Bill introduced into the House of Commons in March, 1901. They are (A) Compulsory Purchase, (B) Extension of Congested Areas, and (C) Reconstruction of the Congested Districts Board.

As to A.:—

(1.) As far back as 1894 or 1895 the Board itself passed a resolution in favour of compulsion.

The fourth Report—that for 1894-1895—contains it. (p. 10). It bears the signatures of Mr. Gerald Balfour, Sir David Harrel, Mr. Charles Kennedy, the Most Rev. Dr. O'Donnell, Mr. Frederick W. Pim, Sir Horace Plunkett, Mr. James H. Tuke, Mr. Frederick Wrench, Mr. A. J. Balfour, Rev. W. S. Green, and Rev. Denis O'Hara:—

> "That the Congested Districts Board is in possession of information through their Inspectors that there are large tracts of land that could be used to enlarge the holdings of small occupiers and promote schemes of emigration in congested districts. The Board are, however, of opinion that it will be impossible for them to give effect to this important department of their work unless more funds are placed at their disposal, and compulsory powers given to them to acquire such lands at their just value."

(2.) The following is an extract from the Board's eleventh Report (p. 16):—

> "We purchased the Leonard estate in the Land Judges' Court in July, 1896, for £5,340, a sum at least £2,000 in excess of the valuation made by our Chief Land Inspector. We were led to give this high price by our desire to assist a body of sixty very poor tenants, whose unfortunate position could never afterwards be effectually ameliorated if we had lost this opportunity of acquiring the land available for the enlargement of their holdings."

Here a sum of 37½ per cent. in excess of the estimated fair price was paid for the estate.

(3.) There is a hunger, a famine for land, *i.e.*, there is a hunger for the sole means of living on in the country. Land has gone up enormously in price. If in a famine a miser so raised the price of his goods he would be considered unjust. "The common opinion declares," states a high authority, "that it is against justice for a monopolist to sell at a price above what could be got if the monopoly did not exist."

(4.) The exposure of the need for land by the Commission will prompt its further appreciation. Confiscation is not advocated, but neither is the confiscation of all hope of the possibility to live in decency in the country. "If," said Jefferson, the author of American independence, "there are in any country uncultivated lands and unemployed poor, it is clear the laws of property have been so far extended as to violate natural rights."

As to B.:—

Everything I have said goes to show that the whole of Leitrim should be so scheduled. The outside areas are often the worst. You come to examine why they are not scheduled and you often find, as in Scramore (Dromahair) that the emptiness of population in the low, comparatively good lands is the very reason why those evicted from them and driven to the bogs and morasses on the outskirts of the same electoral division, to where gutter-snipe would not live, are now debarred from any of the little privileges supposed to be conferred by the Board.

As to all Connaught being scheduled, there is nothing to be said against it. But our experience with the present philanthropic Board would lead us to exact that if this be done provision shall be made that Leitrim be not again neglected. The same causes would be again in operation. We have no strong men, not over-many representative educated men. Leitrim would be swallowed up and ignored. A definite amount of the time, attention, and funds of the Board and of the care of its officials should be set aside for this county. We do not desire again the free hand in even philanthropic work. We want a definite amount on the basis of the number of scheduled areas or of our congested population and their unexploited needs.

As to C.:—

We advocate a reconstruction of the Board on the lines suggested in the House of Commons. It is now a purely nominated Board.

It is a just but an impracticable proposition to urge that restitution should be made now by the present Board for the share of its funds that were our due but were denied us and have been expended elsewhere. It is equally impracticable to ask that at the end of its twenty years of life (sixteen of which have already gone by) restitution should be made us for the more important matter of care and thoughtful guidance which, in the opinion of Mr. T. W. Russell, speaking in the House of Commons on March 13th, 1901, had brought about in one of the congested counties on which its care had been lavished a most remarkable change. The *personnel* of the Board, and the fact that it was trying hard in the face of immense difficulties to do good work—elsewhere—have shielded it from criticism. What it did was all right. What the Department of Agriculture did was all wrong, though it might be the self-same thing.

As an example, the Board's fishery instructors along one coast were exclusively Scotch, and there were forty-two of them. Irishmen were to be had; they were all Irish along another congested coast.* Had this been done by the Department I would say (if you don't mind mixed metaphors) that it would have been a peg for a fierce tornado, and all the Dublin big guns would have kept bombarding the unlucky Department with trissyllables and polysyllables ever since. No doubt it was justifiable.

* "The Instructors in the Donegal boats are all Scotch," p. 23, Fifteenth Report. "There were thirty-nine of them in the summer, and forty-two in the winter." Irish western boats were at the same time under the charge of Arklow and Cork men. Englishmen and Scotch men are now reaping all the big profits of Board's initial work. The Board has not extended the fishery scheme to Kerry and Cork.

The Board is not popular in Leitrim; it is unknown, or was at least unknown until the advent of the Parish Committees two or three years ago. On elsewhere it has focussed its attention with an odd stray beam escaping to us. Still we don't want to get rid of it and substitute for it another. The man a body knows (even though only through the public press) may be quite as good as the man a body does not know at all. The Estates Commissioners are an unknown quantity. In dealing with the people I should fear they would have about them too much cut-and-dry officialism. It never succeeds with Irish peasants.

If the Board in its sixteen years of labour has not yet accomplished removing congestion from the counties it has patronized, it is doubtful if it ever can. Leitrim for it is virgin soil and its peasants the self-dependent material out of which could be created as prosperous and happy a people as would be in Ireland. In the four years of the Board's life remaining to it, it could not possibly make up the leeway of its neglect. Placing now at the eleventh hour a representative on the Board, as suggested in the 1901 Bill thrown out by Mr. Wyndham and his colleagues, would be worthless. No new hand could possibly master fully the details of work for years. He would be all through a mere child among grown men. He would just be in at the death.

In 1911, by the Act of Parliament creating it, the Board's day will be spent. If Parliament will not give it time to redeem itself then I should advise County Leitrim to have nothing further to do with it, and to moreover bow its few existing petty schemes out of the county. Let it spend the penny where it has been spending the pounds and let this county not have the name, as it has had little of the advantages, of having been entrusted to it.

If the Board is to be continued after 1911, but remain constituted as it is, the same course would seem advisable. Leitrim would lose but little, if anything. Even with philanthropists charity begins at home. No man can do more than his very best. And so full of work at their own doors are the members of the Board that Leitrim without a friend and without an influential individual in its whole stretch cannot expect to be favoured with more than a thought.

The Board reconstructed as outlined by the Irish party, but with strict injunctions to make amends for past neglect and definite instructions laid down would meet with our approval.

VI.

"What changes are needed . . . . . for bettering the condition of the people inhabiting congested areas?"

The great need of County Leitrim is the establishment of some industries to supplement our poor and precarious returns from the one existing industry, agriculture. In North Leitrim generally (*a*) the bye-industries of agriculture; in Glenade and Balnagleragh (*b*) tweed making; in Creevelea (*c*) peat making on the very latest lines; in Drumkeeran (*d*) pottery making; in both the last two places mentioned (*e*) iron making and (*f*) coal mining are industries well in view. All of them have been attempted and with some success. But at the present time without better transit facilities these last four must ever remain doomed to failure. To urging the removal of the sole obstacle to their coming into being, viz., bad transport, the remaining paragraphs will be devoted.

A crying need for the Lough Allen quarter of Leitrim is the construction of a railway, the short connecting link of sixteen miles between Arigna and Dromahair. This line would benefit twelve scheduled districts in the parliamentary division of North Leitrim and two in County Roscommon. The special reason for its construction is that, though extremely poor, the intervening area, one "scraw" of congested districts, is teeming with mineral wealth. This line and no other will not only give a chance to the re-opening of all the mines, but insure, I am convinced, their immediate development. The proofs of an article to appear in the May issue of the *New Ireland Review* may save you the trouble of listening to a long pleading on this point. These proofs I beg to hand in.

I should like to recall to you that Mr. James Hacke Tuke, one of the original members of the Congested Districts Board and a philanthropist who thoroughly understood congestion, relied for the improvement of congested districts upon the extension of railways and other means of communication, and upon turning to account the natural resources of each county. This, his opinion, is quoted with approval in the Board's Fifth Report (page 27). Mr. Tuke unfortunately died in 1895.

The construction of railways is one of the best means that has been adopted by the Government for the betterment of congested counties. On Donegal, v.g., it has within recent years expended in free grants as much as £619,097, to which one can certify, and about £200,000 more, the particulars of which have not yet appeared in any Blue Book, and consequently are still beyond reach. (Particulars). On Mayo, £234,000; on Galway, £135,000; on County Down, £115,000.

Compare this with Leitrim's treatment.

Leitrim is the worst laid out county in Ireland, and the worst supplied with railways. From such railways as it has it has very badly suffered. Each of these statements will stand the closest scrutiny.

The Sligo and Leitrim Railway runs across the north of it; the Cavan and Leitrim joins up the south with Belfast about one hundred miles away. These are its railways; no others touch it except the Midland Great Western at the extreme south western corner, Dromod.

As to the Sligo and Leitrim, with which we in this rural district are more immediately concerned, it was constructed without any Government assistance whatever. In 1883 the "Tramways and Public Companies' Act" was passed, authorizing the Treasury to encourage by a free grant as well as by a loan precisely such undertakings. But the line had just been finished (1882). In 1889 "The Light Railways Act" was passed, again seven years too late. The merchants, landowners, and leaseholders of North Leitrim had, ten years before this, taxed themselves to the uttermost of their means for the construction of this line. North Leitrim's valuation is but £53,188, and from its opening for twenty-three years about £2,300 a year was being paid by this line's guarantors, thirty out of the forty-six of whom either lived in North Leitrim or had exclusively North Leitrim interests. In all £65,000 has been paid towards it.

North Leitrim has done quite enough.

South Leitrim too has but one railway and with it it has been equally unfortunate. Its disasters are traceable to the railway experimenting of the Government and to the Government's neglect to make proper investigation before such experimenting.

Proofs of the statement in the last sentence may be found in the Second Report of the Royal Commission on Irish Public Works (issued January, 1888). (Allport's). It condemns Light Railways (page 34) on many grounds. On page 30 it states:—

> "We now come to a matter for which the main responsibility must rest not with the framers of the Act (1883) but with the Executive Government at the time immediately before it became law. Upon the passing of the Act of 1883 a printed statement was issued by order of the Lord Lieutenant specifying the gauge of three feet as that upon which lines which would be allowed the benefit of the Act should, as a rule, be constructed, and announcing that schemes on the broad or normal Irish gauge

APPENDIX V.

> of five feet three inches would only be admitted on the condition 'that no guarantee should be asked for upon so much of the expenditure as is rendered necessary by reason of the departure from the three feet gauge' . . . . . We regret, however, to have to say that it is our deliberate opinion that this encouragement to the introduction at various points throughout Ireland, of a gauge different from the standard gauge of the country was a serious error, and that great evils have resulted from it. In this view we are supported by the practically unanimous opinion of those connected with existing railway companies, both British and Irish."

Robertson's Report on Indian Railways confirms this.

Aliport's Commission also finds fault with a higher responsibility having been placed on a district than 6*d.* in the pound. In South Leitrim it has touched two shillings in the pound and two shillings and two pence. The guaranteeing area includes nine congested districts, viz., Aghavas, Breandrum, Cattare, Cloone, Corriga, Cashel, Castlefore, Keeldra, and Rowan. The rateable valuation of the Leitrim guaranteeing area has recently risen somehow to £64,077—it was £63,731 in 1901—and the guaranteed capital for which Leitrim is responsible is now £146,260—it used to be 143,160. For 1903-1904 the net total charge on South Leitrim in respect of dividend and working expenses was £2,951, *i.e.*, 11*d.* in the pound. The previous financial year it was £3,588, which works out at 1*s.* 1*d.* in the pound. The last record in the seventy-fourth report of the Commissioners of Public Works is among recent ones the worst. The expenditure exceeded the gross receipts for the first half year by £137. The tax should have touched about 1*s.* 5*d.* in the pound.

All this goes to show why we in Leitrim are poor, why we are disheartened, and why we are dissatisfied with the powers that be.

A striking instance of the ignoring of County Leitrim and its claims is brought out by the Railway Act of 1896. This Act authorized the Treasury to aid the construction of Railways

> "which were necessary for the development of a district and which could not be provided without State assistance. In the case of a railway mainly or wholly through a congested district the aid might cover entire cost" (Seventy-first report Public Works, page 14).

Of the half million voted £318,860 was spent on the Letterkenny and Burtonport Railway, and £98,527 on the Buncrana and Carndonagh line, all in Donegal. Donegal contributed in each instance but £5,000. Congested Leitrim was importunate enough, but it got not a brass farthing. It all went somehow to the one county. Small wonder Leitrim has to face the prospect of continuing for very many years to be the poorest county in Ireland. We are discontent. But our discontent is not based upon sentiment, but on the pretty solid foundations of serious neglect, great material want and continuous material ruin. In this parish during the last twelve years I have seen scores of houses sinking to decay; I have seen but one or two erected. This is a sample of what is taking place all over the county. It is to be hoped that the Government will not stand idly by, but that, while yet it may, it will exert itself to make up for neglect and to undo accumulated past wrongs.

APPENDIX VIII.

APPENDIX VIII.

DOCUMENT put in by the Rev. PATRICK DOLAN, in connection with the evidence given by him before the Commission.

A.—OUTLINES OF EVIDENCE.

I have been nominated by the Right Rev. Dr. Hoare, Lord Bishop of Ardagh and Clonmacnoise, to give evidence before the Commission on behalf of the parishes of Aughavas, Mohill, and Cloone, portions of which form part of the congested districts. To the views and suggestions of improvements, which I present to the Commission, I may say I have the complete agreement of the parish priests of Mohill and Cloone. I myself am the Parish Priest of Aughavas.

Drainage. I propose to draw the attention of the Commission in the first place to the question of drainage, a most important thing, in the County Leitrim. In the Aughavas electoral division, sometimes in the summer and autumn after heavy rainfalls the country is flooded. Meadows, newly made hay, and other crops are completely destroyed. Even in the spring-time work is greatly retarded. As late as last 16th March the fields were little lakes. The floods on these occasions even cross the public road, and hinder the people from going to church or on their business unless they wade through or go a long way round. These floods arise from the overflowing of various streams that finally empty themselves into what is called the Black or Cloone River. Here is the statement of one of the parties aggrieved. It is a sample of the rest, who number about seventy-five. He states "That the greater part of his meadow land together with six acres of his pasture land adjoins one of these streams, and that they are injuriously affected by its floods. The aforesaid meadows produce twenty-five cocks of hay annually. The floods drive in sand and coarse gravel, which injure the hay to such an extent that frequently five or six beasts die some years, and he must sell the remainder of his stock. The pasture land is covered with water so that cattle cannot be turned out to feed on it, and also the sand is driven in on it so that the cattle cannot feed on it. He estimates his losses occasionally at about £20 a year." This man's valuation is a little over £20 a year.

Attempts were made to remedy this state of affairs, but to no purpose. The landlords did not trouble. A resolution passed by the Mohill Board of Guardians in February, 1902, was sent to the Lord Lieutenant, asking that some steps should be taken to improve the drainage referred to. Nothing came of it.

At a meeting of the Aughavas Congested Districts Board Committee, held 24th September, 1905, a deputation was appointed to call on the Congested Districts Board in Dublin, to get help to carry out the necessary drainage. The deputation was well received, and various inquiries were made. A grant of £100 was asked, the Parish Committee undertaking to carry out the work at their own expense. A copy of a report, survey, and a statement of the probable expense, made out by the Assistant County Surveyor, were sent to the Board. The estimate amounted to £267 10*s.* 6*d.* The surveyor's report (copy) is appended.

The Congested Districts Board on 21st November, 1905, wrote that:—"They agreed to contribute one half of the grant of the drainage, provided that such contribution does not exceed £135; that a local Committee be formed to obtain all necessary consents, and indemnifies the Board against all consequential damages, undertakes to do the work to the satisfaction of the Board's engineer, etc., full names and addresses of members of Committee to be supplied."

On 27th November, 1905, the parties affected by the drainage formed themselves into a local Committee, agreed to and executed an agreement binding themselves to indemnify the Board against consequential and other damages arising from the operations, as required by the Board's stipulation. In answer to the local Committee Secretary's petition for the consents of the landlords whose properties adjoin the Black River's tributaries, the said landlords gave freely their consents, except John Madden, Esq., D.L., Hilton Park, Clones, County Monaghan, who stated on two occasions that negotiations for the sale of his Leitrim estate were proceeding, and that when the sale was completed, the consents of his tenants would suffice without any reference to him. Some of his tenants refused to sign for the purchase, as he refused to give his consent to the drainage. Though the estate is now sold, these refuse still to sign or agree to the purchase terms, as they think he treated the Committee badly, not to give his consent to the carrying out of a work which would remove a great grievance. It seems as if he used his consent as a lever to raise the purchase price of his land, though he was told it was a free grant of £135, and that the local Committee agreed to indemnify him against all losses from the work. Even if he did not sell his property his estate would be the gainer by this drainage.

Anxious to go on with the work, the local Committee wrote that they were prepared to go on even with the risk of damages to Mr. Madden. On 20th February, 1906, the Board wrote that "They are not prepared to take any further action in the matter of the Aughavas drainage until the local Committee are in a position to state that all necessary consents for the execution of the work have been obtained." Finally on 26th February, 1906, they wrote:—"As there is a Royal Commission sitting inquiring into the laws relating to the drainage of land, it may be no loss of time if the local Committee await the result of their inquiry."

The Congested Districts Board began and continued well but ended badly. The Drainage Commission has issued its report, but I saw from a statement in Parliament that there is no hope for a long time of any action being taken on their report. Like other reports it may be the last heard of it. In the meantime the people suffer. I appeal to the Board, through this Commission, not to be awaiting Parliamentary action, but to complete the good work they encouraged so long. They are not lazy people, or people unwilling to help themselves, who undertake to carry out half of so important a work at their own expense.

In the parish of Mohill a great deal of damage is done to crops of every kind owing to overflooding caused by a river flowing between the Cavan and Gorvagh districts. Local representatives, having a better knowledge of this district, will refer to it more in detail.

In the parish of Cloone a stream about a quarter of a mile long, flowing through the townlands of Lisduff, Killaveaghy, and Drumlegga, causes great injury.

The attention of the Board is directed to something being done in these cases. The people affected will be too willing to co-operate. The sooner it is done the better, as every year brings its losses to a greater or less extent.

Roads. The people suffer greatly from want of good road accommodation to their houses. It would be impossible to describe the hardships and loss they sustain from this cause. Their houses are situated on the sides of long lanes or boreens. Some are even on old passes branching off these lanes. The priest and doctor encounter great risks when called out on duty to these places. No repairs, or very trifling ones, are executed. They are long and expensive for private enterprise, so that no proper repairs take place. As they are too narrow and lead, as it is said, nowhere—*cul-de-sac*—the District Council cannot touch them. These lanes were, years ago, the public passes of the country. None, or hardly any of the gentry, who formed the old grand juries, resided in these districts, and the opening up of new roads was consequently neglected. When something was done it was with a view to connect town with town, and not to bring the people near the main road. The consequence is the people are doomed to remain in this wretched state till some plan is devised to meet the difficulty. It is true the Congested Districts Board gives some help to do some improvement on these lanes and passes, but it is almost

worthless except for repairing very short lengths. It allows only one-sixth of the possible expense. If you have a lane a quarter of a mile long and only a few living on its sides, what use is such a proportion? The consequence is, as I know, as Chairman of our Parish Committee, that the concession is not availed of; and where it has been, it is the result of great persuasion; and often the work was thrown up, it became so expensive. Some better means should be employed to benefit these people. They pay rates, and reasonably expect some help to meet such difficulties. In these cases the Board should make their proportion more elastic. They should give one-third, or, in some cases, one-half of the expense, or the District Council should be empowered to get such work done, especially when many reside on the sides of these lanes. I may add, even the public roads in these districts are not any great credit, if not a positive disgrace, to the authorities who are in charge of them.

An example of bad road accommodation has been brought under my notice by the Parish Priest of Cloone with a view to placing it before the Congested Districts Board through the Commission. This road leads from Cloone to Carrigallen, with a branch from Drumlohan National School to Gubb's cross-roads. It has three very steep hills, probably a gradient of one in five, and is more than a mile long. Over a hundred families live along it. They have the greatest difficulty in getting to the main roads, and only half loads can be carried. Its improvement is too big a work for the County Council, as it is only a bye-road. If the Congested Districts Board gave assistance to the Council a great deal would be done to effect an improvement.

Parish Committees.

The rules framed for Parish Committees do not suit all districts equally well. The works contemplated by the Board are supposed to be carried out in winter-time or thereabouts, owing to the people then having more leisure. But unfortunately this part of the country is very wet from want of drainage. The passes, as alluded to elsewhere, are wretched, and so hilly that even in the best weather it is difficult for a beast to pull its load. Material for building is scarce, and often has to be brought a long distance, so that leisure is greatly counterbalanced by natural difficulties. The proportion—one-fifth—given by the Board is nearly useless in such circumstances. It might do well in other localities, but not here. Our Committee is now three years in existence, but if some changes in the rules are not made I fear it will not survive another year. It required my greatest efforts as Chairman of our Parish Committee to keep it working so long. Some felt greatly the burdens it placed on them. It got a fair chance of success. I have met a girl of fourteen years leading a donkey loaded with big stones from a quarry distant three miles, where her only brother raised them, and the load was taken down by her father, an old infirm man, and his equally helpless wife. They got only one-fifth of the total amount to put up a cattle shed. What I suggest is that in these difficulties a proportion of one-third at least should be granted, and a whole year for the execution of the work. I suggest further that the valuation of under £7 be extended to £10 inclusive. Farmers of £10 valuation are as much in need of help as those of £7. If these changes were made much greater good would be done by Parish Committees.

Technical Instruction.

The County Agricultural and Technical Committee has not been a success in this part of Leitrim. One lecture on poultry, and one on cattle, and a course of dairy instruction in two schools are all that was attempted in my parish. I regret to say there is a great prejudice against such instruction. The farmers think they know everything themselves, and that what they don't know is not worth knowing. There is plenty of occasion for an instructress in domestic economy. Such instruction should not be given in classes. The teacher should go into the houses and show how things are to be done. Notice of her coming to a parish should be sufficient. She should pay visits to the houses at time of meals, show how their materials for cookinig could be used to best advantage, how to clean up a house, and suggest the best methods of making their homes pleasing and comfortable. Classes of manual instruction for boys would be a great advantage.

Though a member of the Technical Committee I am not able to attend its meetings in Carrick-on-Shannon, as the distance—eighteen miles—is too great. Still I try, by frequent conversation, to persuade the people of the advantages of agricultural and technical education, but all in vain. The answer is:—"It is nothing but piling on more rates." The tax levied for the Cavan and Leitrim Light Railway has completely warped their minds against any improvement paid for by taxation.

Emigration.

There is constant emigration. The boys and girls leave very young—from sixteen upwards. They do very well in America, many of them returning within ten years having earned sufficient money to purchase farms or marry comfortably. Their success is drawing away many others. Their fathers cry out about a scarcity of labourers, and yet they let them go. There is no tillage except what supplies the wants of the house. Most of the holdings are small. I am inclined to think some would volunteer to take a place in a scheme of migration. This steady emigration has a most serious effect on Primary education in this county. It is destroying the school attendance. The young people, as a rule, emigrate in April. This month is the busy time of spring operations, being so late from the wet nature of the land. The school-children are now kept at home to meet the pressure of work. Even those from five to seven years are kept to mind the house, or the still younger children to set free, the mother to give a helping hand. The manure has to be carted out, the potatoes planted, the oats sown; then comes the turf-cutting and turf-rearing; then the new hay, harvest, and bringing home of turf; so that for half a year, there is a wretched school attendance, the school averages during these quarters, calling for the Board of Education to warn managers about the probable loss of teachers' salaries. The consequence is that the County Leitrim has the unenviable notoriety of being one of the worst for school attendance in Ireland. The Bishop of this diocese, the Right Rev. Dr. Hoare, had to refer to this state of things in his last Lenten Pastoral. Here are his words: "Besides guarding religious teaching, there is one thing more we must do in the interest of our children, we must send them to school. What is the use of having the school if you refuse to avail of it? What is the state of things I learn from the Blue Book? That the worst rural districts in all Ireland in this respect are Mayo, Sligo, Leitrim, and Longford. Here we have, at least up to the present, a practically satisfactory system of Primary education, and the people, through their own fault, won't educate their children. Let us try and understand the character we deserve by such conduct. The percentage of average daily attendance at school in rural Leitrim—and there are no urban districts in the county—to the average on rolls is 59·6. And the percentage of average daily attendance at school in the rural districts of Longford—that is, leaving out the towns of Longford and Granard—to the average number on rolls is 59·8, or in other words, out of every hundred children in Leitrim forty-one are not educated; and out of every 100 children in rural Longford, about the same number, forty-one are not educated. This is a shame and a disgrace, and calls for an immediate remedy. Take another test. You are aware that in 1892, a law was passed requiring all children over six years and under fourteen, to attend school seventy-five days in each half-year, or 150 days during the year. The Councils got power under pains and penalties to enforce these attendances. Tried by this test, how many of our children are educated? The answer is very humiliating. In Longford 37 per cent.; in Leitrim, 38. That is to say, in Longford sixty-three out of every 100; and in Leitrim sixty-two out of every 100 are not educated.

School Attendance.

With all our excuses of poverty and stress of weather, and bad clothing and bad food, and every other reason that can be alleged, this is a state of things that must be remedied. It is very much better that we should cure ourselves, and form the conviction that it is scandalous, than that we should wait for the rod of coercion. It is a state of things that is appalling; and I now appeal to priests and people, for the love of their religion, and country, to educate the children by sending them to school."

Evicted.

There are some evicted tenants, but they are all likely to be restored. There is one peculiar case. The tenant was evicted in the old Land League days. A hovel was put up on a kind neighbour's holding, adjoining the evicted farm, to shelter the evicted family. There it resides still. The bailiff works the farm.

APPENDIX VIII.

After the passing of the Land Act, 1903, the tenants on the estate, of which I am one, agreed to give the landlord the terms of purchase, viz., twenty-four and a half years' purchase of second term rents, and thirty-one and a half of first term, which he himself demanded, but on the condition that this one family should be restored. Otherwise they would not have given so much. He absolutely refused. His tenants still hold out. This landlord ornaments the House of Lords. There is need here of compulsion.

Extension of Congested Area.

The whole of the parishes of Aughavas, Mohill, and Cloone should be scheduled in the congested districts. The same circumstances exist throughout. There is no reason why the remainder should be deprived of any advantages that are to be had. This is the unanimous wish of all parties concerned.

Farmers' Residences

The labourers are now being provided with decent and sanitary dwellings. But what of the farmers' own dwellings? No wonder they talk of the fine slated houses of the labourers for which they have to pay, and of their own oftentimes wretched and unsanitary houses. Great efforts are now being made to promote sanitation, and especially to combat tuberculosis, that obtains so much in this country. We hear a great deal of the necessity of sanatoria for the cure or improvement of those affected by this disease. Why not go to the root of things? The sanatorium is to deal with the disease when contracted. Better improve the homes and make them sanitary, and thus stamp out disease effectually. Prevention is better than cure. Something should be done to provide the farmer, who himself has not the means, with a suitable and sanitary dwelling. It is true he may obtain a loan, but under great difficulties.

As the law stands at present, the occupiers of farms can obtain loans for the improvement of their holdings or the building of houses: (1.) if they be owners in fee; (2.) if they be yearly tenants. In the former case they can borrow a substantial sum at 5 per cent., repayable in thirty-five years; in the latter they can borrow three times the amount of the valuation of their holdings, repayable in twenty-two years at £6 10*s.* per cent. In both cases the moneys can be borrowed from the Board of Works. The repayment is secured by a charge or mortgage upon the holding of the borrower. The works to be done must be set out either on a map or plan to be approved of by the Board and the borrower must satisfy the Board of Works that he has a good title to the premises which he proposes to give as security for the loan. This, no doubt, seems perfectly right and simple, but unfortunately to make good legal title to the majority of holdings in the country is a matter of great difficulty, as anyone having experience of the country will understand. Nobody ever makes a will except he cannot help it, and it is then in the majority of cases, imperfectly drawn. The owner of a farm invariably dies intestate with a family of various ages. He happens to be possessed of a farm of land which was left by his father in precisely the same way, and which he came into more by accident than by arrangement, so that to trace the legal ownership of a farm for the purpose of giving a good charge is a matter of the greatest difficulty. It entails considerable expense and possibly exposes very frequently a family to litigation, which eventually ruins them. Apart from this difficulty there is the fact that this arrangement does not meet the great demand which now exists for the improvement of farmers' dwellings. Under the present arrangement, it depends on a man having good title and personal initiative to propose such a thing as a new house. It is not an infrequent experience to find that a farmer has borrowed money from the Board of Works and out of it erected fine stables for his horses, fine sheds for his hay, fine outhouses for his cattle; and to continue to live in a residence which has the recommendation of connection with bygone ages alone to commend it, but which is inferior to the very pigstye or poultry-house he has erected out of the Board of Works' loan.

The present position of the Public Health Acts is not sufficient to meet the situation. It should be in the power of the County Council or the sanitary authority or some other body that could act independently to make periodical inspections of the farmers' houses and to say which should be in a particular order replaced by houses more in accordance with modern ideas and in situations as far as possible from the present ones. It should be open to farmers who have their houses so condemned, or who, without their house being condemned, are anxious to improve their surroundings, to apply to the County Council for money to erect substantial houses. The situation of the houses should be fixed by the officials of the County Council; the building of them should be carried out by competent contractors, the occupiers of the land being enabled to contribute towards the expense of the houses by rough labour or materials. The County Council ought to be in a position, when money is so advanced, and when it is certified that it has been expended on the buildings erected on a farm, to charge that farm irrespective of the owner or occupier with the sum so advanced and the repayment of it as an annuity sufficient in (say) sixty-eight years to repay it. If possible arrangements should be made for the provision of money for such loans on as good terms as money advanced for labourers' cottages. At any rate an annuity of £3 10*s.* per cent. or £3 12*s.* 6*d.* per cent. ought to be sufficient to provide principal and interest. The County Council ought to be in a position to raise such money by the issue of bonds or stock.

Care of Labourers' Cottages.

The existing labourers' cottages are not sufficiently looked after from a sanitary point of view. There should be frequent periodical visitation by the sanitary authority, and reports demanded. I have seen the boarded floor of a room covered with dirt, and apparently never washed from the day it was laid down.

The street, as it is called, is often given over to the labourer in its natural clay, with no stoning. The entrance to his house is thus, in wet or dry weather, a continuous eyesore. All the surroundings should be given up in a neat condition, and the labourer then be made to keep them in proper trim.

B.—DRAINAGE OF BLACK RIVER.

SHORT REPORT on Rivers in the Electoral Division of Aughavas, Union of Mohill, County of Leitrim.

1. The river from the bridge on the county road from Mohill to Carrigallen, and lying between the townlands of Carrickavoher and Drumshambo, and running thence to its junction with the (Cloone River) Rynn and Black River drainage district is in a wretched state, with shoals formed in the bed of it, and in many places the banks slipped in and covered with bushes, etc. The total length of this river is 454 perches, and would cost at least 2*s.* 6*d.* per perch to clean it, and leave it in a proper state for the free discharge of the water; river coloured blue on O. S., 29 & 33.

2. Stream from junction with last river between the townlands of Carrickavoher and Corroneary, and extending to the mearing of the townlands of Aughavas and Drumgunnea for a length of 830 perches is in a similar state to river No. 1, except that the greater part of it is in worse order, but it is not quite so broad. This river would require an expenditure of 2*s.* 3*d.* per perch to leave it in fair order like No. 1. Its course is very level, and it injures all the meadowland along it with about twelve or fourteen hours' rain. River coloured as above.

3. Stream from junction with No. 1, between the townlands of Corroneary and Aughnalough to the townland of Killameen, total length about 874 perches; is very much in the same condition as rivers Nos. 1 and 2, and would cost 2*s.* per perch to leave it in fair repair. The catchment basin of the foregoing rivers is very large, and it would be a great boon to the people living in the locality, and whose meadows are flooded by them several times a year, if the works can be carried out.

NOTE.—A portion of the Cloone River, and lying between the stream at Murphy's Mill (coloured red) and the stepping-stones at the new bridge, Aughanaglace and Drumshambo, and coloured blue on sheet 29, County Leitrim, marked A. to B, is within the Rynn Black River drainage district, but was not left to be maintained by the Trustees. This portion of the river was not finished at all. In the bed of this river is a limestone rock, and there are three steps in it, which, if removed, would lower the water in the three foregoing rivers, but particularly in No. 1, in which it would lower it at least two feet six inches. If this work is carried out it would cost about £30.

JOSEPH IRWIN,
Assistant County Surveyor,
Derren Lodge, Dromod.

APPENDIX IX.

APPENDIX IX.—STATISTICAL ABSTRACT—CO. SLIGO.

A.—PREFATORY NOTE.

Special statistics relating to County Sligo have been prepared for the Commission by the Commissioner of Valuation (see pp. 277–8), the Registrar-General (see pp. 280–7), and the Department of Agriculture and Technical Instruction (see pp. 288–291, and 311), and certain returns have been furnished at the request of the Commission by the Local Government Board and the Congested Districts Board. Other information about County Sligo is available in different publications, *e.g.*, the Census Returns, the Annual Agricultural Statistics, the Annual Reports of the Irish Land Commission, the Estates Commissioners, the Congested Districts Board, &c.

All this statistical information has been brought together in the following pages, added to, and collated; and explanatory notes have been added, where required (*e.g.*, pp. 277, 279, 295, 306 and 312) with a view of forming a compact Statistical Abstract of the chief points of interest in County Sligo which may prove of assistance to the Commissioners during their sittings in County Sligo, and subsequently be helpful to readers of the evidence.

WALTER CALLAN,
Secretary.

4th April, 1907.

B.—GENERAL STATISTICAL INFORMATION, TAKEN FROM THE CENSUS REPORT, 1901, COUNTY SLIGO BOOK [CD. 1059–IV., 1902, pp. vii. and viii.]

The County of Sligo covers an area of 452,356 statute acres, or 2·2 per cent. of the total area of the country.

The number of persons in the County of Sligo, according to the Census was—in 1881, 107,479; in 1891, 94,416; and according to the recent Census, 84,083 (41,849 Males and 42,234 Females), or 10·9 per cent. less than in 1891.

The number of distinct Families in the County at the time of the late enumeration was 17,167, the average number of persons in a family being thus 4·8; and the number of Inhabited Houses was 17,049, showing an average of 4·8 persons to each house. In calculating these averages, the Special Inmates of Public Institutions have been omitted.

The following Statement shows, by County Districts, as constituted under the Local Government (Ireland) Act, 1898, the number of persons in 1891 and 1901: and the increase or decrease during the decade:—

COUNTY DISTRICTS.	Population.		Increase or Decrease between 1891 and 1901.		
	1891.	1901.	Increase.	Decrease.	Rate per cent.
Sligo Urban, . . .	10,774	10,870	596	.	5·8
Boyle No. 2 Rural, . .	16,033	13,757	.	2,276	14·2
Dromore West Rural. . .	15,019	13,034	.	1,985	13·2
Sligo Rural, . . .	30,880	27,218	.	3,662	11·9
Tobercurry Rural, . .	22,210	19,204	.	3,066	13·5
Total, . .	94,416	84,083	.	10,333	10·9

From the foregoing Statement it will be observed that there was an increase of 596 persons in Sligo Urban, and a decrease in each of the other County Districts. The highest percentage of decrease took place in Boyle No. 2 Rural, viz., 14·2; and the lowest in Sligo Rural, viz., 11·9.

Towns having, in 1901, a population of 2,000 and upwards are classified as Civic Areas.

The County contains one such Area, viz., Sligo. In 1891 the population of this Area amounted to 10,274; in 1901 it was 10,870, showing an increase of 596 persons, or 5·8 per cent.; in the rural portions of the County the decrease was 13·0 per cent.

The following Statement shows the Educational status of the Inhabitants of the County of Sligo in 1891 and 1901, in so far as relates to the degrees of elementary education relative to which inquiry was made on the Census Forms :—

Degrees of Elementary Education.	Rate per cent. of Total Population.	
	1891.	1901.
Read and Write,	60·3	69·6
Read only,	9·6	6·5
Illiterate,	30·1	23·9
Total,	100·0	100·0

From the above it will be seen that whereas, according to the Returns of 1891, only 60·3 per cent. of the Inhabitants, at all ages, could "read and write," in 1901, 69·6 per cent. could do so; that the percentage of the population who could "read only" in 1891 was 9·6, and in 1901, 6·5; and that the percentage of the "illiterate" fell from 30·1 in 1891 to 23·9 in 1901.

In 1891 22·4 per cent. of the Inhabitants aged five years and upwards were illiterate (22·0 per cent. of the males, and 22·8 of the females); in 1901 the percentage was but 16·0 (16·2 of the males, and 15·7 of the females.

The number of children attending school in the County of Sligo, according to the Census of 1891 (week ending 30th May), was 15,365, or 41·3 per cent. of persons aged 5 years and under 20 in the County as then constituted; in 1891 the number returned (for week ending 11th May), was 11,592, or 41·7 per cent. of the persons aged 5 and under 20.

In 1891 the number of persons in the County of Sligo (as then constituted) returned as Sick, on the night of the Census, was 600, or one in every 163 of the population; in 1901 the number so returned was 641, or one in every 131 of the population; of the latter number 361 were at their own homes, and 280 were in hospital.

The number of persons returned in 1891 as receiving relief under the Poor Law System was 1,734, or one in every 56 of the population; of this number 446 were inmates of Workhouses, and 1,288 were in receipt of outdoor relief; in 1901 the number returned was 1,672, or one in every 50 of the population; 558 of these being in the Workhouses, and 1,114 on outdoor relief.

According to the returns of the Registrar-General, the number of marriages registered in the County of Sligo during the ten years ending 31st March, 1901, was 3,238, equal to an average annual rate of 3·6 per 1,000 of the population. The number registered in the whole of Ireland during the same period affords an annual average rate of 4·8 per 1,000.

The number of Births registered in the County during the ten years was 18,074, affording an average annual rate of 20·3 per 1,000 of the population, the average yearly rate for the whole of Ireland during the same period being 23·0 per 1,000.

The Deaths registered during the decennium amounted to 13,002, being equal to an average annual rate of 14·6 per 1,000; the corresponding rate for the whole of Ireland was 18·2 per 1,000.

The number of Emigrants during the ten years ending 31st March, 1901, who stated that they were from the County of Sligo, amounted to 14,065 (6,057 males, and 8,008 females); the number for the decade ending 31st March, 1891, was 23,594; for that ending 31st March, 1881, 11,708; for that ending with March, 1871, 12,049; and for that ending with March, 1861, 13,328, making a total of 74,744 for the fifty years.

APPENDIX IX

C.—RETURN showing the Population, Area, Valuation, and Average Valuation per Head of Population in each Poor Law Union in County Sligo containing Congested Districts.

Supplied by the Congested Districts Board.

† Included by order of the Lord Lieutenant.

E.—RETURN SHOWING THE RATIO OF POPULATION TO VALUATION IN CERTAIN ELECTORAL DIVISIONS IN CO. SLIGO, AND OTHER PARTICULARS.†

Specially prepared for the Commission.

EXPLANATORY NOTE.

This return (prepared by the Commissioner of Valuation) shows the total rateable valuation (1906), the population (1901), and the average valuation per head of population in each Electoral Division in Co. Sligo.

(1.) Where that average is under 30*s.*

(2.) Where that average is between 30*s.* and 50*s.*, but is brought below 30*s.* by the exclusion from the dividend (*i.e*, the total rateable valuation of the electoral division) of all ratings valued at over £50. In these cases the acreage and valuation of each excluded area is given.

(3.) Where the electoral division, though scheduled as congested, does not come within either of the above classes.

The total number of electoral divisions in Sligo is 82, of which 79 are rural and 3 urban. The total number of electoral divisions comprised in this return is 21, all rural; of these only one (Templevanny) is not scheduled as congested, and is distinguished by an asterisk.

The total number of divisions in Co. Sligo scheduled in 1891 as congested was 20, of which 5 were then not below 30*s.* in point of average valuation per head of population. Between 1891 and 1901 the average valuation rose about 17 per cent. (owing mainly to the decrease in population), and of the 20 divisions, 12 are not now below 30*s.* Of these 12 divisions, 3 are not below 30*s.* normally, but are when the total valuation of all ratings above £50 is excluded, and 9 are above 30*s.* even after these exclusions. The names of these 9 divisions are printed in italics.

F. STATISTICS RELATING TO THE NUMBER, ACREAGE, VALUATION AND POPULATION OF VARIOUS CLASSES OF HOLDINGS, AND TO THE CHIEF DIVISIONS OF THE LAND IN COUNTY SLIGO.

Specially prepared for the Commission.

EXPLANATORY NOTE.

The information contained in the Tables I.-IV. has been specially prepared for the Commission by the Registrar-General from the office summaries of the Census of 1901. The importance of the figures and their interpretation were touched upon in a memorandum submitted by the Secretary to the Commission, and printed in the Appendices to the First Report of the Commission, pp. 351 *et seq.* It will suffice to remark here that, though nominally these tables are returns of "holdings," they are really returns of landholders, for, if one man has half-a-dozen farms in the same county, he is returned as having a single holding of their combined valuation. It is obvious that, so far as counties are concerned, these returns, being actually though not nominally returns of landholders, show more clearly the size of the problem requiring treatment than a return of holdings would—*e.g.*, a man has in County Sligo six holdings valued at £2, £4, £6, £10, £20, and £40. A return of holdings would in this case apparently suggest that there were at least three holdings needing enlargement; whilst the present returns more clearly indicate the situation by showing only one holding of £82 valuation. As regards the size of the remedial material that might be made available for relieving congestion, these returns might, however, mislead—*e.g.*, in the case taken above the returns would suggest that there was in County Sligo one holding of £82 valuation that possibly might be secured for the enlargement of small holdings; whilst in point of fact there are six holdings of varying size scattered over the county.

The interpretation of the figures becomes more complicated when they are examined not for the whole of a county, but for the comparatively small area of an electoral division—the present unit of congestion. In these returns where one man has several holdings in County Sligo, but in different electoral divisions, or has one holding which runs into two electoral divisions, the entire is allocated to the division containing the holding or the part of the holding of highest valuation; hence the figures in these returns do not represent the actual state of things in each electoral division, as they may include in such division land situate in other electoral divisions (of County Sligo), and may exclude land geographically belonging to the division itself. Thus the area, population, or valuation shown for an electoral division might be larger or smaller than the actual area, population, or valuation of that division. Adjustments could have been made rectifying this, but they would have immensely complicated matters. Moreover, the returns would then have been based in part on holdings rather than on landholders, and this would, for the reason shown above, have exaggerated the size of the problem. Consequently the Commission, having considered the relative advantages of adjusted and unadjusted returns of holdings and landholders, decided that as regards most areas the unadjusted returns of landholders by electoral divisions would be the most useful.

The information contained in Tables V. and VI. has been specially prepared for the Commission by the Department of Agriculture and Technical Instruction for Ireland from the office summaries of the Agricultural Statistics of 1906. Their importance and interpretation were touched upon in the memorandum to which reference has been already made, and it will suffice to remark here that the difference between the number of holdings given in Table V. and the number given in Table I. is accounted for by the following causes:—

(1) Table V. is a return of holdings, and Table I. a return of landholders;

(2) Table I. refers to agricultural holdings only, and Table V. includes labourers' cottage holdings and gardens; and

(3) Differences of classification and adjustment.

ENDIX IX.

The following detailed information as regards direct sales is taken from the Report of the Estates Commissioners for 1906 (pp. 28–35):—

In the County Sligo (non-congested), 94 holdings, subject to judicial rents fixed or agreed to before the 14th August, 1896 (commonly called First Term Rents), amounting to £1,481 2*s*., were sold at prices which came within the zones; the average number of years' purchase being 22·5, and the average percentage of reduction in the purchase annuity as compared with the rent being 26·8.

In Sligo (non-congested), one holding, subject to a First Term Rent of £32 0*s*. 6*d*., was sold at a price outside the zones; the number of years' purchase being 25, and the reduction 18·7 per cent.—which is less than the minimum zone reduction.

In the County Sligo (congested), 84 holdings, subject to First Term Rents amounting to £506 19*s*. 8*d*., were sold at prices which came within the zones; the average number of years' purchase being 22·5, and the average percentage of reduction in the purchase annuity as compared with the rent being 26·8.

As regards holdings subject to rents fixed or agreed to since the 14th August, 1896 (commonly called Second Term Rents), 49, subject to a rental of £1,221 9*s*. 6*d*., were sold in Sligo (non-congested) at a price within the zones; the average number of years' purchase being 26·3 and the percentage of reduction being 14·5.

Fifteen holdings were sold at a price outside the zones. Of these, 14, subject to a rental of £80 18*s*. 6*d*., were sold for 19·8 years' purchase; the percentage of reduction being 35·6, *i.e.*, a greater percentage than the maximum zone reduction. The other holding, subject to a rental of £11, was sold for 27·7 years' purchase; the average percentage of reduction being 9·9, *i.e.*, less than the minimum zone reduction.

In Sligo (congested), 31 holdings, subject to Second Term Rents of £160 19*s*. 7*d*., were sold, within the zones, for an average of 23·7 years' purchase, the average percentage of reduction being 22·9.

As regards non-judicial rent cases, 28 holdings in Sligo (non-congested), subject to a rental of £745 3*s*. 0*d*., were sold for an average of 22·3 years' purchase, the average percentage of reduction being 27·5. In Sligo (congested), 14 holdings, subject to £87 rent, were sold for an average of 21·5 years' purchase; the average percentage of reduction being 30·1.

In Sligo (non-congested), 13 holdings, subject to a rental of £596 8*s*. 0*d*., were sold for £13,661, of which £4,746 was paid in cash by the purchaser, and £8,915 was advanced by the Irish Land Commission. One "parcel" was sold in Sligo (non-congested) under Section 2, sub-section (1); and one demesne was sold in Sligo (congested) under Section 3.

M.—LOCAL TAXATION IN COUNTY SLIGO.

The following STATEMENTS show (1) the Poor Rates in each Electoral Division in each Union for the financial years ending in 1881 and 1891; (2) County Cess in each Barony in the County in 1891—there is no official information available as to County Cess in 1881; and (3) fuller details about the new Poor Rate for 1901 and 1905. It must, however, be pointed out that the Rates in 1881 and 1891 cannot be compared with the Rates in 1901 and 1905. Prior to the Local Government (Ireland) Act, 1898, Poor Rate was charged to Electoral Divisions and County Cess to Baronies. Now Union charges are levied over the whole Union, District charges on Rural Districts, County charges on the County, separate charges on special areas, and the whole is complicated by the charges made in the rates by the Local Government Act of 1898.

Before that Act the Poor Rate was paid by the tenant (except in the case of holdings valued at £4 and under where the landlord paid), but the tenant was entitled to deduct part of the amount paid from his rent, usually half. County Cess was paid and borne by the occupier, except in the case of holdings let after the 1st August, 1870. In these cases if the holding was valued at over £4 the tenant paid, but was entitled to deduct from his rent part of the amount paid, usually one-half. If the holding was valued at £4 or under, the County Cess was paid by the landlord.

Under the Act a Grant in Aid called the Agricultural Grant and amounting to £727,655 is made annually to the local authorities. This Grant is equal to half the combined Poor Rate and County Cess which was certified to be taken to have been raised off agricultural land in what is known as the standard financial year. The balance of the money required for purposes formerly met out of the County Cess and the Poor Rate is now provided by means of the new Poor Rate, County Cess being no longer collected *eo nomine*.

APPENDIX IX.

The Act was intended to secure the benefit of the Agricultural Grant in respect of existing tenancies to the landlord as regards the old Poor Rate, and to the tenant as regards the County Cess. In order to effect this it was provided that in the case of tenancies existing at the 1st April, 1899, the tenant should, in general, pay the new Poor Rate, but that the rent should be adjusted in such a way as to secure to landlord and tenant their respective shares of the benefit of the Agricultural Grant. In the case of tenancies created after the 1st April, 1899, the tenant must, in general, pay the Poor Rate, and has no right to deduct anything from his rent. Where a fair rent is fixed after the 1st April, 1899, special provision is made by Section 55 to ensure permanently to the occupier and the landlord their respective benefits from the Agricultural Grant.

1. STATEMENT showing the Poor Rate in the £ made in the Electoral Divisions of the Unions which are included wholly or partly in COUNTY SLIGO for the financial years ended 1881 and 1891.

Specially prepared by Local Government Board.

(a) The Enumeration of Emigrants from Irish Ports did not commence till the 1st of May, 1851.
(b) The nearest date to the time of the Census for which the Emigration Returns can be made up.

APPENDIX IX.

S.—STATE-AIDED EMIGRATION.

It may be as well to explain that under 12 and 13 Vic., cap. 104, sec. 26, Boards of Guardians were empowered to apply part of the rates and to borrow money "for the purpose of defraying or assisting to defray the expenses of the emigration of poor persons."

Under the Arrears of Rent (Ireland) Act, 1882 (45 and 46 Vic., c. 47), power was given to borrow from Public Funds on easier terms for the above purposes, and the Treasury might authorise the Commissioners of Public Works to make grants to Boards of Guardians for the same purposes, the total grants not to exceed £100,000, and the sums granted not to exceed £5 for each person. The grants were confined to the nine counties, part of which are at present scheduled as congested, the Unions of Belmullet, Newport, Swinford, Clifden, and Oughterard, being specially mentioned.

Under the Tramways and Public Companies (Ireland) Act, 1883 (46 and 47 Vic., c. 43), the limit of the grant was increased to £200,000, of which one-quarter might be applied for the purpose of migrating "persons or families," and the limit of individual grants was increased to £8.

The total grants made under these sections amounted to £133,172 10*s.* 2*d.* up to 1891, when they were repealed by Section 35 of the Land Act of 1891, which established the Congested Districts Board.

The following Table shows the total number of State-aided Emigrants from Sligo in 1883 and in 1884, and the amount of grant to each Union.

Supplied by the Local Government Board.

Union.	Emigration Season, 1883.			Emigration Season, 1884.			Total.	Total Grant.
	Canada.	Australia.	United States.	Canada.	Australia.	United States.		£ s. d.
Boyle,	95	6	239	—	—	—	340	1,645 10 0

8.—STATEMENT as to SIRES, BULLS, and BOARS.

Taken from Agricultural Statistics, 1905.

The number of Sires in County Sligo serving Mares in 1905 (pp. 114-5) was as follows:—

Thoroughbred,	10
Half-bred,	4
Hackney,	2
Shire,	—
Clydesdale,	3
Agriculture,	4
All others,	5
Total,	28

The number of Bulls of the principal breeds, &c., in County Sligo in 1905 (pp. 116-7) was as follows:—

Shorthorn,	179
Hereford,	3
Aberdeen Angus,	23
Norfolk and Suffolk Red Polled,	4
Kerry,	4
Dexter,	1
Guernsey, Jersey, and Alderney,	5
Cross Breed or not included in foregoing,	15
Total,	234

The number of Boars kept for breeding purposes in County Sligo in 1905 (pp. 118-9) was as follows:—

White pigs,	34
Black pigs,	1
Tawny or brown pigs,	—
Cross-bred,	1
Boars not coming under any of the foregoing heads,	—
Total,	36

9.—STATEMENT showing the Total Area under each of the principal varieties of Potatoes grown in County Sligo, and the Average Rate of Produce per statute acre in cwts. of 112 lbs.

(a.) Very little employment during the winter. Only a few women or girls employed.
(b.) Women or girls not generally employed.
(c.) Without food.

V.—INFORMATION AS TO SCHEMES OF DEPARTMENT OPERATING IN COUNTY SLIGO IN 1906.

The following information, about some of the work of the Department of Agriculture and Technical Instruction in County Sligo during the year 1906-7, may be of use:—

Schemes in Operation.	Estimated Cost.
Winter Schools,	200
Live Stock,	575
Horticulture,	190
Poultry-keeping,	135
Butter-making,	80
Subsidies to Shows,	200

There were three registered stallions (thoroughbred) stationed in the county, and one, located in County Mayo, used to attend at Easkey, County Sligo, one day in each week. One hundred nominations were issued to Sligo mares for service by registered sire, of which forty were given to residents in the congested areas.

There were two stallion asses located in the county with the following persons:—

Michael Nicholson, Corbeg, Castlegall.

Francis M'Dermott, Glencar, Sligo.

The total number of bulls located in the county was nineteen, of which fifteen were in the non-congested portion and four in the congested portion.

The number of premium bulls located in the county during the last six years was as follows:—

1901,	6
1902,	14
1903,	14
1904,	20
1905,	18
1906,	19

The following shows the location of the bulls in 1906:—

Yearlings.

A.A. 1. Patrick Brennan, Doonsheheen, Ballindoon.
A.A. 2. Patrick Ross, Rathmactiernan, Coolaney.
A.A. 3. John E. Morrison, Woodhill, Ballymote.
A.A. 4. Maurice Kivelehan, Beltra, Carrownedan, Coolaney.
S.H. 5. Michael Collery, Carrownedan, Coolaney.
S.H. 6. Thomas Hannon, Rundale Lodge, Cliffoney.

Two-Year-Olds.

S.H. 7. James Rowlette, Cregg, Sligo.
S.H. 8. Rodger Davey, Drumiskabole, Ballisodare.
S.H. 9. Francis O'Gara, Dechomade, Ballymote.
A.A. 10. Mathias Ferguson, Kilmacannon, Cloughboley.
S.H. 11. William Mitchell, Beltra, Ballisodare.

Three-Year-Olds.

S.H. 12. John J. Higgins, Farniharpy, Skreen.
S.H. 13. Michael Gallagher, Kilnamonagh, Collooney.
S.H. 14. William Barber, Sooey, Riverstown.
S.H. 15. Thomas O'Dowd, Goldfield, Chaffpool.
A.A. 16. Bernard Scanlan, Cloonmull, Drumcliffe.
A.A. 17. Cornelius Henry, Carrowmacarrick, Coolaney.
A.A. 18. John Morrison, Cloughfin, Collooney.
A.A. 19. Patrick Henry, Ross, Skreen.

There were sixteen boars placed in the county in 1906, of which eleven were in non-congested districts.

The number in the county during the last six years was as follows:—

1901,	7
1902,	9
1903,	9
1904,	13
1905,	16
1906,	16

The boars were located in 1906 as follows:—

First Year Premium Boars.

1. Owen Carr, Carn, Gurteen.
2. Peter Cunningham, Mount Edward, Breagh-wy.
3. John Furey, Riverstown.
4. Bryan Scanlon, Clonacoola, Ballymote.
5. Owen Toolen, Meelroe, Cloonlon, Boyle.
6. John Meehan, Kilshalvey, Ballymote.
7. Patrick Lynch, Annaghcur, Castlebaldwin.
8. James M'Donagh, Mahanagh, Boyle.
9. John J. Donnelly, Ardlebeg, Collooney.
10. Mathias Ferguson, Kilmacannon, Cloghboley.
11. Patrick Curley, Knockrawer, Kilavill, Ballymote.
12. Thomas Durkan, Carrownacleigh.

Second Year Premium Boars.

13. J. R. Barber, Knockbeg, Collooney.
14. Michael Devaney, Achonry, Ballymote.
15. John Kelleher, Kilturra, Bunninadden.
16. Michael Henry, Cashel North, Carrownedin.

The number of egg-distributing centres in 1906 was twelve, of which three were in congested areas. The centres were as follows:—

1. Mrs. Nicholson, Urlar, Carney.
2. Mrs. F. Cawley, Fetherneen, Ballinacanow.
3. Mrs. T. McGethrick, Porthinch, Ballymote.
4. Mrs. T. Benson, Rodestown, Bunninadden.
5. Mrs. Henry, Dromore House, Dromore.
6. The Superioress, The Convent, Banada.
7. Mrs. Brennan, Achonry, Ballymote.
8. Mrs. McMullen, Tallyho Lodge, Tully, Sligo.
9. Miss Kearns, Kilcat, Grange.
10. Mrs. Kavanagh, Farniharpy, Skreen.
11. Mrs. J. Burke, Farrellmacfarrell, Dromore West.
12. Mrs. E. Cawley, Dooneen House, Dooneen, Castleconnor.

The number of turkey-raising stations in Sligo in 1906 was seven, of which two were in congested areas. The stations were as follows:—

1. Mrs. F. Cawley, Fetherneen, Ballincarrow.
2. Mrs. F. Barber, Cashelgarron, Sligo.
3. Mrs. Thomas Benson, Roadstown, Bunninadden.
4. Miss E. Kearins, Kilcat, Grange.
5. Mrs. B. Brennan, Achonry, Ballymote.
6. Mrs. M. McGettrick, Cartoon, Ballymote.
7. Mrs. Killoran, Killashalvey, Gurteen.

APPENDIX IX

W.—NOTE ON MIGRATORY LABOURERS.

The special characteristics of the temporary migration of agricultural labourers from the congested districts, which distinguish it from apparently similar movements of labour in other counties and from the ordinary examples of the mobility of labour in other trades, have been briefly discussed in the Donegal Statistical Abstract (see Appendix to Second Report of Commission, Cd. 3319, 1907, pp. 314-5). The total number of persons (including females) who had temporarily migrated from Ireland, or who at the time of the collection of the Agricultural Statistics in 1906 had expressed their intention of subsequently migrating was 15,286. Of this number 688 were resident in County Sligo. Of these only 125 were landholders, but of the landless labourers 365 were the sons, and 5 were the daughters of landholders who worked on their parents' farm when at home. The following Table taken from the Annual Report of the Department of Agriculture on Irish Migratory Labourers for 1905 (page 45), gives further information on the subject.

Poor Law Union.	Number of Migratory Agricultural Labourers not Landholders.	Number of Migratory Agricultural Labourers having Land, and Area of their Holdings.												Total Number of Migratory Agricultural Labourers.	Where Employed.			Number of Migratory Agricultural Labourers who had not left their homes at the time of the Inquiry, included in foregoing Columns

APPENDIX X.—STATISTICAL ABSTRACT—CO. LEITRIM.

A.—PREFATORY NOTE.

Special statistics relating to County Leitrim have been prepared for the Commission by the Commissioner of Valuation (see pp. 326-7), the Registrar-General (see pp. 329-40) and the Department of Agriculture and Technical Instruction (see pp. 341-4), and certain returns have been furnished at the request of the Commission by the Local Government Board and the Congested Districts Board. Other information about Co. Leitrim is available in different publications, *e.g.*, the Census Returns, the Annual Agricultural Statistics, the Annual Reports of the Irish Land Commission, the Estates Commissioners, the Congested Districts Board, &c.

All this statistical information has been brought together in the following pages, added to, and collated, and explanatory notes have been added, where required (*e.g.*, pp. 326, 328, 348, 358, and 364), with the view of forming a compact Statistical Abstract of the chief points of interest in Co. Leitrim, which may prove of assistance to the Commissoners during their sittings in County Leitrim, and subsequently be helpful to readers of the evidence.

WALTER CALLAN,

Secretary.

4th April, 1907.

B.—GENERAL STATISTICAL INFORMATION TAKEN FROM THE CENSUS REPORT, 1901.

COUNTY LEITRIM BOOK (Cd. 1059—1, 1902, pp. vii. and viii.)

The County of Leitrim covers an area of 392,381 statute acres, or 1·9 per cent. of the total area of the country.

The number of persons in the County of Leitrim according to the Census was—in 1881, 90,372; in 1891, 78,618; and according to the recent Census, 69,343 (35,098 Males and 34,245 Females), or 11·8 per cent. less than in 1891.

The number of distinct Families in the County at the time of the late enumeration was 14,519, the average number of persons in a family being thus 4·8; and the number of Inhabited Houses was 14,397, showing an average of 4·8 persons to each house. In calculating these averages, the Special Inmates of Public Institutions have been omitted.

The following Statement shows, by County Districts (as constituted under the Local Government (Ireland) Act, 1898), the number of persons in 1891 and 1901; and the decrease during the decade:—

COUNTY DISTRICTS.	Population.		Decrease between 1891 and 1901.	
	1891.	1901.	Number.	Rate per cent.
Ballyshannon No. 3 Rural,*	5,978	5,229	749	12·5
Bawnboy No. 2 Rural,†	10,037	8,887	1,150	11·5
Carrick-on-Shannon No. 1 Rural, ...	14,667	13,039	1,628	11·1
Manorhamilton Rural, ...	25,465	22,334	3,131	12·3
Mohill Rural, ...	22,471	19,854	2,617	11·6
Total, ...	78,618	69,343	9,275	11·8

* Now Kinlough Rural. † Now Ballinamore Rural.

From the foregoing Statement it will be observed that the highest percentage of decrease in the County Districts took place in Ballyshannon No. 3 Rural and Manorhamilton Rural, viz., 12·5 and 12·3 respectively; and the lowest in Carrick-on-Shannon No. 1 Rural and Bawnboy No. 2 Rural, viz., 11·1 and 11·5 respectively.

APPENDIX X.

The following Statement shows the Educational status of the Inhabitants of the County of Leitrim in 1891 and 1901, in so far as relates to the degrees of elementary education relative to which inquiry was made on the Census Form.

Degrees of Elementary Education.	Rate per cent. of Total Population.	
	1891.	1901.
Read and Write, ...	63·7	72·3
Read only, ...	11·2	7·1
Illiterate, ...	25·1	20·6
Total, ...	100·0	100·0

From the above it will be seen that whereas, according to the Returns of 1891, only 63·7 per cent. of the Inhabitants, at all ages, could "read and write," in 1901, 72·3 per cent. could do so; that the percentage of the population who could "read only" in 1891 was 11·2, and in 1901, 7·1; and that the percentage of the "illiterate" fell from 25·1 in 1891 to 20·6 in 1901.

In 1891, 16·4 per cent. of the inhabitants aged five years and upwards were illiterate (16·4 per cent. of the males and 16·5 of the females); in 1901 the percentage was but 12·1 (12·6 of the males, and 11·6 of the females).

The number of children attending school in the County of Leitrim, according to the Census of 1891 (week ending 30th May), was 13,637; or 45·9 per cent. of persons aged 5 years and under 20 in the County as then constituted, in 1901 the number returned (for week ending 11th May), was 10,625, or 45·5 per cent. of the persons aged 5 and under 20.

In 1891 the number of persons in the County of Leitrim (as then constituted) returned as Sick, on the night of the Census, was 471, or one in every 167 of the population; in 1901 the number so returned was 361, or one in every 192 of the population; of the latter number 222 were at their own homes, and 139 were in hospital.

The number of persons returned in 1891 as receiving relief under the Poor Law system was 1,365, or one in every 57 of the population; of this number 432 were inmates of Workhouses, and 933 were in receipt of outdoor relief; in 1901 the number returned was 1,040, or one in every 67 of the population; 330 of these being in the Workhouses, and 710 on outdoor relief.

According to the returns of the Registrar-General, the number of marriages registered in the County of Leitrim during the ten years ending 31st March, 1901, was 2,799, equal to an average annual rate of 3·8 per 1,000 of the population. The number registered in the whole of Ireland during the same period, affords an annual average rate of 4·8 per 1,000.

The number of Births registered in the County during the ten years was 15,117, affording an average annual rate of 20·4 per 1,000 of the population, the average yearly rate for the whole of Ireland during the same period being 23·0 per 1,000.

The Deaths registered during the decennium amounted to 10,608, being equal to an average annual rate of 14·3 per 1,000; the corresponding rate for the whole of Ireland was 18·2 per 1,000.

The number of Emigrants during the ten years ending 31st March, 1901, who stated that they were from the County of Leitrim, amounted to 9,830 (4,417 males, and 5,413 females); the number for the decade ending 31st March, 1891, was 21,008; for that ending 31st March, 1881, 12,683; for that ending with March, 1871, 13,980; and for that ending with March, 1861, 16,820, making a total of 74,321 for the fifty years.

C.—Return showing the Population, Area, Valuation, and Average Valuation per head of Population in each Poor Law Union in Co. Leitrim containing Congested Districts.

Supplied by the Congested Districts Board.

APPENDIX X.

E.—RETURN SHOWING THE RATIO OF POPULATION TO VALUATION IN CERTAIN ELECTORAL DIVISIONS IN CO. LEITRIM, AND OTHER PARTICULARS.*

Specially prepared for the Commission.

EXPLANATORY NOTE.

This return (prepared by the Commissioner of Valuation) shows the total rateable valuation (1906), the population (1901), and the average valuation per head of population in each Electoral Division in Co. Leitrim.

(1.) Where that average is under 30*s*.

(2.) Where that average is between 30*s*. and 50*s*., but is brought below 30*s*. by the exclusion from the dividend (*i.e.*, the total rateable valuation of the electoral division) of all ratings valued at over £50. In these cases the acreage and valuation of each excluded area is given.

(3.) Where the electoral division though scheduled as congested does not come within either of the above classes.

The total number of electoral divisions in Leitrim is 78, all rural. The total number of electoral divisions comprised in this return is 38, all rural, and all scheduled as congested.

The total number of divisions in Co. Leitrim scheduled in 1891 as congested was 38, of which 5 were then not below 30*s*. in point of average valuation per head of population. Between 1891 and 1901 the average valuation rose about 15 per cent. (owing mainly to the decrease in population), and of the 38 divisions, 25 are not now below 30*s*. Of these 25 divisions, 4 are not below 30*s*. normally, but are when the total valuation of all ratings above £50 is excluded, and 21 are above 30*s*. even after these exclusions. The names of these 21 divisions are printed in italics.

APPENDIX X.

F.—STATISTICS RELATING TO THE NUMBER, ACREAGE, VALUATION AND POPULATION OF VARIOUS CLASSES OF HOLDINGS, AND TO THE CHIEF DIVISIONS OF THE LAND IN CO. LEITRIM.

Specially prepared for the Commission.

EXPLANATORY NOTE.

The information contained in the Tables I.-IV. has been specially prepared for the Commission by the Registrar-General from the office summaries of the Census of 1901. The importance of the figures and their interpretation were touched upon in a memorandum submitted by the Secretary to the Commission, and printed in the Appendices to the First Report of the Commission, pp. 351 *et seq.* It will suffice to remark here that, though nominally these tables are returns of "holdings," they are really returns of landholders, for, if one man has half-a-dozen farms in the same county, he is returned as having a single holding of their combined valuation. It is obvious that, so far as counties are concerned, these returns, being actually though not nominally returns of landholders, show more clearly the size of the problem requiring treatment than a return of holdings would—*e.g.*, a man has in County Leitrim six holdings valued at £2, £4, £6, £10, £20, and £40. A return of holdings would in this case apparently suggest that there were at least three holdings needing enlargement; whilst the present returns more clearly indicate the situation by showing only one holding of £82 valuation. As regards the size of the remedial material that might be made available for relieving congestion, these returns might, however, mislead—*e.g.*, in the case taken above the returns would suggest that there was in County Leitrim one holding of £82 valuation that possibly might be secured for the enlargement of small holdings; whilst in point of fact there are six holdings of varying size scattered over the county.

The interpretation of the figures becomes more complicated when they are examined not for the whole of a county, but for the comparatively small area of an electoral division—the present unit of congestion. In these returns where one man has several holdings in County Leitrim, but in different electoral divisions or has one holding which runs into two electoral divisions, the entire is allocated to the division containing the holding or the part of the holding of highest valuation; hence the figures in these returns do not represent the actual state of things in each electoral division, as they may include in each such division land situate in other electoral divisions (of County Leitrim), and may exclude land geographically belonging to the division itself. Thus the area, population, or valuation shown for an electoral division might be larger or smaller than the actual area, population, or valuation of that division. Adjustments could have been made rectifying this, but they would have immensely complicated matters. Moreover, the returns would then have been based in part on holdings rather than on landholders, and this would, for the reason shown above, have exaggerated the size of the problem. Consequently the Commission, having considered the relative advantages of adjusted and unadjusted returns of holdings and landholders, decided that as regards most areas the unadjusted returns of landholders by electoral divisions would be the most useful.

The information contained in Tables V. and VI. has been specially prepared for the Commission by the Department of Agriculture and Technical Instruction for Ireland from the office summaries of the Agricultural Statistics of 1906. Their importance and interpretation were touched upon in the memorandum to which reference has been already made, and it will suffice to remark here that the difference between the number of holdings given in Table V. and the number given in Table I. is accounted for by the following causes:—

(1) Table V. is a return of holdings, and Table I. a return of landholders;

(2) Table I. refers to agricultural holdings only, and Table V. includes labourers' cottage holdings and gardens; and

(3) Differences of classification, and adjustment.

I.—Table showing Total Number of Holdings and Number of each of Eleven Classes, arranged according to Valuation, in the County of Leitrim.

Unions and Electoral Divisions.	Total Number of Holdings.	Classification of Holdings and Number in each Class.										
		Not exceeding £4.	Above £4 and not exceeding £10.	Above £10 and not exceeding £15.	Above £15 and not exceeding £20.	Above £20 and not exceeding £30.	Above £30 and not exceeding £40.	Above £40 and not exceeding £50.	Above £50 and not exceeding £100.	Above £100 and not exceeding £200.	Above £200 and not exceeding £300.	Above £300 in value.

G.—TABLES SHOWING THE WORKING OF THE LAND ACTS IN CO. LEITRIM.

1. TABLE showing the Number of Cases in Co. Leitrim in which *Judicial Rents have been fixed by all the Methods* provided by the Land Law Acts, for First and Second Statutory Terms, *from the commencement of Proceedings to 31st March,* 1906; and also a Summary of the Acreages, Rents of Holdings prior to the creation of First Statutory Term, Rents of Holdings for a First Statutory Term, and Rents of Holdings for a Second Statutory Term. (Arranged from the Report of the Irish Land Commissioners for the year ending 31st March, 1906, pp. 72 and 74).

First or Second Statutory Term.	Number of Cases in which Judicial Rents have been fixed.	Acreage, Statute Measure.	Rents of Holdings prior to creation of First Statutory Term.	Judicial Rents fixed for a First Statutory Term.	Percentage of Reduction.	Judicial Rents fixed for a Second Statutory Term.	Percentage of Reduction of Rents fixed for a Second Statutory Term on Rents fixed for a First Statutory Term.
		A. R. P.	£ s. d.	£ s. d.		£ s. d.	
First Term, ..	11,649	247,672 2 38	124,922 14 9½	96,991 4 2	22·3	—	—
Second Term, ..	4,390	103,613 1 4½	57,742 9 4½	44,839 12 8½	22·3	35,339 1 4	21·2

2. TABLE showing the Number of Loans issued in Co. Leitrim under the Purchase of Land (Ireland) Act. 1885 (Advances in Cash), the Number of Estates, and the Total Acreage and Rental of the Holdings in respect of which the Loans have been issued; also the Total Purchase-money and the amount of Loans obtained from Land Commission, and the Number of Years' Purchase of Rent, during the period from 22nd August, 1885, to 31st March, 1902.

During the four years ended the 31st March, 1906, *there were no further proceedings towards purchase taken under this Act.*

Taken from the Report of the Irish Land Commissioners for the year ended 31st March, 1906, p. 94.

Number of Loans.	Number of Estates.	Area in Statute Measure.	Net Rent (*a*)	Purchase-money agreed upon.	Amount of Loans.	Number of years' purchase of Rent.
		A. R. P.	£ s. d.	£	£	
539	19	12,810 0 5	5,964 16 0	96,623	94,620	16·1

(*a*) The Rents stated in this Return are the Rents payable by the Tenants previous to the sale, except in a few cases where the Tenants agreed to purchase subject to a Head Rent, Crown Rent, Tithe Rent, or Drainage Charge or other outgoing, previously payable by the Landlord, and in such cases the outgoing has been deducted from the Rent previously payable by the Tenant.

3. TABLE showing the Number of Loans issued in Co. Leitrim under the Purchase of Land (Ireland) Acts 1891, 1896 (Advances in Guaranteed Land Stock), and the Total Acreage and Rental of the Holdings in respect of which the Loans have been issued; the Total Purchase-money and the Amount of Loans obtained from the Land Commission, and the Number of Years' Purchase of Rent, during the period ended 31st March, 1906.

Taken from the Report of the Irish Land Commissioners for the year ended 31st March 1906, p. 116.

The following detailed information as regards direct sales is taken from the Report of the Estates Commissioners for 1906 (pp. 28 to 35):—

In the County Leitrim (non-congested), one holding, subject to a judicial rent fixed, or agreed to, before the 14th August, 1896 (commonly called a first term rent) amounting to £2 10*s.*, was sold at a price which came within the zones, the number of years' purchase being 20·8, and the percentage of reduction in the purchase annuity, as compared with the rent being 32·4. One holding subject to a first term rent of £23, was sold outside the zones, the number of years' purchase being 17·2 and the percentage of reduction 44·1, *i.e.*, a reduction greater than the maximum reduction within the zones.

In the County Leitrim (congested), 13 holdings, subject to judicial rents fixed, or agreed to, before the 14th August, 1896 (commonly called first term rents), amounting to £60 12*s.* 6*d.*, were sold at prices which came within the zones; the average number of years' purchase being 20·7, and the average percentage of reduction in the purchase annuity, as compared with the rent, being 32·7. Two holdings, subject to first term rents of £12 4*s.*, were sold at a price outside the zones; the average number of years' purchase being 25·1, and the average reduction 18·4 per cent.—which is less than the minimum zone reduction.

As regards holdings subject to rents fixed, or agreed to, since the 14th August, 1896 (commonly called second term rents), 16, subject to a rental of £106 7*s.* 6*d.*, were sold in Leitrim (non-congested), at an average of 21·8 years' purchase; the average percentage of reduction being 29·1. Nine holdings were sold at a price outside the zones; the rental being £53 15*s.*; the average number of years' purchase being 21·5, and the average percentage of reduction being 30·1, *i.e.*, a greater percentage than the maximum zone reduction.

In Leitrim (congested) 10 holdings, subject to second term rents of £44 9*s.* 9*d.*, were sold, within the zones, for an average of 25·6 years' purchase; the average percentage of reduction being 16·8. Two holdings, subject to a second term rent of £13 5*s.*, were sold, outside the zones, for an average of 13·4 years' purchase; the average percentage of reduction being 56·4, which is greater than the maximum zone reduction.

As regards non-judicial rent cases, 10 holdings in Leitrim (non-congested), subject to a rental of £109 12*s.* 6*d.*, were sold for an average of 20·1 years' purchase; the average percentage of reduction being 34·6, and in Leitrim (congested), one holding, subject to 10*s.* rent, was sold for 22·0 years' purchase; the percentage of reduction being 28·5. One "parcel" was sold in Leitrim (non-congested) under section 2, sub-section (1).

M.—LOCAL TAXATION IN COUNTY LEITRIM.

The following STATEMENTS show (1) the Poor Rates in each Electoral Division in each Union for the financial years ending in 1881 and 1891; (2) County Cess in each Barony in the County in 1891—there is no official information available as to County Cess in 1881; and (3) fuller details about the new Poor Rate for 1901 and 1905. It must, however, be pointed out that the Rates in 1881 and 1891 cannot be compared with the Rates in 1901 and 1905. Prior to the Local Government (Ireland) Act, 1898, Poor Rate was charged to Electoral Divisions and County Cess to Baronies. Now Union charges are levied over the whole Union, District charges on Rural Districts, County charges on the County, separate charges on special areas, and the whole is complicated by the charges made in the rates by the Local Government Act of 1898.

Before that Act the Poor Rate was paid by the tenant (except in the case of holdings valued at £4 and under, where the landlord paid), but the tenant was entitled to deduct part of the amount paid from his rent, usually half. County Cess was paid and borne by the occupier, except in the case of holdings let after the 1st August, 1870. In these cases if the holding was valued at over £4 the tenant paid, but was entitled to deduct from his rent part of the amount paid, usually one-half. If the holding was valued at £4 or under, the County Cess was paid by the landlord.

Under the Act a Grant in Aid called the Agricultural Grant, and amounting to £727,655, is made annually to the local authorities. This Grant is equal to half the combined Poor Rate and County Cess which was certified to be taken to have been raised off agricultural land in what was known as the standard financial year. The balance of the money required for purposes formerly met out of the County Cess and the Poor Rate is now provided by means of the new Poor Rate, County Cess being no longer collected *eo nomine*.

The Act was intended to secure the benefit of the Agricultural Grant in respect of existing tenancies to the landlord as regards the old Poor Rate, and to the tenant as regards the County Cess. In order to effect this it was provided that in the case of tenancies existing at the 1st April, 1899, the tenant should, in general, pay the new Poor Rate, but that the rent should be adjusted in such a way as to secure to landlord and tenant their respective shares of the benefit of the Agricultural Grant. In the case of tenancies created after the 1st April, 1899, the tenant must, in general, pay the Poor Rate, and has no right to deduct anything from his rent. Where a fair rent is fixed after the 1st April, 1899, special provision is made by Section 55 to ensure permanently to the occupier and the landlord their respective benefits from the Agricultural Grant.

1.—STATEMENT showing the POOR RATE in the £ made in the ELECTORAL DIVISIONS of the Unions which are included wholly or partly in Co. LEITRIM for the financial years ended in 1881 and 1891. APPENDIX X.

(a) The Enumeration of Emigrants from Irish Ports did not commence till the 1st of May, 1851.
(b) The nearest date to the time of the Census for which the Emigration Returns can be made up

APPENDIX X.

S.—STATE-AIDED EMIGRATION.

It may be as well to explain that under 12 and 13 Vic., c. 104, sec. 26, Boards of Guardians were empowered to apply part of the rates and to borrow money "for the purpose of defraying or assisting to defray the expenses of the emigration of poor persons."

Under the Arrears of Rent (Ireland) Act, 1882 (45 and 46 Vic., c. 47), power was given to borrow from Public Funds on easier terms for the above purposes, and the Treasury might authorise the Commissioners of Public Works to make grants to Boards of Guardians for the same purposes, the total grants not to exceed £100,000, and the sums granted not to exceed £5 for each person. These grants were confined to the nine counties, part of which are at present scheduled as congested, the Unions of Belmullet, Newport, Swinford, Clifden, and Oughterard, being specially mentioned.

Under the Tramways and Public Companies (Ireland) Act, 1883 (46 and 47 Vic., c. 43), the limit of the grant was increased to £200,000, of which one-quarter might be applied for the purpose of migrating "persons or families" and the limit of individual grants was increased to £8.

The total grants made under these sections amounted to £133,172 10*s.* 2*d.* up to 1891, when they were repealed by section 35 of the Land Act of 1891, which established the Congested Districts Board.

The following table shows the total number of State-aided emigrants from the County of Leitrim in 1883 and in 1884, and the amount of grant to each Union:—

Supplied by the Local Government Board.

V.—INFORMATION AS TO SCHEMES OF DEPARTMENT OPERATING IN CO. LEITRIM IN 1906.

The following information about some of the work of the Department of Agriculture and Technical Instruction in County Leitrim during the year 1906-7, may be of use:—

Scheme.	Estimated Cost.
	£
Agricultural Instruction, ...	350
Live Stock, ...	400
Bee keeping, ...	30
Poultry-keeping, ...	145
Butter-making, ...	110
Prizes for Small Farms, ...	105
Subsidies to Shows, ...	110

There were sixty nominations issued to Leitrim mares for service by registered sire in 1906, of which twenty-two were given to residents in the congested areas.

There were six stallion asses located in the county with the following persons:—

J. W. Caulfield, Annaghmaculla, Cloone.
John Gallagher, Lisnatulla, Ballinamire.
Bernard Winters, Corglass, Drumcong.
James Faughnan, Cattan Lake
William Meally, Drumkielvy, Mohill.
Patrick Clyne, Moher, Dromod.

The total number of bulls located in the county was eighteen, of which ten were in the non-congested portion and eight in the congested portion.

The number of premium bulls located in the county during the last six years was as follows:—

1901,	—
1902,	10
1903,	16
1904,	17
1905,	18
1906,	16

The following shows the location of the bulls in 1906:—

Yearlings.

A.A. 1. James W. Conboy, Corriwcrin, Dromahair.
H. 2. H. J. B. Clements, Lough Rynn R.S.O., Dromahair.
A.A. 3. John Doyle, Laheen, Mohill.

Two-Year-Olds.

A.A. 4. Patrick Rynn, Drumristin, Dowra.
A.A. 5. Robert McGloin, Largydonnel, Manorhamilton.
S.H. 6. Patrick Kerrigan, Currycramp, Dromod.
A.A. 7. John McGovern, Derryhallow, Drumshambo.

Three-Year-Olds.

S.H. 8. Francis O'Hara, Unshina, Ballinamore.
S.H. 9. Andrew McGowan, Drummonds, Manorhamilton.
A.A. 10. William Hunt, Clooncumber, Dromod.
A.A. 11. William Jones, Laheen, Mohill.
A.A. 12. Francis Lawrence, Aughadrumderg, Mohill.

Four-Year-Olds.

S.H. 13. Luke Deane, Glebe, Garadice, Ballinamore.
S.H. 14. James W. Conboy, Carrowcrin, Dromahaire.
A.A. 15. Robert Notley, Aughamore, Dromod.
S.H. 16 Wm. A. Crowe, Listadnan, Lough Rynn, Dromod.

There were eleven boars in the county in 1906, of which four were in non-congested districts.

The number in the county during the last six years was as follows:—

1901,	—
1902,	1
1903,	—
1904,	1
1905,	7
1906,	7

The boars were located in 1906 as follows:—

First Year Premium Boars.

1. William Melia, Drumkielvy, Mohill.
2. Cornelius Ryan, Cloontumpher, Dromod.

Second Year Premium Boars.

3. Mrs. Eliza Reynolds, Corlough, Drumshambo.
4. Patrick M'Loughlin, Drumkeelan, Drumshambo.
5. James Cosgrove, Beagh, Dromahaire.
6. Thomas Doherty, Drumdoo, Mohill.
7. James Faughnan, Cattan Lake, Annaghmore, Mohill.

The number of egg-distributing centres in 1906 was sixteen, of which seven were in congested areas. The centres were as follows:—

1. Mrs. A. Johnston, Cornagee, Tullaghan.
2. Mr. John McDermott, Cornstalk, Manorhamilton.
3. Mrs. Bridget Fox, Monakill, Manorhamilton.
4. Mr. John McCowan, Corderry, Killargue.
5. Mrs. B. Tate, Cherrybrook, Manorhamilton.
6. Mr. Myles McKeown, Derrahimsk, Rossinver, Garrison.
7. Mrs. Bernard Moran, Aughamore, Dromod.
8. Mrs. Farrell, Leddy, Keshcarrigan.
9. Mr. Owen McHugh, Druma, Finnila, Dowra.
10. Mr. Alexander McAdam, Killaneen, Ballinamore.
11. Mrs. Francis O'Rorke, Mullinadarragh, Carrigallen.
12. Mr. Patrick Wrynn, Drumharkin, Foxfield, Carrick.
13. Mr. John Donnelly, Cloondrumminmore, Foxfield.
14. Mr. J. W. Conboy, Carrowcrin, Dromahair.
15. Mrs. Sala McTernan, Coolgrain, Dowra.
16. Mr. Charles Donnelly, Killaglasheen, Ballinamore.

The number of turkey-raising stations in Leitrim in 1906 was fourteen, of which seven were in congested districts. The stations were as follows:—

1. Mrs. A. Johnston, Cornagee, Tullaghan.
2. Mrs. B. Tate, Cherrybrook, Manorhamilton.
3. Mrs. Anne McTernan, Creevelea, Drumkeeran.
4. Mrs. Farrell Leddy, Drumaragh, Keshcarrigan.
5. Mrs. Gilronan, Kilmore, Ballinamore.
6. Mr. Alexander McAdam, Killaneen, Ballinamore.
7. Mr. Thomas Moran, Drumriggan, Mohill.
8. Mr. John Donnelly, Cloodrumminmore, Foxfield.
9. Mr. Patrick Wynn, Drumharkin, Foxfield.
10. Miss Katie McKeon, Derrahimsk, Ballaghmelham, Rossinver.
11. Mrs. Patrick McLoughlin, Drumkeelan, Drumshambo.
12. Mrs. John Ward, Gortinty, Drumsna.
13. Mrs. Alice McCabe, Dohern, Carrigallen.
14. Mr. Patrick Clyne, Moher, Dromod.

APPENDIX X.

W.—NOTE ON MIGRATORY LABOURERS.

The special characteristics of the temporary migration of agricultural labourers from the congested districts, which distinguish it from apparently similar movements of labour in other counties and from the ordinary examples of the mobility of labour in other trades, have been briefly discussed in the Donegal Statistical Abstract (See Appendix to Second Report of Commission, Cd. 3319, 1907, pp. 314-5). The total number of persons (including females) who had temporarily migrated from Ireland or who at the time of the collection of the Agricultural Statistics in 1905 had expressed their intention of subsequently migrating was 15,286. Of these only 160 were resident in County Leitrim. Of this number only 34 were landholders, but of the landless labourers 107 were the sons of landholders who worked on their parents' farms when at home. The following Table taken from the Annual Report of the Department of Agriculture on Irish Migratory Labourers for 1905 (page 45) gives further information on the subject.

Poor Law Union.	Number of Migratory Agricultural Labourers not Landholders.	Number of Migratory Agricultural Labourers having Land, and Area of their Holdings.												Total Number of Migratory Agricultural Labourers	Where Employed.			Number of Migratory Agricultural Labourers who had not left their homes at the time of the Inquiry, included in foregoing Columns.
		Not exceeding 1 acre.	Above 1 and not exceeding 2 acres.	Above 2 and not exceeding 3 acres.	Above 3 and not exceeding 4 acres.	Above 4 and not exceeding 5 acres.	Above 5 and not exceeding 10 acres.	Above 10 and not exceeding 15 acres.	Above 15 and not exceeding 20 acres	Above 20 and not exceeding 25 acres.	Above 25 and not exceeding 30 acres.	Above 30 and not exceeding 40 acres.	Above 40 acres.		In England.	In Scotland.	Elsewhere in Ireland.
